OUR ADVICE IS PERSONALIZED SO YOU CAN MAXIMIZE YOUR PRODUCTIVITY.

We will find exactly the right solution for every stage of your production process.

In industrial manufacturing, everything revolves around maximum productivity. If you are wondering how to achieve this, just ask us. You will receive professional advice tailored to your business - so that together we can find the perfect solutions for your project as well as the right product from our comprehensive range of machining tools and clamping technology. We can also offer you new approaches when it comes to use: innovative digital solutions make your production system more transparent and efficient.

We set the standard when it comes to making procurement simple. We create the right eBusiness solutions for you, meaning you can buy your quality tools with ground-breaking simplicity.

We offer personal, customized service online and in-person so you can stay focused on your projects.

OPTIMIZE YOUR PROCESSES. WITH OUR SOLUTIONS.

We support you every step of the way.

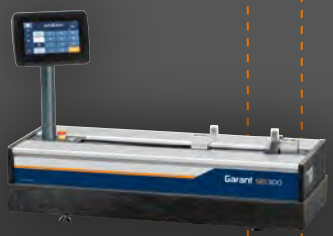
GOODS DISPATCH

LOGISTICS / PACKAGING

INSTALLATION

HCT

Hoffmann Group Connected Tools:
Bluetooth®-capable measuring tools and an innovative HCT app for quick documentation and data transmission.



GARANT Setting Bench:
85% time savings when setting measuring tools.

GARANT vibratoryfinishing machine GMT35:
Reduce your process and production times thanks to automatic reworking of your workpieces.

QUALITY ASSURANCE

Our eShop:
Save valuable time during ordering while enjoying maximum flexibility.

The availability of our products differs across regions. Simply contact us.

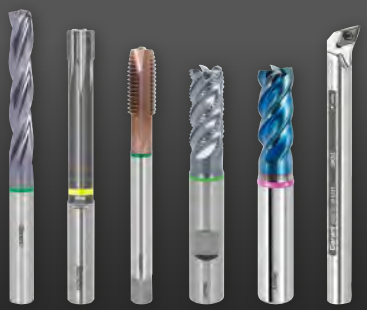
QUOTE DRAFTING

ORDER PLANNING

GARANT industrial vending solutions:
Ensure efficient C-parts management and goods or tool issuing.

WORK PLANNING

GARANT VG1 pre-setting device:
Guarantees efficient and precise measurement and pre-setting of machining tools.



GARANT Master range:
Our best drilling, thread-cutting, milling and turning tools. For high demands in different materials and applications.

PRODUCTION

SIMPLY AT A GLANCE: OUR RANGE. FOR YOU.

These are our products, solutions and services – simply everything to make you even more successful.

A top range of selected tools, best price-performance ratio

- **Approx. 120,000 state-of-the-art quality tools** carefully pre-selected for you.
- Product management available around the **world**.
- Catalogue available in **17 languages**, in printed form, online and as an app.

Personal, flexible and digital services

- eTool
- ToolScout
- Regrinding service
- Calibration service
- Workstations and storage planning and installation
- Textile customisation
- Wear test support and measurement
- Protection plans
- Connected Metrology

Maximum reliability

- **99% Availability of products** (excluding projects)
- **Perfect delivery accuracy.**
- **95%** of our customers class us as a preferred supplier.

Efficient eBusiness solutions

- eShop for **quick and secure ordering**.
- **Electronic catalogue** in 17 languages.
- simple system – **procurement market place** for C items with over 80 million items.
- Electronic data interchange for efficient business processes.
- GARANT Tool24 and HOLEX 24seven industrial vending solutions.

Hoffmann Group

Competent support team

- **Throughout** Europe.
- Consistent support from field sales, key account managers, application technicians, metrology technicians, technical advisers for workstations and storage, technical advisers for occupational safety, eBusiness experts, technical advisers in internal sales.
- A total of **more than 1,400** qualified and motivated technical advisers.

Garant Our system brand

- **The range:** More than 55,000 top certified tools of the highest quality for all application areas.
- **GARANT expertise:** Developed with users, suppliers and 12 of our own technology centres.
- **A success story:** At your side every day for more than 50 years, and recognised with more than 55 awards.
- **The quality promise:**
  10-year warranty on GARANT products.*

Market leader for quality tools

- **Number 1** in Europe.
- **Global** availability.

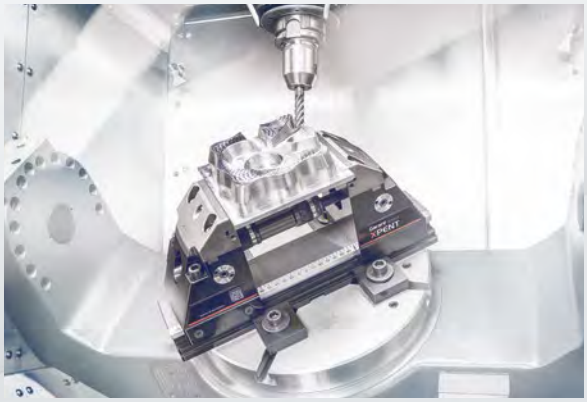
HOLEX Our quality brand

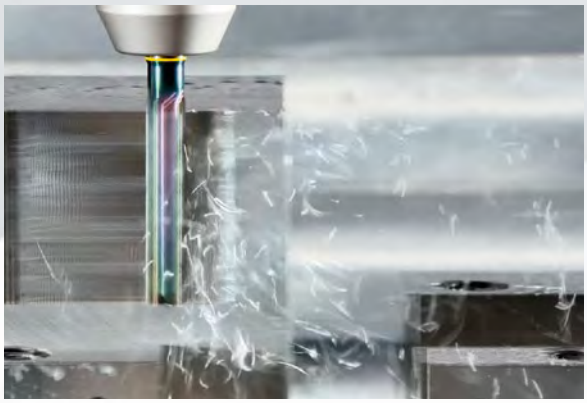
- **A wide range:** More than 17,000 tools forevery standard application.
- **Focus on functionality:** Exactly those products that you really need.
- **Solid and proven:** Industrial quality for everyday use.

* 10-year warranty on materials and manufacture of GARANT products when used as intended, excluding regular wear as a result of mechanical stress and excluding workstations and storage solutions installed in containers as well as all electronic components.

WE CAN HELP YOU SET UP YOUR MACHINING PROCESSES FOR LONG-TERM SUCCESS!

We are industry experts. This means we always have a solution that is right for you. Everything to make your everyday work easier, save money, and increase productivity in the long run.

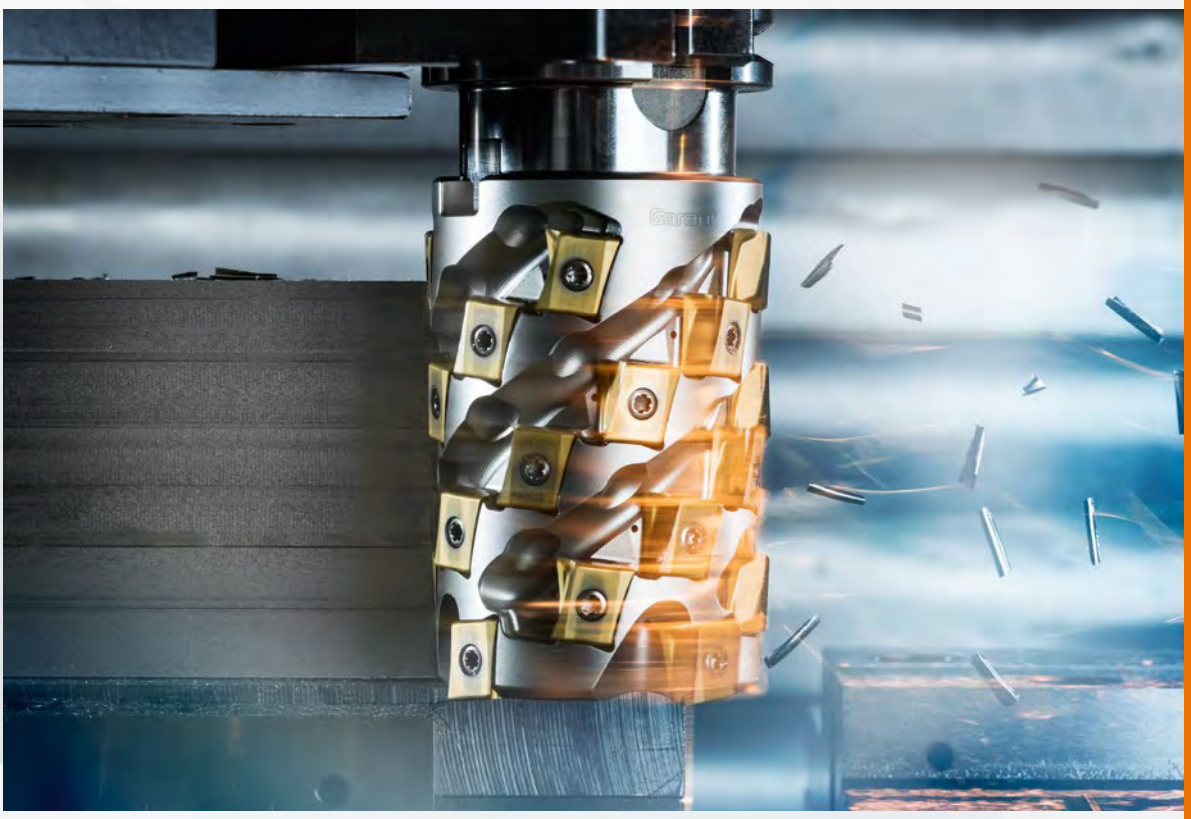




Good advice just for you:

Expert knowledge from machining specialists

- Our **application technicians** are specialists for **boring, milling** and **turning**, as well as **clamping technology.**
- **Valuable expertise** on the use of high-quality cutting edge technologies and clamping technologies.
- **Innovative solutions** for improving the production process.



Garant

MY MOST ACCURATE COLLEAGUES WHEN IT COMES TO MACHINING.

GARANT machining and clamping technology will make your production work processes faster and more reliable. With systematic, intelligent solutions.

Sophisticated systems for greater efficiency

- **GARANT Softcut:** high-precision shoulder mill with irregular pitch for very smooth cutting. High-performance inserts, ideal for general-purpose use in all material groups and automated production lines.
- **GARANT HB7020-2:** high-performance turning grade for machining steel, designed for maximum productivity.
- **GARANT X-Team:** powerful clamping technology for systematic 5-axis processing.

More than 55,000 certified system-based tools for all application areas in the highest quality (VDA 6.4; ISO 9001) provide systematic solutions for your workplace. GARANT tools stand for the utmost reliability. This is why we also provide a 10-year warranty on all GARANT products.*

Industrial Tooling & Equipment by Hoffmann Group

GERMAN DESIGN AWARD WINNER 2020

DESIGN AWARD 2018

* 10-year warranty on materials and manufacture of GARANT products when used as intended, excluding regular wear as a result of mechanical stress and excluding all electronic components.

HOLEX

SO CLEVER – PLUG & PLAY FOR THE MACHINING PROCESS.

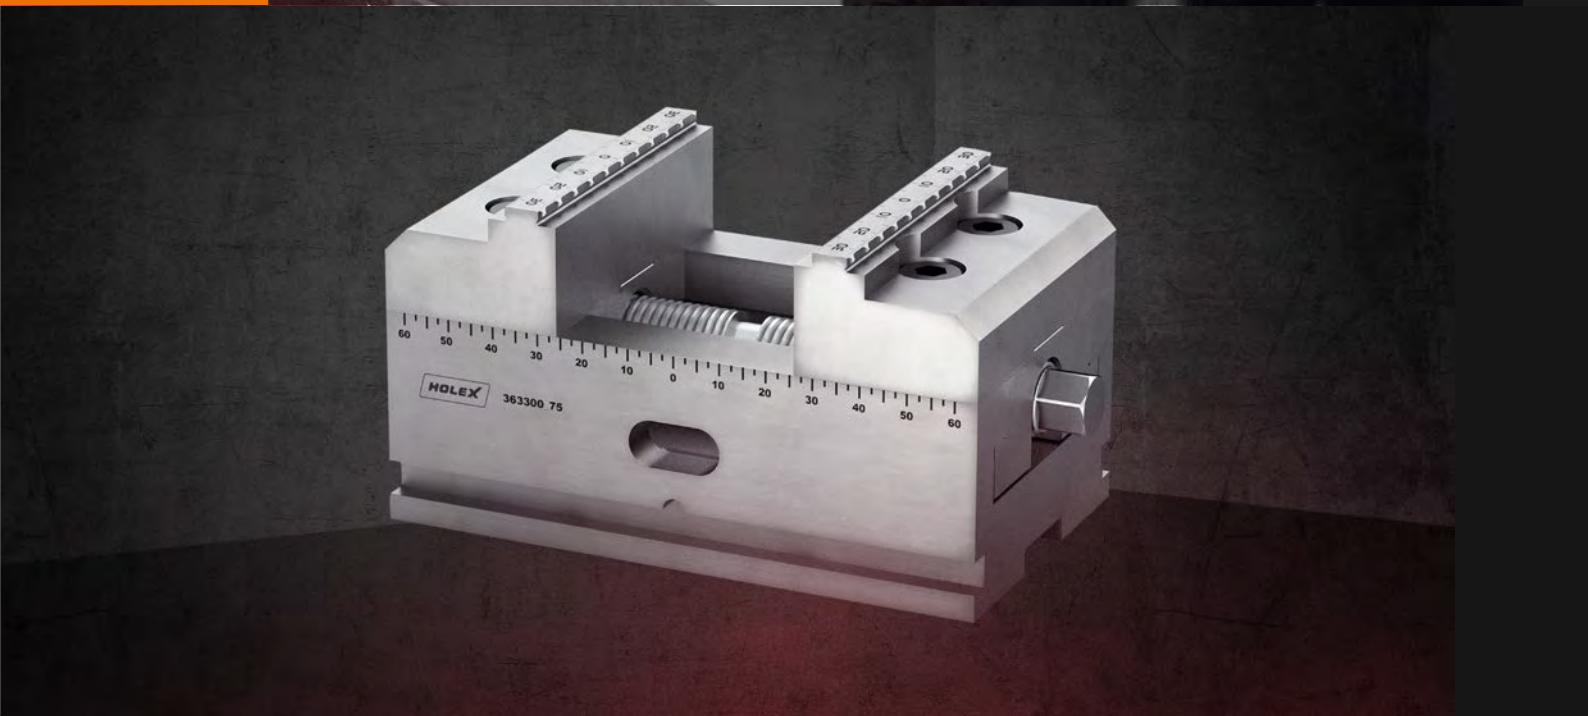
The intelligent solution for everyday production work: HOLEX machining and clamping technology. Clever, authentic tools that always work. Without compromise. Reliable.

Simply clever machining

- **HOLEX Clever Tap:** Sturdy tap for conventional standard applications.
- **HOLEX Pro toolholder:** Targeted cooling on the cutting edge.
- **HOLEX centring vice:** Clamps blanks and finished parts with the least possible lifting of the jaws/component, very good accessibility and exactly symmetrical.

More than 17,000 products for day-to-day working life: HOLEX has the right products for every standard application at a great price and good industrial quality.

Industrial Tooling & Equipment by Hoffmann Group



HOLEX
363300 75

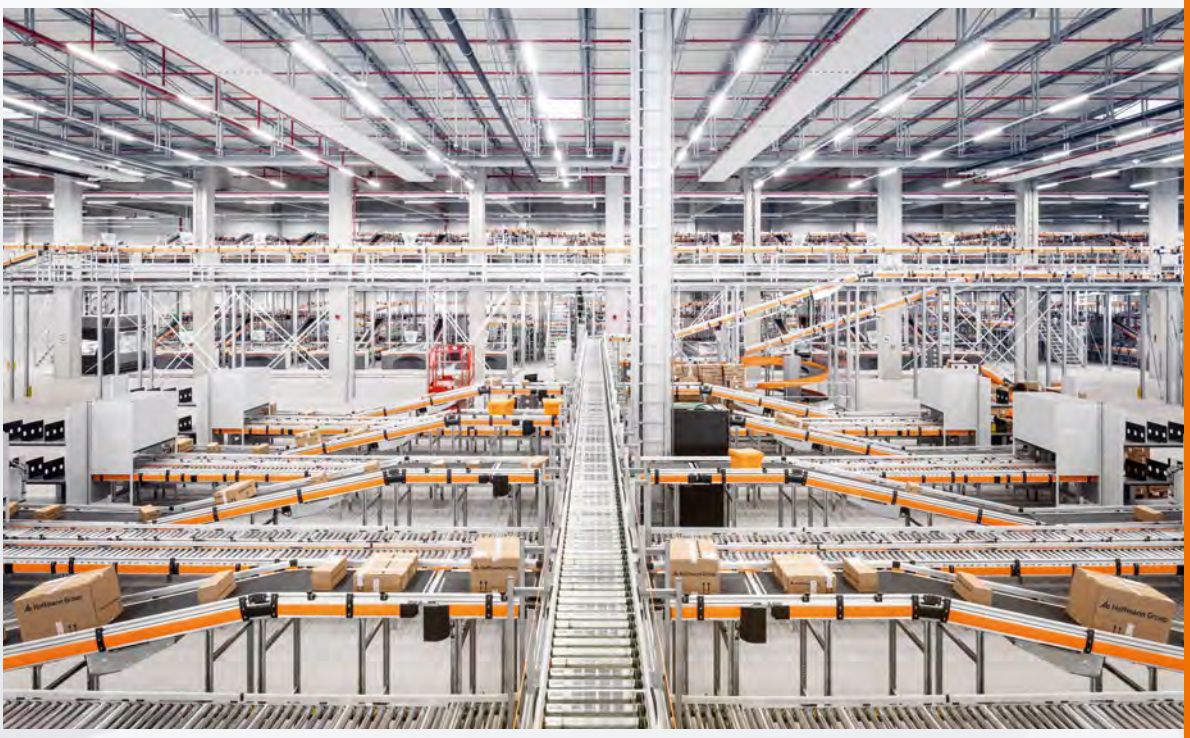
WHEN IT COMES TO PURCHASING TOOLS AND EQUIPMENT, WE GIVE YOU PEACE OF MIND.

Your success builds on everything running smoothly in procurement. We ensure this happens with the highest delivery capability and perfect delivery accuracy.

We believe delivery capability is a big deal.
Which is why we are building big, too

To be able to supply you with goods reliably in the future, we have created something big: LogisticCity – the most powerful tooling logistics solution.

LogisticCity is a crucial step towards networked digital logistics which fully exploits the technological opportunities available today. This reliably ensures our outstanding delivery performance for you on a long-term basis, even in times when we have to react constantly to changing market conditions.

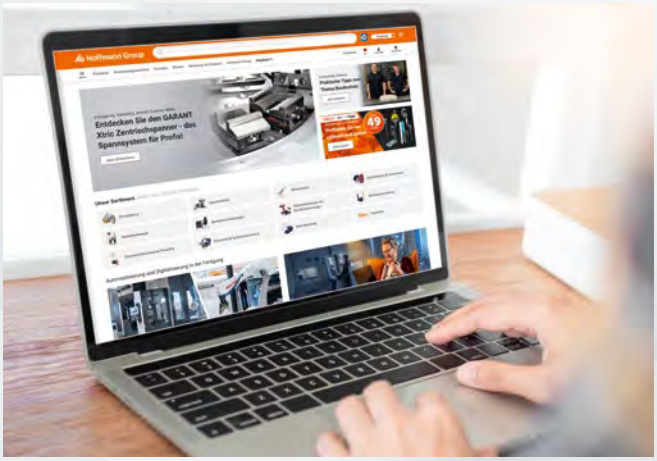


Hoffmann Group LogisticCity:
Taking logistics to the next level

- **100,000 m²** of logistics area, fully automatic warehouse with **500,000** container and **30,000** pallet spaces, **14 kilometres** of conveyor systems, **40,000 packages** a day.
- **TechnologyCenter** and **ServiceCenter** for calibration, regrinding, textile customisation and laser labelling.
- Ships within 24–48 from ourlocal warehouse (ground to most states); 3–4 business days from LogisticCity in Germany.
- LogisticCity, **Europe's largest tool logistics centre** in Nuremberg.
- Numerous logistics sites **worldwide**.

SIMPLE, FAST AND RELIABLE PROCUREMENT.

Take advantage of our procurement solutions to optimize your processes. We will be happy to advise you and find tailored solutions perfectly matched to your needs.



Our eShop:
Intuitive, flexible and fast

The simple way to **order online** and **request quotations**.

All functions at a glance.
www.hoffmann-group.com

Electronic catalogues:
Tailor-made content and prices

Our range of **the very latest quality tools** is put together especially for you.

Find out more.

Catalogue browser app:
All products on your smartphone or tablet

Quick browsing and **effective** searching – wherever and whenever you like, even offline.

Ask us about **worldwide** regrinding and re-coating solutions for your cutting tools.
Within **Europe,** we can assess technical feasibility and economic viability of tool reconditioning for you.
If reconditioning is no longer viable, we mark your tools and send them back to you **at no extra cost**.
You can find out more at: **http://ho7.eu/regrinding**

The following tools can be reground by our regrinding service within **the European area**:

- Drills from ∅ 2mm
- Milling cutters from ∅ 4mm
- Reamers from ∅ 3mm
- Countersinks and circular saw blades

The following tools **cannot** be reground:

- Tools with diamond coating
- Routers
- Band saw blades

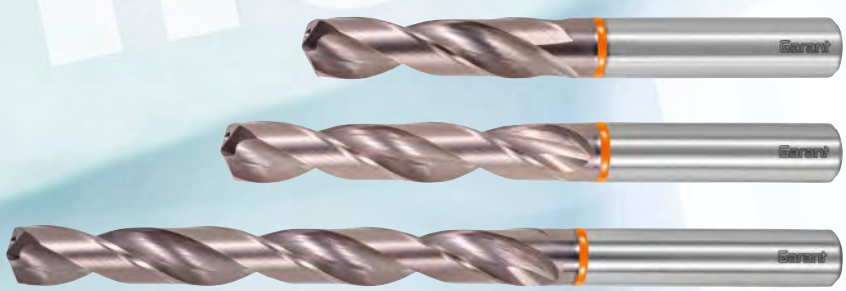
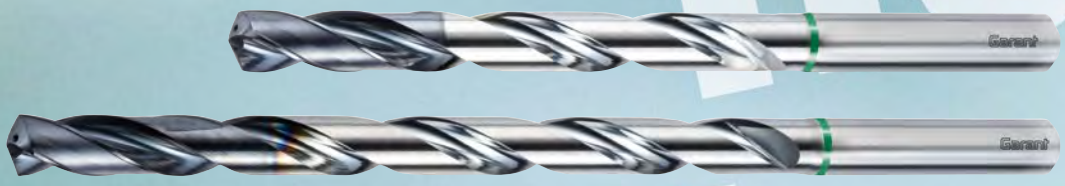
Garant UNI HERO



Pages **96 / 118 / 132**

GARANT Uni Hero solid carbide multi-purpose drill 4×D, 6×D and 8×D
- Maximum universality and tool efficiency.
- Convex-concave main cutting edges and special pointed tip.
- Optimised chip groove geometry and polished flutes for optimum chip evacuation.
- Ultra-smooth, latest-generation TiAlSiN high-performance coating.

Garant MASTER STEEL



Pages **135 / 142**

GARANT Master Steel solid carbide high-performance drill 8×D and 12×D
- Extremely sturdy tool design and optimised special point geometry.
- Patented face geometry for optimum chip formation and reliable chip breakage.
- Special flute geometry for reliable chip evacuation.
- High performance with a focus on steel materials.

Pictograms and graphics

Version

Tool material

- HSS E — High-performance tool steel with 5 % cobalt
- HSS E-PM — Powder metallurgy HSS
- Solid carbide — Micrograin solid carbide in the range K10-K40 and P40
- HSS E-SPM — Special powder metallurgy substrate with high cobalt content

Type

- Type N — Type N = Standard
- Solid carbide router cutter with high performance diamond cut
- HR — Fine knuckle form
- Left-hand cutting

Standard

- DIN 206 B — Satisfies DIN 206
- EN 22568 — Satisfies Euro Standard 22568
- Standard — Manufacturer's standard
- DIN 371 — Satisfies DIN 371

Shank

Solid carbide drill and milling cutter with shank DIN 6535-HA (from shank ∅ ≥ 6 mm) on request with drive flat HB or HE:

Please note the respective instruction text concerning the desired cutting tool.
Required: 1 × drill No. 122659 size 10 with HE drive flat:
Ordering example: 1 pc. No. 12 2659 size 10 +1 pc. No. 12 9100 HE

Generating a drive flat: Made to order – cannot be returned.

- h6 DIN 1835 B — Shank in h6 tolerance with DIN 1835-B drive flat
- h7 — Tolerance h7 shank with 3 drive flats for use in a 3-jaw chuck

Diameter/ length

- x — Nominal diameter divergent from standard Dc **Semi-standard**
- 25×D — Flute length 25× ∅ (deep hole drill)
- 4×D — Indexable drill 4×D

Angle

- 180° — Stepped tool for 180° countersink angle
- 90° — Insert NC spotting drill 90°
- 60° — Countersink with 60° point angle
- 90° — Counterbore
- 118° — 118° point angle
- 90° — High-accuracy tool tolerance in the µm range
- ≠ — Dynamic helical pitch
- 45° — Corner chamfer width at 45°
- R — Defined corner radius
- r_v — Corners rounded off

Form / teeth

- Special drill tip – for aramide fibres
- 3 — Tool with 3 teeth
- Form C
- High-performance drill with 6 guide chamfers and IC
- ≠ — Countersinks with unequal spacing for precision counterbores

Threads

- MF — Metric fine threads
- EG-M — Metric thread for wire inserts
- 60° — With 60° flank angle
- CS — 2-3 pitch chamfer lead Form C **with spiral point**
- ≤3×D — For through holes up to 3×D thread depth

Note on the use of taps with coolant holes on synchronised spindles:
For optimum lubrication (for longest service life and highest process reliability) using cutting oil or MQL, we recommend GARANT quick-change tapping heads with minimum quantity lubrication system and minimum length compensation (MLA) No. 33 8100 – 8121.

- Voll-profil — Creates a full profile
- **Dynamic.** Cost-effective machining for highly demanding work.
- **Synchronous.** Very high performance, for use on machines with synchronised spindles.
- ≠ — Thread mills with unequally spaced cutting edges

Tolerance

- H7 — For manufacturing to fit H7
- ISO 2 6H — Metric ISO threads application class 2 6H = medium tolerance
- m7 — Cutter ∅ tolerance m7
- −0.007 +0.002 — Cutter ∅ tolerance dimensioning

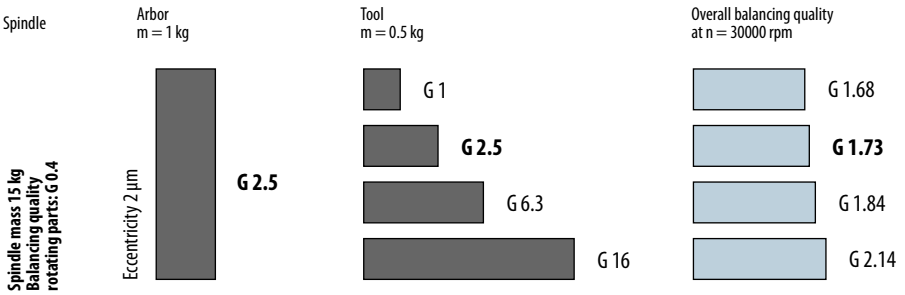
Application

- HPC — **High Performance Cutting** for very high machining volumes
- MTC — **Multi Task Cutting** MTC tool with cutting force reduction
- TPC — **Trochoidal Performance Cutting** A synthesis of a HPC and MTC tool
- Pilot hole and co-pilot hole required
- 25 bar — With internal coolant supply at 25 bar minimum pressure. **For drills from 12×D a filter with 20 – 25 µm must be used in the coolant system.**
- Centre hole
  - Use half feed rate
- Aperture:
  1. Drill the outer holes,
  2. Drill intermediate holes, offset maximum 0.8×D
- Drilling through cross holes
- Cross drilling
  - Use half feed rate
  - Cross bore maximum 1/3 of the bore ∅
  - Eccentric cross bores not possible

Balancing quality

G 2.5 n_{max} — **Milling cutter with balancing quality G 2.5** maintained up to the stated speed n_{max} (as shown on the shank marking).
Adequate balancing quality of the overall tooling system (arbor and tool) is important at high speeds.
The diagram shows examples of the relationship between various balancing qualities and the resulting overall balancing quality.

Example: Arbor G 2.5 + tool G 2.5 = overall balancing quality G 1.73



For more information see machining handbook No. 11 0010

Note: Precondition for achieving an overall balancing quality ≤ G2.5 is a balanced toolholder with a balancing quality G2.5.

slot milled from solid	Side milling	Trochoidal	Copying
a_e = 1×D	a_e = 0.5×D	$a_{e\,max}$ = 0.2×D	a_e = 0.05×D

Uniform depth of cut a_p: (for variations see notes)

a_p = 1×D	a_p = 1×D	a_p = L_c	a_p = a_e

Note: For longer tool life and optimum results, we recommend for milling cutters with Ø ≤ 4 mm: a_p = 0.5×D.

ISO fits and tool overview for drilling

Tolerances and fits

In addition to the general ISO standards for describing the geometric tolerancing and quality of surfaces, the **ISO system of fits** is a basic requirement for components to work smoothly together.
A distinction can be made between **general tolerances according to ISO-2768**, **ISO tolerances** and **freely toleranced dimensions**.
In this case, the respective tolerances define the permissible deviations from nominal dimensions.

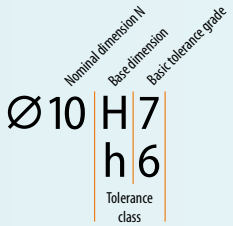
Zero line
Nominal dimension of the hole or shaft,
Reference value for tolerance and dimension.

Dimensional tolerance
Difference between maximum and minimum.

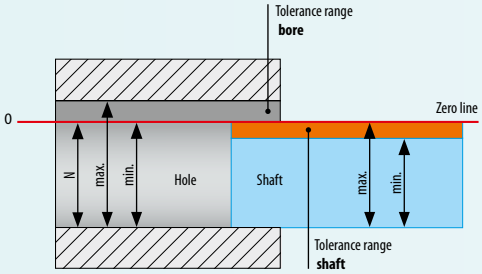
Basic dimension
Displays the position of the tolerance zone in relation to the zero line. Example for hole **H**

Basic tolerance grade
Specifies the basic tolerance range: Example: **IT7**

Tolerance class
Limit deviation in µm (combination of basic dimension and tolerance grade) Example: Hole **H7**

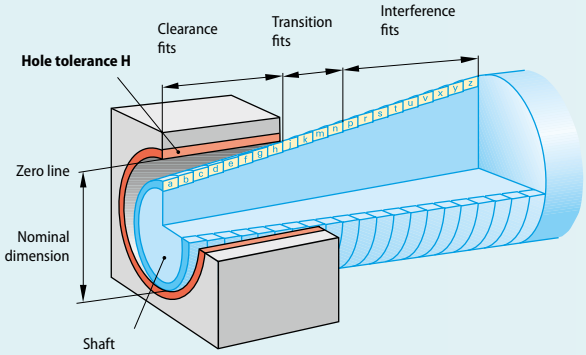


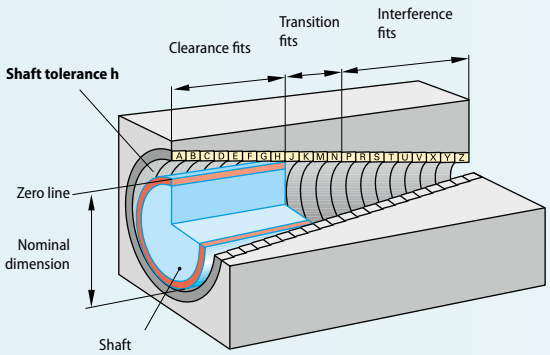
Ø 10H7	Bore maximum	10.015
	Bore minimum	10.000
	Tolerance of bore	0.015
Ø 10h6	Shaft maximum	10.000
	Shaft minimum	9.991
	Tolerance of shaft	0.009



ISO system of fits, standard bore and standard shaft

Systems of fit for optimised, cost-effective production. The basic idea is to produce one of the associated workpieces in a standardised manner and to transfer the appropriate tolerance to the other workpiece. Typical applications include shaft-hub connections.





Standard bore holes system (see DIN ISO 286-1)

The tolerance for the **hole diameter** is standardised **with a H tolerance class** based on the IT Grade system. The minimum dimension of the hole goes exactly up to the zero line and the maximum dimension of the hole is limited upwards by the tolerance grade (example 10H7 - Ø max: 10.015/ min: 10.000). A tolerance field position is selected as required for the counterpart (shaft).

Standard shaft system (see DIN ISO 286-1)

An **h tolerance class** is provided for **the shaft diameter**. The maximum dimension of the shaft goes exactly up to the zero line and the minimum dimension of the shaft is limited downwards by the tolerance grade (example 10h6 - Ø max: 10.000/ min: 9.991). The counterpart (hole) then receives an individual tolerance zone.

The IT basic tolerance grade

In the ISO tolerance system, the tolerance grade (e.g. IT7) defines the accuracy level (basic tolerance).
The range up to IT11 is decisive for tool making and mechanical engineering.

Nominal dimension (mm)		Finish machining (grinding, lapping, honing)							Tool, machine and vehicle construction (reaming, milling, drilling, turning)					
		Basic tolerance grades												
		IT01	IT0	IT1	IT2	IT3	IT4	IT5	IT6	IT7	IT8	IT9	IT10	IT11
More than	Up to and including	Basic tolerances µm												
–	3	0.3	0.5	0.8	1.2	2	3	4	6	10	14	25	40	60
3	6	0.4	0.6	1	1.5	2.5	4	5	8	12	18	30	48	75
6	10	0.4	0.6	1	1.5	2.5	4	6	9	15	22	36	58	90

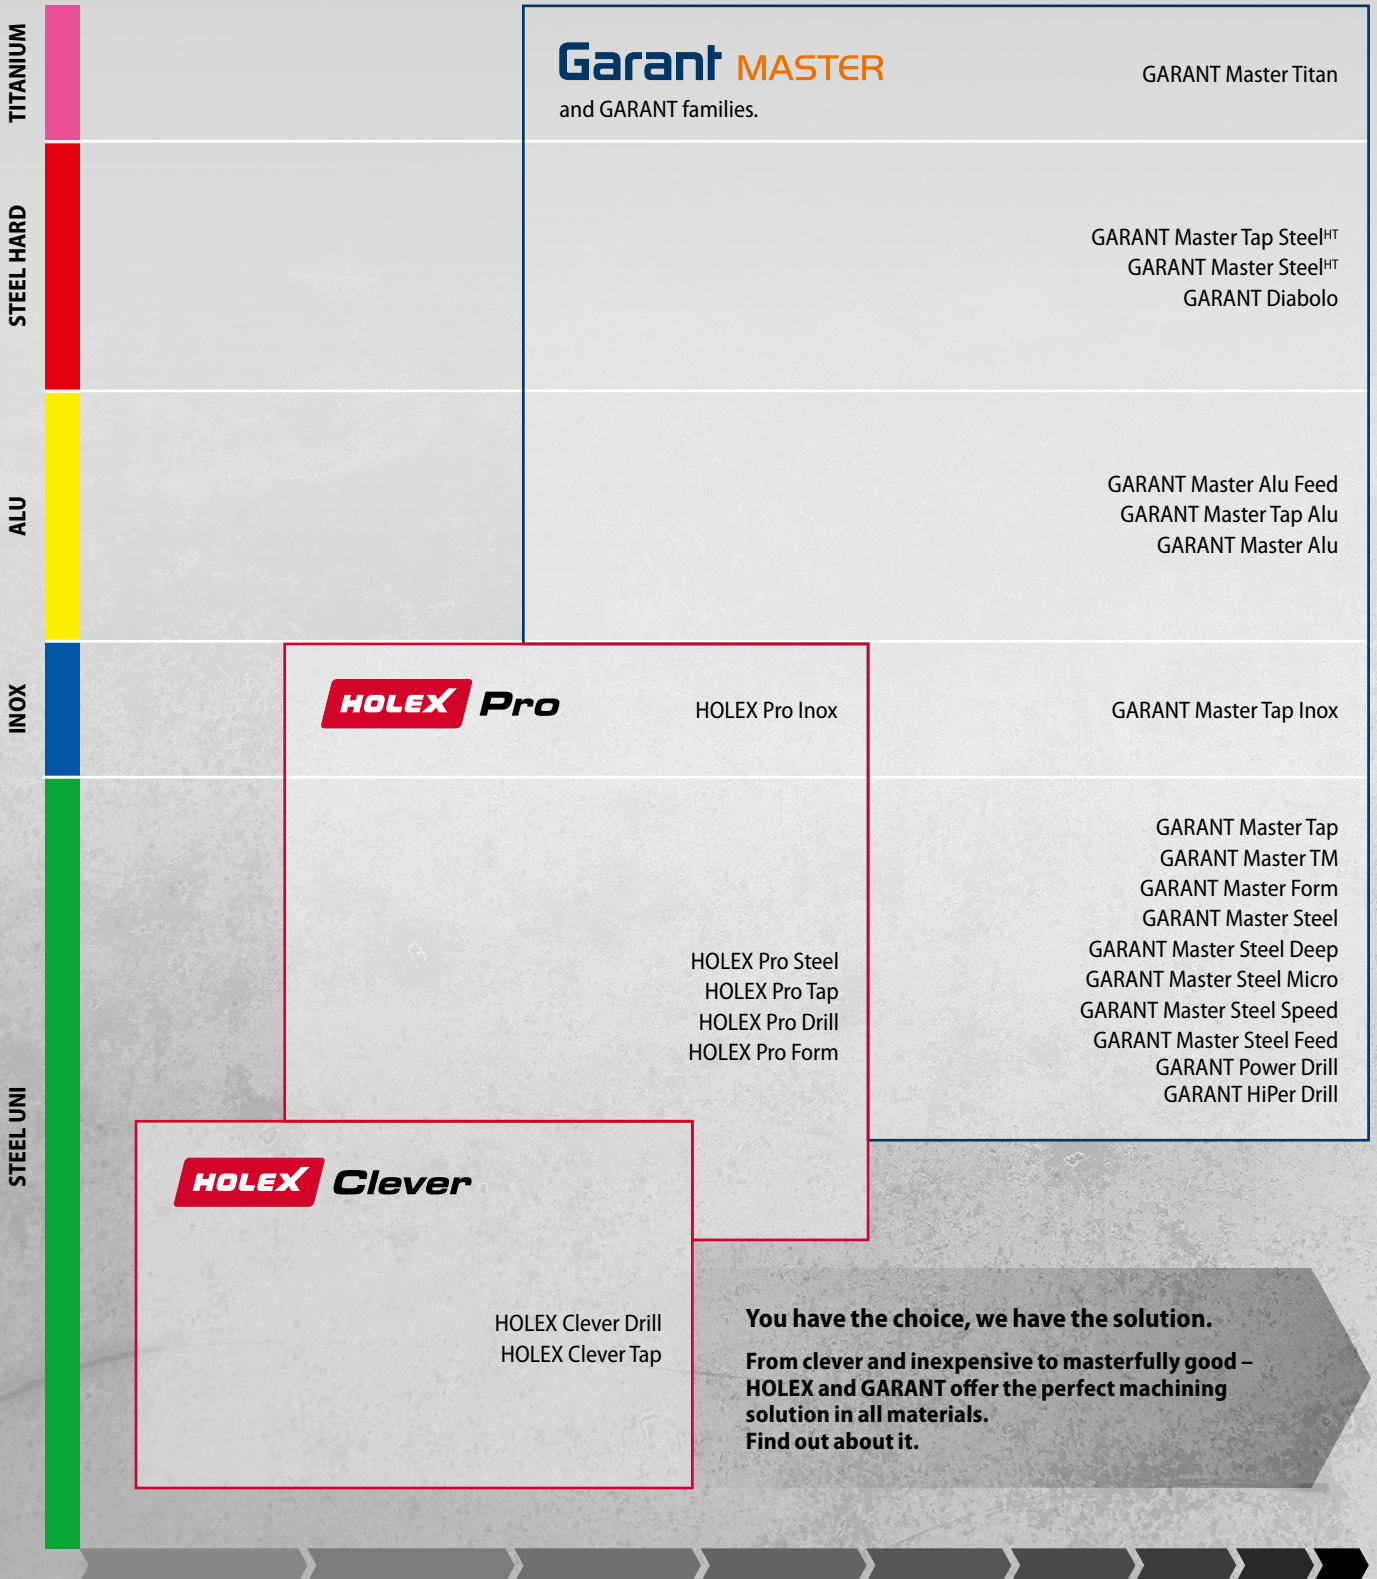
ALWAYS THE PERFECT SOLUTION ...

The GARANT and HOLEX product ranges always offer the perfect tool for any bespoke requirements.

- The outstanding features of the top GARANT Master quality include the highest process reliability, performance and the best tool life.
- Our HOLEX product lines are synonymous with conventional and economical machining.



... FOR ALL MATERIALS.

HOLEX Clever

Tried-and-tested brand quality with the best value for money

STEEL UNI

HOLEX Pro

For efficient machining in a wide range of materials. The sophisticated performance and very good wear resistance result in **high cost efficiency**.

STEEL UNI INOX

Garant MASTER

The all-rounders

Ideal for steel processing, these multi-talented products also deliver excellent results in many other materials. High feed rates and smooth running, **excellent performance** and the best tool life – these are the hallmarks of the innovative GARANT Master range.

STEEL UNI STEEL UNI

The specialists

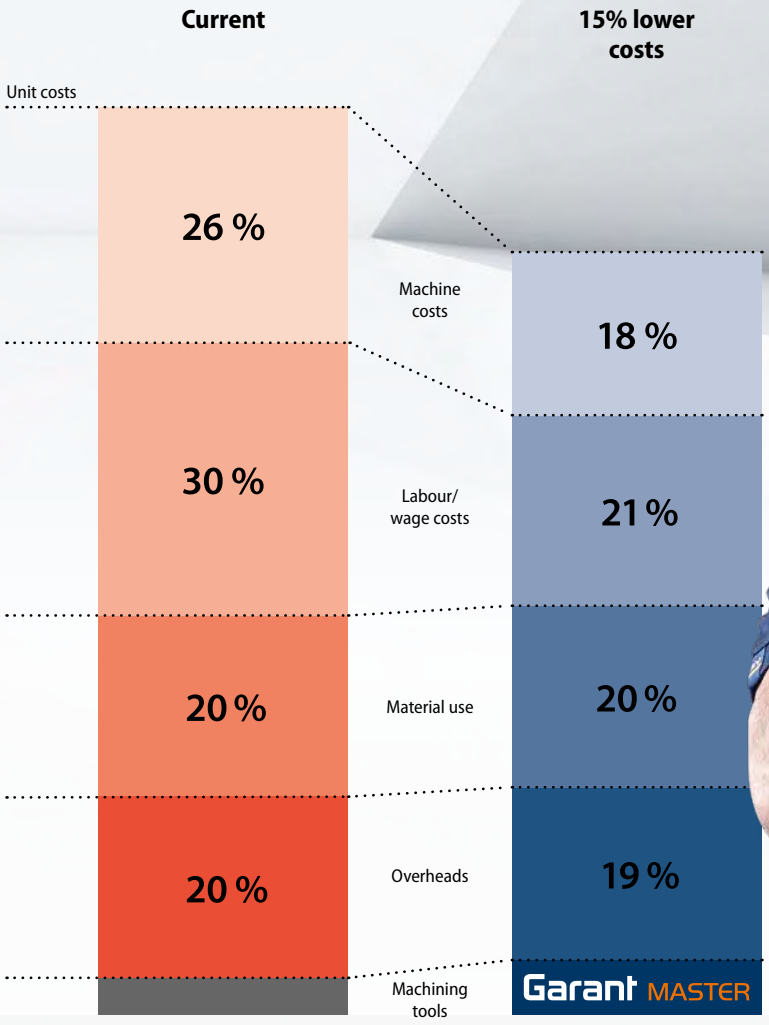
Cutter geometries that are **individually designed for demanding materials** and perfectly matched coatings ensure the highest level of process reliability in any situation.

INOX ALU STEEL HARD TITANIUM

The potential applications and uses in each case are detailed on the product pages.

Garant MASTER INNOVATION THAT MAKES A REAL DIFFERENCE.

Given that the price of the tool only makes up a small proportion of the overall costs, even significant price reductions will not noticeably reduce the overall costs.
In contrast, the uncompromising dynamics of GARANT Master machining tools **optimise the machining time and material use** and help bring about significant improvements under corresponding operating conditions.



Standard tool without improved efficiency.

Even a 30% reduction in the tool purchase price **reduces unit costs by 1.5% at most.**

GARANT Master for maximum productivity.

GARANT Master machining tools reduce unit costs by up to 15% thanks to:

- **Longer** tool life → less time spent changing tools.
- **Higher** metal removal rate → higher productivity.
- **Improved** cutting parameters → more efficient machines.

Garant MASTER

- **Comprehensive range –** drilling, countersinking, reaming, thread machining and much more.
- **Protection against wear,** even at high temperatures, thanks to high-quality coatings.
- **Optimum bending strength and toughness** thanks to high-performance substrates.
- **Reliable chip evacuation and optimum metal removal rate** thanks to optimised cutting edge and flute geometries.

Garant MASTER + Automation

- Increased machine capacity thanks to additional unstaffed shifts.
- Free employees from routine tasks / no overtime in the event of order peaks.
- Reduce manufacturing costs.
- Increase profit.

Conclusion: An additional automation solution significantly increases the potential savings once more! We would be pleased to show you how it works. **Simply contact us!**

HSS	DIN 333	Type R	k12	60°		h7

Garant Centre drill

Ground from solid and relief ground, spiral fluted.
Centre drill with radius form R:

- The radius curve eliminates the sharp transition from drill point to countersink angle that is present on form A, so the risk of fracture is reduced.
- In the event of angular misalignment of the lathe centre, the ring bearing face avoids the component running only on the external or internal edge of the bearing face. Even if the lathe centres are not in line, good support is provided.
  Size 0,5–0,8 – Single-ended.

DIN 1897 | Type FS | h8 | 38° | 2

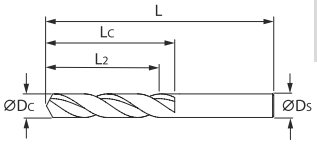
≤ 3.9 mm ≥ 4 mm

11 3020

HSS E 135°

11 3140

HSS Co8 130°



Garant **Stub drill plain shank**

Particularly **robust and strong** due to **strengthened core.**
Ground flutes, with high concentricity.

11 3020 – Bright finish flutes, nitrided lands.

Advantage: **Ideal for drilling shallow holes (approx. 2 - 4×D)** on NC machines and automatic machines.

Recommendation: **Maximum drilling depth:**
$L_2 = L_c - 1.5 \times D_c$.

HSS E | DIN 1897 | h8 | 2

Garant High performance stub drills

High concentricity and **special chip flutes** ensure precise bores.

Advantage: **Ideal for drilling shallow holes (approx. 2 - 4×D)** on NC machines and automatic machines.

Recommendation: **Maximum drilling depth:**
$L_2 = L_C - 1.5 \times D_C$.

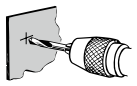
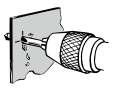
HSS | DIN 1897 | h8 | 135° | 2

HOLEX Sheet metal drill plain shank



Drill positioning without centre punching.



No material deformation due to easy drilling without pressure.

Extremely break-resistant due to short helix and strong core taper. Self-centring point. **Cylindrically ground on circumference**(without chamfers) to prevent jamming.
Vaporised surface.
Dimensions similar to DIN 1897.

Application: **Especially for drilling sheet metal.**

HSS E | DIN 338 | Type N | h8 | 130° | 2

Garant Jobber drill set, plain shank with 3 clamping faces

Composed of jobber drills DIN 338.

Additionally with intermediate sizes for tapping drill holes Ø 1.6; 3.3; 4.2; 6.8; and 10.2 mm.

Note: Ø 1 - 3.5 mm: Drills with plain shank, **without drive flats.**
Ø 4 - 10.5 mm: Drill with plain shank and 3 drive flats.

Type		1-10,5
11B 11 4010	Jobber drill set HSS-E No. 114001 with case	eShop
Drill range	mm	1 – 10.5
Number of drills		25
Tapping hole Ø	mm	1.6; 3.3; 4.2; 6.8; 10.2
Incremental steps of drills	mm	0.5

11 4010

DIN 338 | h8 | 118° | 2

≤ Ø 3,5 | ≥ Ø 4

Garant

Jobber drill, plain shank with stepped tip

Chamfers are nitrided. Particularly sturdy and robust due to the **strengthened core diameter.**
Ground flutes, with high concentricity. Precision ground point.
Three **drive flats on the shank** for use in a 3-jaw chuck.

- Ideal for producing precise holes in sheet metal, pipes, and profiles.
- Reliable spot drilling without centring or centre punching – even on curved surfaces – thanks to **innovative ground point.**
- **Oblique drilling** possible without any problems after the first level of the drill tip has penetrated the material.
- Drilling with significantly less force required than with conventional DIN338 HSS drills – up to a diameter of 13 mm directly in the cordless drill/driver.
- Stable and secure form fit in the 3-jaw chuck.
- **General use** across a wide spectrum of materials including plastic, wood and acrylic without tearing or splintering.
- The drill does not rattle or dig in – even in the case of thin-walled materials.
- Burr-free drill exit.
- Ideal for drilling out bolts and rivets.

11 4008 – With special cutter geometry also for use in stainless steels.

Recommendation: Maximum drilling depth:

$L_2 = L_C - 1.5 \times D_C$.

Note:
Size 1–3,5 – Drills with plain shank, **without drive flat.**
Size 4–13 – Drill with plain shank and 3 drive flats.

Application areas

General purpose steel => **HSS**

Stainless, brass => **HSS-E**

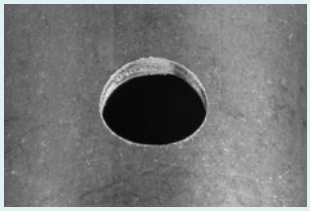
HSS 11 4004

HSS-E 11 4008

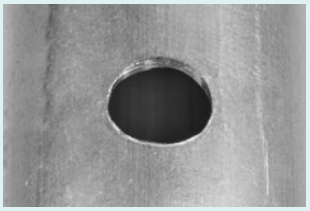
For use on general materials:

- Aluminium pipe
- Copper pipe
- Brass panel
- Acrylic glass
- PVC plastic pipe
- St37 (structural steel)
- and much more.

PVC



St37



Aluminium

Brass

Our customers' opinions:

- St37 (S235) => "No problems, holes are beautifully round and smooth."
- INOX (VA, stainless) => "Works flawlessly. Choosing the right cutting data is crucial."
- Plastic => "Clean surface without burrs."
- Copper => "So far only positive feedback from my mechanics."

HSS | Type N | h8 | 118° | 2

Jobber drills, plain shank

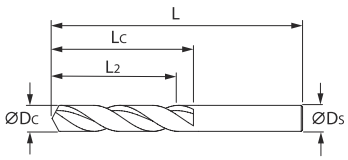
Roll forged, standard helix angle, core thickness and core taper.
Dimensions to DIN 338.

11 4000 – No interruption in the material structure, so the drill is more resilient and suitable for arduous drilling tasks (e. g. with hand held drills). Economy version.

11 4020 – Robust jobber drill with strengthened core and small chisel point for easy spot drilling and accurate centring of the designated hole. **Precision roll forged flutes.**

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

Note:
11 4020 – Size 14-20: Shank ⌀ 13 mm with 3 drive flats.



11 4000

11 4020

Precision roll forged (11 4020):
The profile is forged in a chipless process, the guide chamfers are additionally ground.

Jobber drills, plain shank

11 4031 – **HOLEX CleverDrill:** Sturdy drills for all standard applications. Improved spot drilling behaviour due to cross-ground form. Standard core thickness and core taper. Profile ground. Surface: Bronze-coloured tempered helical flutes.

11 4150 – Profile ground: Jobber drill with high pitch accuracy and concentricity as well as precision ground point. Steam tempered from Ø 2.4 mm.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

Note:

11 4031 – **Successor product to No. 114030.**
Size 13.2 – 20: With stepped shank Ø 12.7 mm.

11 4150 – Size 16 - 20: Drills with shank Ø 16 mm.

HSS | DIN 338 | h8 | 35-40° | 2

Jobber drills, plain shank

Standard core without core taper.
Precision ground point.

11 4200 – Ground flute with high helix.
Bright ground surface finish.

11 4360 – **Profile ground:**
High concentricity and pitch accuracy, drills for series production use.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

≥ 2 mm — Type W 130° — 11 4200

≥ 2.4 mm — Type N 118° — 11 4360

HSS E | DIN 338 | h8 | 2

Jobber drills, plain shank

Profile ground: this ensures high concentricity and pitch accuracy. Precision ground point. Drill for production use.

11 4400 – **Reinforced core**, bright finish.

11 4450 – **Strengthened core.** Bright finish **parabolic flutes,** from 3 mm nitrided chamfers.

Recommendation: Maximum drilling depth:

$L_2 = L_C - 1.5 \times D_C$.

Garant

Jobber drill with plain shank, for stainless steels

11 4500 – **Strengthened core taper.**

11 4550 – **Extremely high heat resistance, very robust** due to **strong core.**

11 4580 – High performance drills for outstanding performance. Precision holes due to optimised diamond point geometry and 4-face grinding. The special flute profile yields a significant reduction in cutting forces.

Recommendation: Maximum drilling depth:
$L_2 = L_c - 1.5 \times D_c$.

HSS E | DIN 338 | h8 | 118° | 35° | 2

Garant Jobber drills, plain shank

High performance drills for outstanding performance.
Precision holes due to optimised diamond point geometry and 4-face grinding.
The special flute profile yields a significant reduction in cutting forces.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

11 4580

HSS E-PM | DIN 338 | h8 | 130° | 38° | 2 | HPC

Garant

HPC jobber drill

High-performance HPC twist drills for high-alloy and high tensile materials. Particularly strong due to **strengthened core and a parabolic flute profile**. Point geometry with rake angle correction. Precise concentricity for exact holes.

11 4620 – Dimensions similar to DIN 338.
Shank to DIN 1835A.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

Jobber drill sets, DIN 338

Composed of jobber drills DIN 338.

11 5000/5051/5120 Size 1-10C – **Large assortment case**
from 1 mm – 10 mm, with 150 jobber drills:
10 pcs. each ∅ 1 – 6,
5 pcs. each ∅ 6.5 – 10.
Ideal for sitework and workshop use.

11 5000_1-13 | 11 5000_1-13KB with core hole-∅ (3.3; 4.2; 6.8; 10.2) | 11 5000_1-10C

HSS | DIN 340 | h8 | 2

Long jobber drills, deep hole drills, plain shank

11 6000 – Vaporised from 2.4 mm.
Particularly for deep hole drilling (for deep holes, repeated chip evacuation is necessary).

11 6040 – Strengthened core **without core taper.**
Precision ground point.
Wide flutes with heavily honed back edges.
Bright ground surface finish.

11 6051 – **HOLEX CleverDrill** –
Sturdy drill for all standard applications. Improved spot drilling behaviour due to cross-ground form.
Standard core thickness and core taper.
Profile ground.
Surface: Bronze-coloured tempered helical flutes.

≥ 4 mm

11 6000

Type N 

≥ 2.5 mm

11 6040

Type W 

11 6051

Type N 

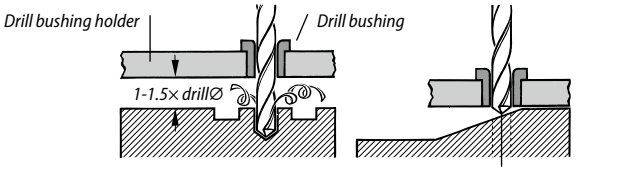
Advantage:

11 6000 – Especially suitable for **long reach purposes.**
(When used to drill deep holes, low feed rates and frequent drill pecks are necessary).

11 6040 – For deep hole drilling and for use with drill bushings.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

Note:
11 6051 – **Successor product to No. 116050.**



Accurate working even on difficult workpiece surfaces.

HSS E | DIN 340 | Type FS | h8 | 130° | 38° | 2

Garant Deep hole drills, plain shank

Significantly **strengthened core** without taper.
Precision ground point.
With **specially shaped slots**. Designed for deep holes up to 10×D and materials with critical chip formation characteristics.

11 6063 – With **TiAlN coating** for long tool lives.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

HSS E | DIN 340 | h8 | 35-40° | 2

Garant Jobber drills, long, plain shank

Profile ground. Standard core thickness and core taper. Bright finish.

Advantage: For drilling with drill bushes or long reach applications.

11 6065 – For high-tensile tempered steels, **including TOOLOX.**

Recommendation: Maximum drilling depth:

$L_2 = L_C - 1.5 \times D_C$.

≥ 2 mm

11 6065

DIN 1869 | h8 | 38° | 2

Garant Extra long jobber drills, plain shank

With precision ground point.

11 6240 – Significantly strengthened core without core taper. Bright finish flutes, nitrided chamfers.

11 6245 – Vaporised high performance drills for drilling particularly deep holes.
Take particular care to ensure **frequent chip clearance.**

11 6250 – Special 4-chamfer relief ground for very good guidance within the bore. Bright finish flutes, nitrided chamfers.

Advantage:

11 6240/6250 – **Special deep hole drills. For particularly deep or recessed holes.**
Good chip evacuation due to parabolic flutes, resulting in fewer chip evacuations even in particularly deep holes.

Recommendation: Maximum drilling depth:
$L_2 = L_c - 1.5 \times D_c$.

HSS E | DIN 1869 | h8 | 38° | 2

Garant Extra long jobber drills plain shank HSS-E

Advantage:

11 6280 – **Particularly suitable for drilling under difficult conditions,** e.g. insufficient cooling of the cutting edges due to poor chip evacuation.

11 6285 – Flute length to DIN 340. For high-tensile tempered steels, **including TOOLOX.**

Recommendation: Maximum drilling depth:

$L_2 = L_C - 1.5 \times D_C$.

HSS | DIN 1898 A | 118° | 1:50 | 2

Garant Taper pin drills, plain shank

Conically increasing cutting edges with chip breaker flutes on the circumference. Special surface treatment.

Advantage: Conical holes 1:50 for taper pins to ISO 2339 (DIN 1) and ISO 8736 (DIN 7978) can be drilled in a single operation.

Note: Ø1.5; 2; 2.5 available with plain shank on request.
Ø14;16; 20; 25 available with MT shank on request.
For finishing use taper pin reamers No. 161200.

HSS | DIN 345 | Type N | h8 | 118° | 20-30° | 2

Jobber drills with Morse taper shank

Special surface treatment, resulting in reduced tendency to edge build-up **and improved chip evacuation.**

11 6340 – **Top quality high performance twist drills.**
Cutting edge section ≤ 26.5 mm Ø ground from solid, > 26.5 mm Ø milled. This ensures high concentricity and pitch accuracy, and precision ground point up to 40 mm Ø.

Recommendation: Maximum drilling depth:
$L_2 = L_C - 1.5 \times D_C$.

Garant

Core drill with Morse taper shank

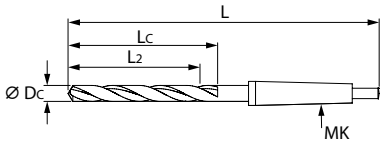
Strong core. Sturdy jobber drill for better guidance in the hole

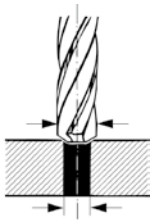
Advantage: Particularly suitable **for drilling out** holes that are out of round. Misaligned holes can be aligned.

Recommendation: **Maximum drilling depth:**
$L_2 = L_C - 1.5 \times D_C$.

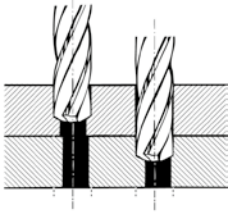
Note: **Please note:**
Do not drill the respective tapping hole Ø (see table) less than the stated size.

11 6620





For pilot hole (D_{min}) see table.



Misaligned holes can be realigned using the core drill.

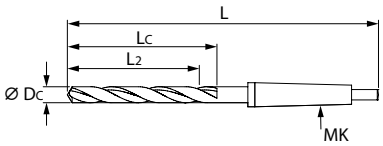
HSS | DIN 341 | Type N | h8 | 118° | 16-30° | 2



Garant Long jobber drills (bushing drill) with Morse taper shank

Compared to DIN 345 the flute length is longer by the drill bushing height. Thus the effective drilling depth is unaffected.
Special surface treatment for improved chip evacuation.

Advantage: **For drilling through drill bushings** in tool making, machine building and series production. Particularly important for drilling into uneven, inclined or arched surfaces.

Recommendation: **Maximum drilling depth:**
$L_2 = L_C - 1.5 \times D_C$.

HSS | DIN 1897 | h8 | 2 | 118° | h8 | 90°

Garant Stub stepped drills for tapping holes, 90° countersink

Very sturdy. Tight concentricity tolerances between drill Ø and counterbore Ø guarantee exact alignment.
11 7020 – Special surface treatment, resulting in reduced tendency to edge build-up and improved chip evacuation.

Advantage: **Hole and countersink are produced in one operation and precisely aligned.**

Application: **Particularly suitable for NC machines** due to high positional accuracy, excellent centring properties and great sturdiness. The preceding centring operation can thus often be omitted. For thread tapping drill holes to DIN 336 sheet 1 with 90° countersink. In the following operation, the tap therefore does not have to cut into the sharp edge of the hole.

11 7120

11 7140

Garant Stub subland drill for through holes, 90° (for countersunk screws)

Very sturdy. Tight concentricity tolerances between drill Ø and counterbore Ø guarantee exact alignment.
11 7120 – Special surface treatment, resulting in reduced tendency to edge build-up and improved chip evacuation.

Application: **Particularly suitable for NC machines** due to high positional accuracy, excellent centring properties and great sturdiness. The preceding centring operation can thus often be omitted.
For through holes for screws to DIN-ISO 273 and countersinks to DIN 74, sheet 1 form A, fine version.
For screws to ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965 and 966).

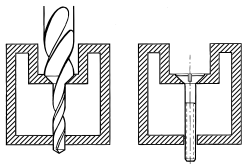
HSS E | Standard | ±0.05 | 118° | h8 | 90° | 2

Garant Stub subland drill for through holes, 90° (for countersunk screws)

With long drilling step.

Application: For through holes for screws to DIN-ISO 273 and countersinks to DIN 74, sheet 1 form A, medium version.
For screws to ISO 2009, 2010, 7046, 7047 (DIN 963, 964, 965 and 966).
Especially suitable for holes with simultaneous countersinking in the profile material.

11 7160



Through hole with counterbore for screw head drilled in a single operation.

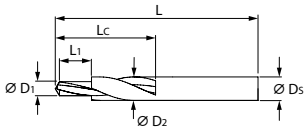
11 7240

11 7260



Garant Stub subland drills for through holes, 180° (for socket-head screws)

Very sturdy. Tight concentricity tolerances between drill Ø and counterbore Ø guarantee exact alignment.

11 7240 – Special surface treatment, resulting in reduced tendency to edge build-up and improved chip evacuation.

Application: For through holes for screws to DIN-ISO 273 and countersinking to DIN 74, sheet 2 form H, J and K, medium version.
For screws to DIN 912, 6912 and 7984, ISO 1207 (DIN 84).

Garant Precision taper sheet and tube drill

HSS | Standard

With sharp drill point, pre-drilling not necessary.
Conically increasing cutting edges and radially relief ground circumference for a paring cut.
With scale in the flutes. Three drive flats on the shank.

11 8030 – **TiN coating:** Higher cutting speeds and significantly longer tool life.
Specially for soft materials with a tendency to smear.

11 8040 – **TiAlN coating for dry machining,** optimum tool life and highest cutting speeds.
Helical flutes for reliable chip evacuation.

Application: Leaves no burr or chatter marks.
Sheet metal 0.1 – 2 mm,
stainless steel 0.1 – 1 mm,
non-ferrous metals: 0.1 – 5 mm,
plastics up to 10 mm.

Carbide

11 8400
11 8500

Carbide hole saw plain shank

Extremely strong and with perfect concentricity due to **drill crown and shank of one piece** (hardened).
Narrow carbide cutting edges with **positive rake** and **large clearance angle** provide good cutting performance at low cutting pressure.
Exchangeable centre drill, shank with 3 clamping faces.

11 8400 – Dimension L: **size ≤ 55 = 35 mm / size 60 = 60 mm.**
11 8500 – Dimension L: **all sizes = 8 mm.**
11 8505 – Cutting width 1.9 mm for all sizes. ∅ tolerance: **+ 0.15 / – 0.05 mm.**
Dimension L: **all sizes = 11.8 mm.**
11 8400/8500 – Cutting width 2 mm for all sizes. ∅ tolerance: **+ 0.10 / – 0.05 mm.**

Application: For use on stationary machines. Suitable for fibre-reinforced plastics (GRP and CRP).
11 8400 – For flat material up to 4 mm thickness, and pipes of up to 4 mm wall thickness.
11 8500 – Only for flat material up to 5 mm thickness.
11 8505 – Only for flat material up to 5 mm thickness.

Core drill for magnetic core drilling machines 30, 35 and 55 mm cutting depth

Standard

Suitable for all popular magnetic core drilling machines. Very good cutting properties due to optimised cutting edge geometry. Easy to regrind. With Weldon shank - ∅ **19 mm.**

11 8782 – **Carbide with special TiAlN coating** – long tool life and outstanding cutting performance.

11 8792 – **HSS uncoated** – attractively priced alternative.

11 8802/8822 – **HSS with special TiAlN coating** for improved cutting characteristics (prevents edge build-up).

Application: On mobile magnetic drilling machines or stationary pillar drilling machines to produce large holes in steel construction. The core drill cuts only a thin material ring. The drilled core is ejected by a spring loaded ejector pin.

Supplied with: **Without** ejector pin.

Note: For the lubrication of core drills, we recommend high performance cutting oil (see No. 084210).

Core drilling machines see No. 076520 – 076536 (Volume II / section 0).

Carbide and HSS QuickIN core drills for FEIN core drilling machines

11 9000 – **High-performance carbide** core drill with QuickIN holder.
For maximum tool life and excellent metal removal rate.
Overall length: 77 mm for all cutter sizes.

11 9010 – **HSS** core drill with long tool life and QuickIn holder.
Overall length: 72 mm for all cutter sizes.

Suitable for: FEIN core drilling machines with QuickIN holder for fast, keyless tool changes. Also suitable for other makes with adapter. The core drill cuts only a ring of material, saving approx. 40 % – 60 % cutting time.

Supplied with: **Without** centring pin.

Note: For FEIN core drilling machines see No. 076520/ 076524/ 076526 group 0 – workshop accessories.
The centring pin No. 119019 is required when using the core drills No. 119010 and 119000.

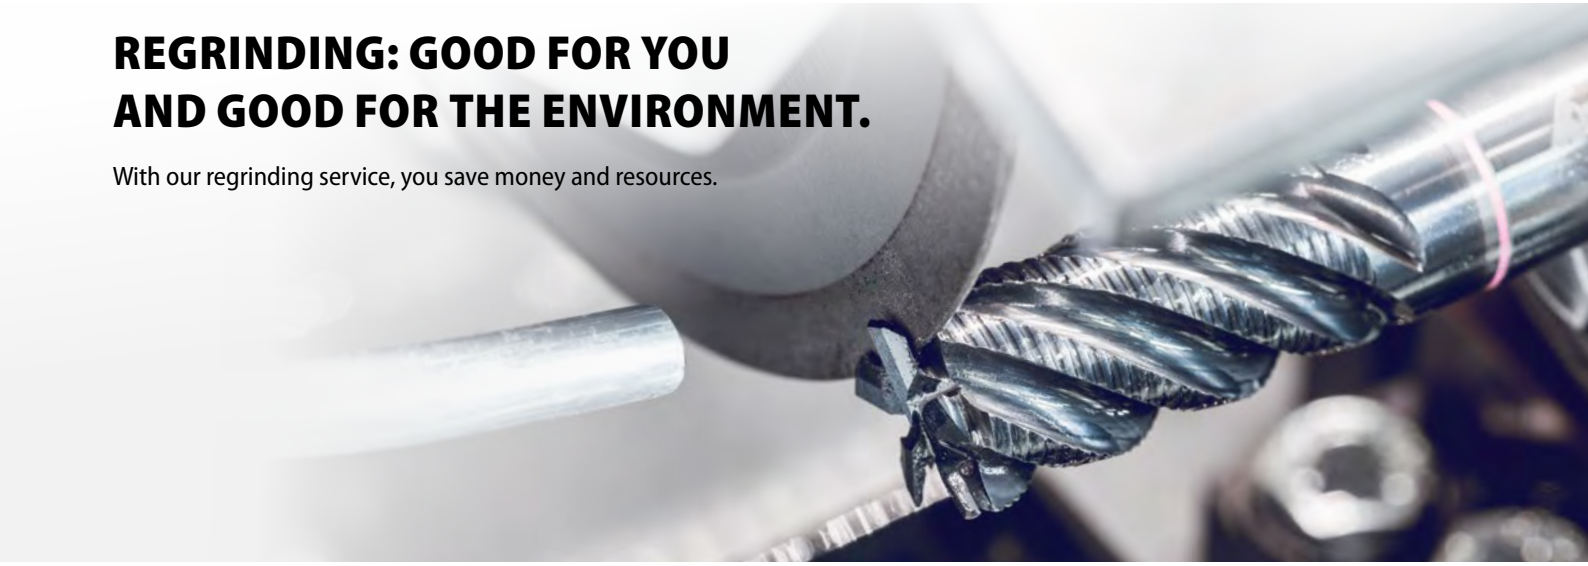
REGRINDING: GOOD FOR YOU AND GOOD FOR THE ENVIRONMENT.

With our regrinding service, you save money and resources.



Hoffmann Group
Regrinding service

Good for you

It is already worth it from the first regrind. Overall, you can expect amazing savings of up to 85%. And all with the original regrind quality, to the original geometry and on the original production machines. There are no compromises here.
In addition: Of course, we also provide you with excellent regrinding results for your third-party brands!

Good for the environment

Reusing the tool saves valuable resources and avoids unnecessary waste. In addition, the shorter transport distances also ensure a reduced CO_2 footprint. A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service.
An all-round worry-free package has never been so easy – and with maximum cost transparency.
For you, this means the highest precision and reliability as quickly as possible.

> "The efficiency and quality of the reconditioned tools due to the original regrind quality surprised me very positively!"
> **Marin Engelsberger, Bacher GmbH**

Further information on the regrinding service:
Discover all about our services online now.

Solid carbide | Standard | h6 | 90°

h6 DIN 6535 HA | h6 DIN 6535 HB

Garant Solid carbide NC spotting drill

12 1019 – **Self-centring** with **1-cutter geometry**, achieves **very high alignment accuracy.**
12 1051 – **Extra long version.**
12 1020–1051 – Exactly **central ground point. Easy spot drilling** and **high shape accuracy** of the centre hole. Sturdy due to short flutes.
12 1020/1040 – **≥ Ø 6 mm with HB drive flat.**
Application: Point angle **90°** for spot drilling and countersinking in one operation when a drill of smaller Ø is used afterwards.

Note: Use the speed for the actual hole Ø (not generally the speed for the drill outer Ø).
12 1019 – **Maintain a feed rate f** = 0.015 mm/rev**!**
12 1051 – HB and HE shanks are available at the same price as HA. (from Ø 6 mm)
form **HB:** order with **No. 121050**.
Form **HE:** order with **No. 121051 + 129100 HE.**

Solid carbide | Standard | h6 | 142°

h6 DIN 6535 HA | h6 DIN 6535 HB

Garant Solid carbide NC spotting drill

12 1068 – **Self-centring** with **1-cutter geometry**, achieves **very high alignment accuracy.**
12 1121 – **Extra long version.**
12 1070–1121 – Exactly **central ground point. Easy spot drilling** and **high shape accuracy** of the centre hole. Sturdy due to short flutes.
12 1070/1110 – **≥ Ø 6 mm with HB drive flat.**

Application: Point angle **142°** so that the cutting edges of the following twist drill engage easily.

Note: Use speed for the actual hole Ø (not generally the speed for the drill outer Ø).
12 1068 – **Maintain a feed rate f** = 0.015 mm/rev**!**
12 1121 – Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 121120**.
Form **HE:** order with **No. 121121 + 129100 HE**.

REAL MASTERS OF HIGH-FEED BORE MACHINING.

The GARANT Master Feed solid carbide drilling tools.

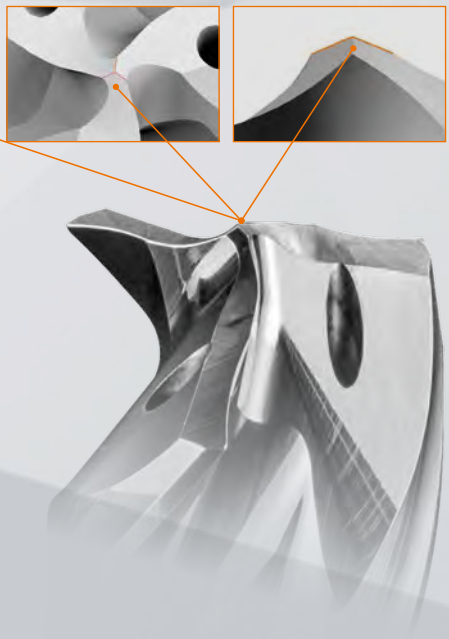
Garant MASTER STEEL FEED

- 4×D — 12 2435 (page 99)
- 6×D — 12 2725 (page 121)
- 8×D — 12 3035 (page 134)
- 12×D — 12 3235 (page 141)

Garant MASTER ALU FEED

- 6×D — 12 2590 (page 110) uncoated.
- 6×D — 12 2595 (page 110) with DLC coating.

- Optimal centring thanks to pyramid tip.
- No additional NC spot drilling is necessary.

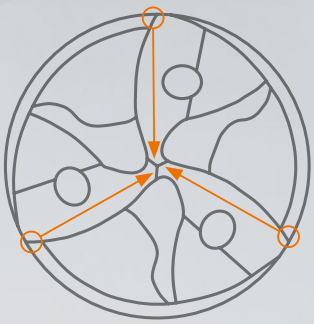


- Robust tool design.
- Special cutting and chip groove geometry.
- Up to **+ 50% metal removal rate** thanks to the third cutting edge.
- Maximum universality in the respective material segment.

Master Steel Feed NC spotting drill*
for maximum process reliability
12 1130 (page 81).

Master Steel Feed stepped drill
for tapping drill holes
12 5035 (page 153)
and configurable
12 5040 – 12 5044 (page 153).

Reliable self-centring when engaging in the material.



* Only necessary for the GARANT Master Steel Feed.

Solid carbide | Standard | h6 | 155° | h6 DIN 6535 HA | 3

Garant GARANT Master Steel Feed solid carbide NC spotting drill

3-flute NC spotting drill with high positioning accuracy and special point angle 155° for the GARANT Master Steel Feed drill. The **sector-leading technology of the drill point** guarantees **optimum self-centring behaviour** and permits spot drilling on irregular surfaces.

Note: Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 121130 + 129100 HB.**
Form **HE:** order with **No. 121130 + 129100 HE**.

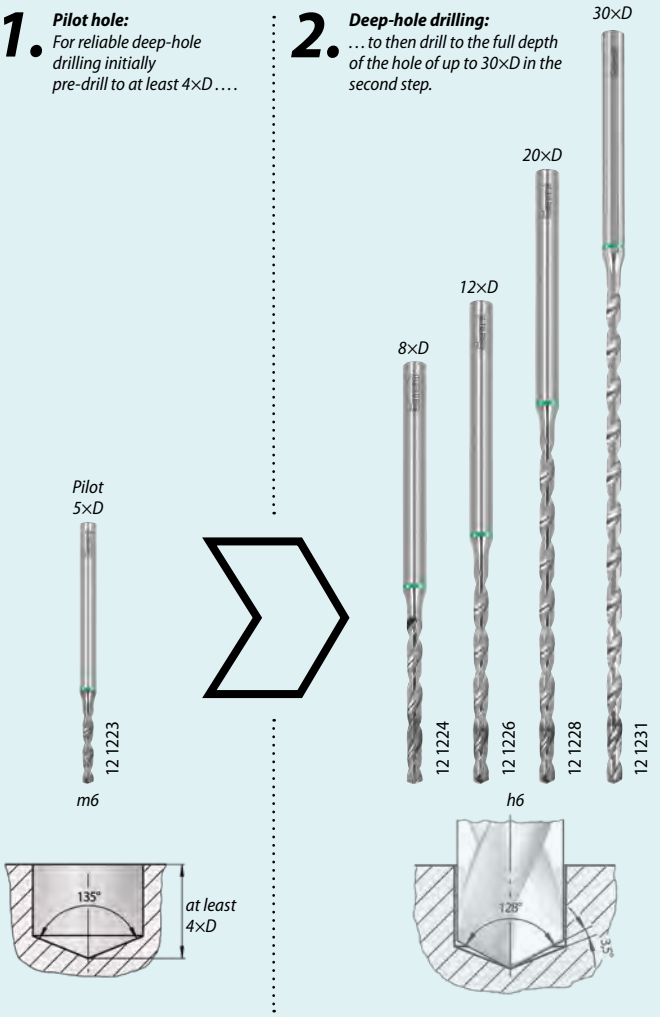
Technical precision at the highest level.

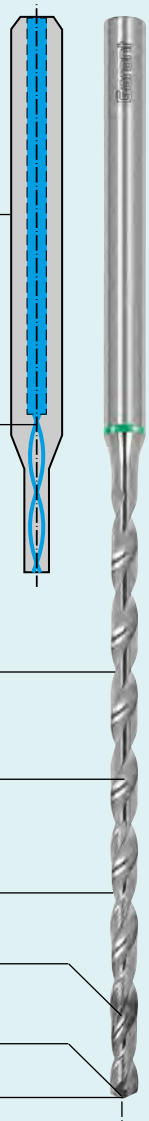
Process-reliable, general high-performance precision boring in the micro-range – up to a drilling depth of 30×D.

Exactly matching tools within the overall system.

1. ***Pilot hole:*** *For reliable deep-hole drilling initially pre-drill to at least 4×D ….*

2. ***Deep-hole drilling:*** *… to then drill to the full depth of the hole of up to 30×D in the second step.*





Central high-pressure cooling
Increased coolant hole cross-section in the shank area for increased flow of coolant and maximum extended range. Top flow speed and optimum cooling over the entire shank length for all versions and sizes.

Transition to helical coolant channel

Ultra-micrograin substrate with 10% cobalt proportion
Specially developed for micro-machining.

Lapped flute surface
For optimum chip evacuation.

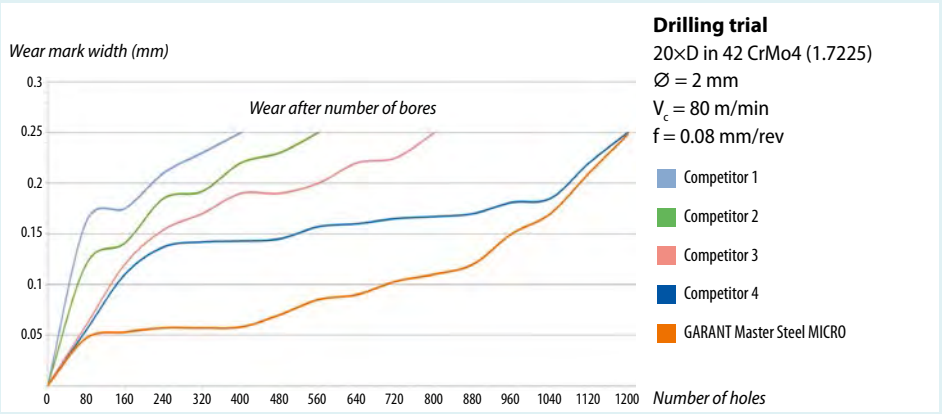
Diameter range
5×D: 0.75 mm – 3.00 mm;
8×D – 30×D: 0.80 mm – 3.00 mm

Wear-resistant and ultra-smooth AlCrN-based high-performance coating

Specially prepared and homogenised cutting edge for optimum chip shape

Very precise point geometry for reliable centring behaviour

Outstanding in steel and absolutely reliable UNI.



Drilling trial
20×D in 42 CrMo4 (1.7225)
Ø = 2 mm
V_c = 80 m/min
f = 0.08 mm/rev

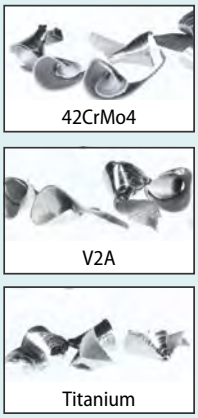
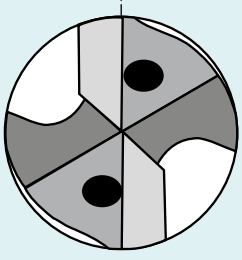
- GARANT Master Steel MICRO





Solid carbide | Standard | 2 | h6 DIN 6535 HA | 40 bar | HPC | x

Garant GARANT Master Steel Micro solid carbide drill

High-performance micro-drill for general-purpose use on material, focussing on steel processing.
Maximum process reliability due to **exactly matched tools within the overall system** and **expanded guide chamfer.**
Drilling of very small diameters down to the maximum depth after creating a pilot hole.
Optimum compromise between core diameter and flute size for optimum chip evacuation – even with long-chipping materials.
The **increased metal removal rates and longer tool life** ensure an economical drilling process,
even with very small hole diameters combined with a large L/D ratio.

Note:
For reliable use of the micro-drills from 8×D, a **pilot hole** of **at least 4×D** is required using the micro-pilot drill 121223.
For vertical machining and flat workpiece surfaces, a pilot hole can be dispensed with from D_C = Ø 1 mm up to a length of 12×D.
Please always ensure that the **pilot hole is free from chips** before using the subsequent drilling tool.
We recommend setting a 90° counterbore with a suitable NC spotting drill after the pilot hole has been completed.
For critical applications (e.g. highest possible production accuracy, minimal burr formation, reduced coolant pressure),
reduce the feed rate of the tool by 50% before entering and exiting the material.
Long-chipping materials may require **chips to be evacuated** in steps of 3×D each by moving the drill back slightly at pilot hole depth.
Please make sure that you use a suitable **tool clamping device** (shrink-fit chuck, hydraulic clamping chuck)
with a radial run-out of less than 0.003 mm, a sufficiently high **coolant pressure** (at least 30 bar),
as well as sufficiently fine **filtration** of the cooling medium (D_C <Ø 2 mm with filter ≤ 0.010 mm; D_C <Ø 3 mm filter ≤ 0.020 mm).
The specified L/D ratio gives the **minimum achievable depth of hole** with the respective micro-drill.
Flute length $L_C = L_2 + 1.5 \times D_C$.

Solid carbide | Standard | h6 | 2 | 128° | h6 DIN 6535 HA | 40 bar | HPC | x

Garant GARANT Master Steel Micro solid carbide drill

High-performance micro-drill for universal material use, focussing on steel processing.
Maximum process reliability due to **exactly matched tools within the overall system** and **expanded guide chamfers.**
Drilling of very small diameters down to the maximum depth after creating a pilot hole.
Optimum compromise between core diameter and flute size for optimum chip evacuation – even with long-chipping materials.
The **increased metal removal rates and longer tool life** ensure an economical drilling process,
even with very small hole diameters combined with a large L/D ratio.

Note:
For reliable use of the micro-drills from 8×D, a **pilot hole** of **at least 4×D** is required using the micro-pilot drill 121223.
For vertical machining and flat workpiece surfaces, a pilot hole can be dispensed with from D_C = Ø 1 mm up to a length of 12×D.
Please always ensure that the **pilot hole is free from chips** before using the subsequent drilling tool.
We recommend setting a 90° counterbore with a suitable NC spotting drill after the pilot hole has been completed.
For critical applications (e.g. highest possible production accuracy, minimal burr formation, reduced coolant pressure),
reduce the feed rate of the tool by 50% before entering and exiting the material.
Long-chipping materials may require **chips to be evacuated** in steps of 3×D each by moving the drill back slightly at pilot hole depth.
Please make sure that you use a suitable **tool clamping device** (shrink-fit chuck, hydraulic clamping chuck)
with a radial run-out of less than 0.003 mm, a sufficiently high **coolant pressure** (at least 30 bar),
as well as sufficiently fine **filtration** of the cooling medium (D_C <Ø 2 mm with filter ≤ 0.010 mm; D_C <Ø 3 mm filter ≤ 0.020 mm).
The specified L/D ratio gives the **minimum achievable depth of hole** with the respective micro-drill.
Flute length $L_C = L_2 + 1.5 \times D_C$.

Solid carbide	DIN 338	Type N	h7	2	118°	30°	h7

Solid carbide jobber drill

Similar to DIN 338.
Nominal Ø and shank Ø equal.

12 2251 – TiAlN coating for even better performance.
12 2301 – TiN coating.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Non slip clamping in drill chuck No. 341050 with diamond coated jaws.

12 2250

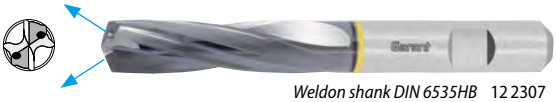
Solid carbide | DIN 6537 K | 4×D | Type W | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant Solid carbide HPC drill

DLC coating sp² of the latest generation with **low coefficient of friction** results in **outstanding chip clearance.** For **high-performance milling** of **aluminium materials**. **High alignment accuracy** and **roundness of the hole,** thanks to **6 guide chamfers**.
Size 1 - 1.5 with 4 guide chamfers.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122307**.
Form **HE:** order with **No. 122306 + 129100HE**.

Plain shank DIN 6535HA 12 2306



Weldon shank DIN 6535HB 12 2307

Whistle-Notch shank DIN 6535HE 12 2306 + 12 9100HE

Solid carbide | DIN 6537 K | 4×D | Type H | h7 | 2 | 140° | h6 DIN 6535 HA | HPC | x

Garant GARANT Diabolo solid carbide HPC drill for hard machining

Cutting chisel edge with high centring accuracy
due to **strong core and special point geometry**.
Convex major cutting edges with **defined honed edge**
ensure the drill has high stability and maximum load capacity.
Special multi-nano layer coating for drilling in hardened steels.

Note: HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **No. 122362**.
For **HE shanks:** use order **No. 122361 + 129100HE**.
Flute length $L_C = L_2 + 1.5 \times D_C$.

Solid carbide | DIN 6537 K | 4×D | m7 | 2 | 140° | h6 DIN 6535 HA

HOLEX Pro INOX solid carbide high-performance drill

Efficient drilling especially for use in **stainless and acid-resistant steels.**
Straight main cutting edges with **optimised cutting edge design** for improved chip breaking behaviour. Enlarged flutes for **excellent chip evacuation.**
Increased wear resistance due to **improved carbide substrate** and **high temperature resistant coating.**

Note:
Flute length $L_c = L_2 + 1.5 \times D_c$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 122391**.
For **HE shanks:** use order **no. 122392**.

Solid carbide	DIN 6537 K	4×D	m7	2	140°	h6 DIN 6535 HA	25 bar

HOLEX Pro INOX solid carbide high-performance drill

Efficient drilling especially for use in **stainless and acid-resistant steels.**
Straight main cutting edges with **optimised cutting edge design** for improved chip breaking behaviour.
Enlarged flutes for **excellent chip evacuation.**
Increased wear resistance due to **improved carbide substrate** and **high temperature resistant coating.**

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 122491**.
For **HE shanks:** use order **no. 122492**.

Plain shank DIN 6535 HA 12 2490

Weldon shank DIN 6535 HB 12 2491

Solid carbide | DIN 6537 K | 4×D | m7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

Solid carbide HPC drill

Specially for machining **titanium-based and nickel-based alloys.** With wear-resistant, ultra-smooth TiAlSiN high-performance coating for a **long tool life** combined with **optimum bore quality** and **very low burr formation.**

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB**: use order **No. 122481**.
For **HE**: use order **No. 122480** and **129100HE**.

Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Uni Hero solid carbide high-performance drill

The ultimate in universality and profitability in one tool.
Robust tool design and **convex-concave curved cutting edge design**
for optimum tool stability and chip breakage behaviour in a wide range of materials.
Special flute geometry and **polished flutes**
for ideal chip evacuation and maximum process reliability.
Ultra-smooth TiAlSiN high-performance coating
to effectively reduce wear and the formation of built-up edges.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 122451**.
For **HE shanks:** order with **No. 122450** and **12900HE**.
Articles with prices in brackets: Different delivery time and minimum order quantity is 3 pieces.

Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 135° | h6 DIN 6535 HA | HPC | x

Garant GARANT Master Steel Speed solid carbide drill

Developed for use with **very high cutting speeds**. Outstandingly suitable for machines with **low power output** and high speeds.

- Clear reduction in cutting forces due to special cutter geometry.
- Coating for best wear resistance even at high process temperatures.
- Polished flutes for good chip clearance.

A **slim chisel edge** and the **special arrangement of the 4 guide chamfers** ensure **high positioning and alignment accuracy**. Optimised micro-geometry for increased working life and performance capability.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122416**.
Form **HE:** order with **No. 122415 + 129100HE**.

Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Steel Speed solid carbide drill

Developed for use with **very high cutting speeds**. Outstandingly suitable for machines with **low power output** and high speeds.

- Clear reduction in cutting forces due to special cutter geometry.
- Coating for best wear resistance even at high process temperatures.
- Polished flutes for good chip clearance.

A **slim chisel edge** and the **special arrangement of the 4 guide chamfers** ensure **high positioning and alignment accuracy**. Optimised micro-geometry for increased working life and performance capability.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Versions HB and HE supplied at the same price as HA.
Form **HB:** state **No.122426** on the order.
Form **HE:** order with **No.122425 + 129100HE**.

Solid carbide | DIN 6537 K | 4×D | h7 | 3 | 145° | h6 DIN 6535 HA | 25 bar | HPC

Garant GARANT Master Steel Feed solid carbide drill

3-flute drill, specially developed for **use at very high feed rates**. Extremely suitable for **machines with high power** output and stable machining conditions.

- Special point geometry with stable cutting edges and large clearance at the centre permits very high feed rates.
- The patented point geometry is optimised for chip flow and generates low cutting forces with good chip breakage.
- With 145° point angle for low burr formation when drilling through holes.

The **sector-leading technology of the chisel point** guarantees **optimum self-centring behaviour** and permits spot drilling on irregular surfaces.
3 guide chamfers guarantee a stable exit from the hole and an exact roundness of the hole.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **No. 122436**.
For **HE shanks:** use order **No. 122435 + 129100HE**.

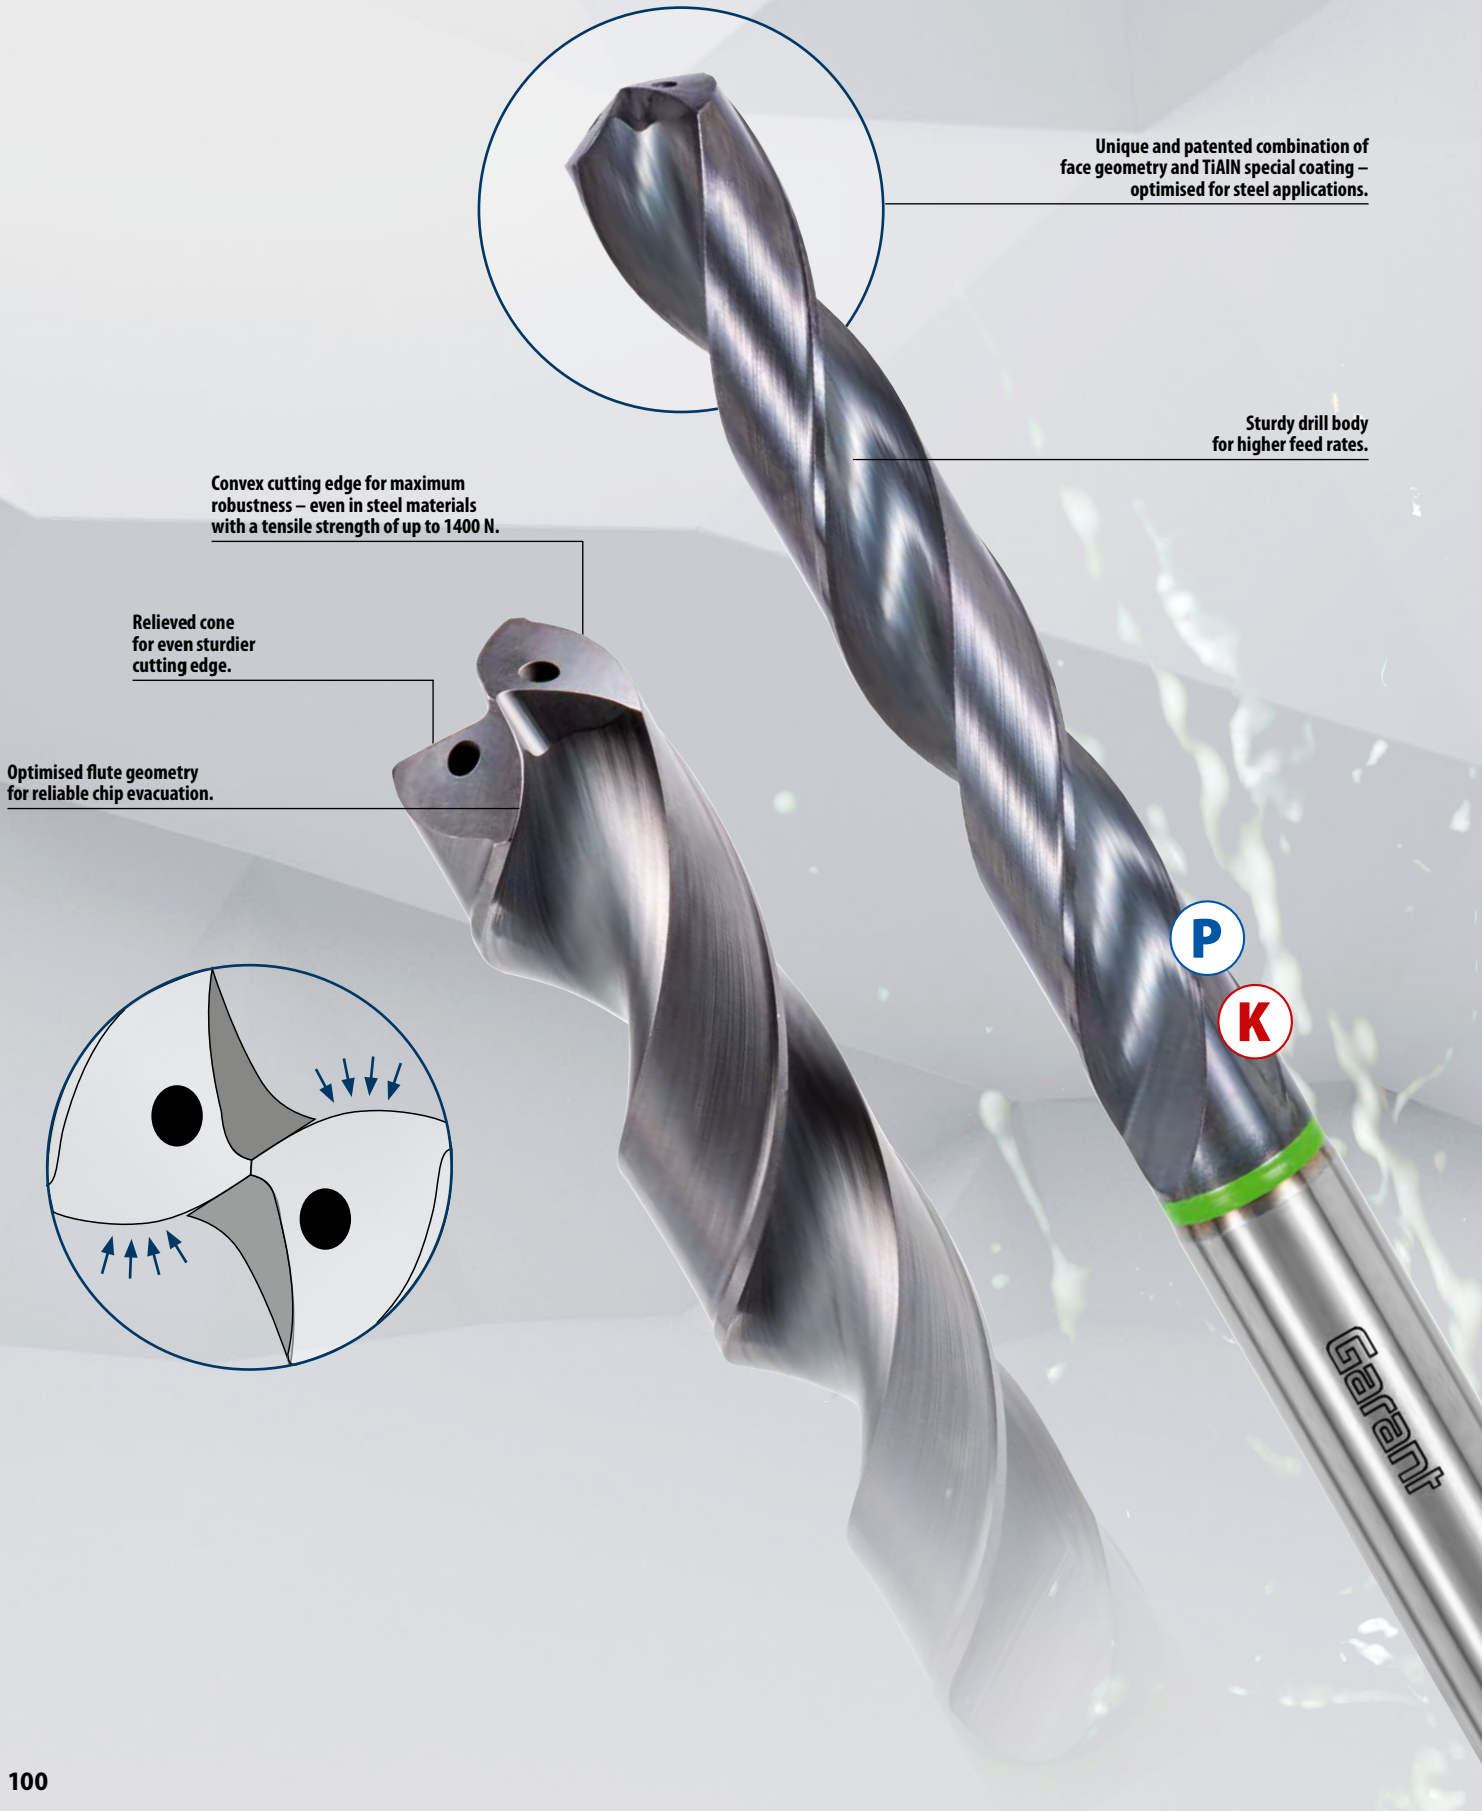
Garant MASTER STEEL

MASTERFUL PERFORMANCE IN STEEL

The latest technology meets the tried-and-tested sturdiness and reliability of a convex cutting edge.



The initial portfolio

- Diameter range:
  3 mm* to 20 mm.
- Types:
  – 4×D without internal cooling (12 2470)
  – 4×D with internal cooling (12 2475)
  – 6×D with internal cooling (12 2761)
  – 8×D with internal cooling (12 3040)
  – 12×D with internal cooling (12 3240)
- Convenient tool upgrade
  as the **dimensions**
  and **list price are the same**
  as the old tool!

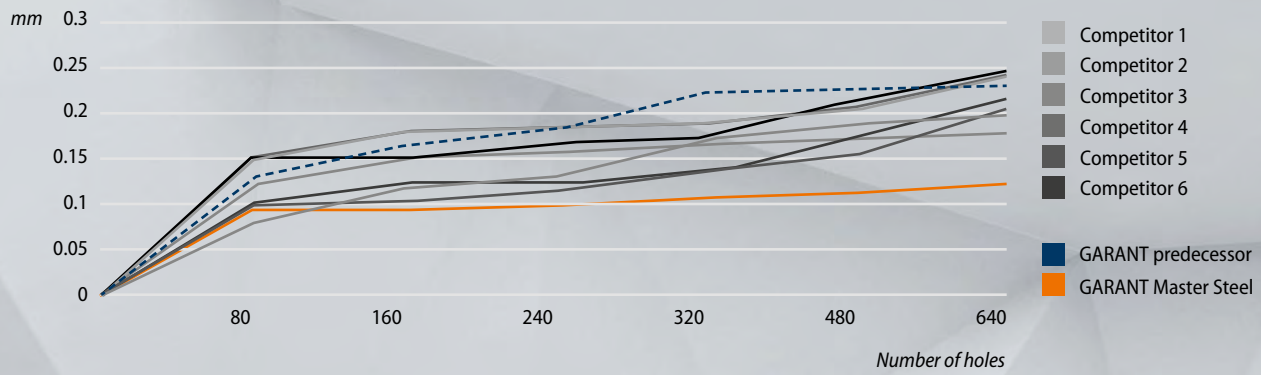
Advantages

- Up to **200% longer tool life**
  in comparison with the competition.
- Up to **50% longer tool life**
  compared with the previous product.

… and with up to
30% higher metal removal rate!

12

Development of wear in 1.2379 up to 640 holes



Garant MASTER STEEL MICRO

* Use the GARANT Master Steel Micro solid carbide micro-drill (see pages 83 – 86) for efficient machining of steel in diameters ranging from 0.8 mm to 3 mm.

Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 140° | h6 DIN 6535 HA | HPC | x

Garant GARANT Master Steel solid carbide high-performance drill

Robust drill design and optimised special point geometry for the **best possible chip formation and reliable chip breakage** with **higher feed rates at the same time. Advanced micro-geometry, convex** cutting edge and **relieved cone**to provide additional stability for the main cutting edge. **Optimised flute geometry and patented face geometry** for **reliable chip evacuation** in steel materials and cast material. **High-performance coating** of the latest generation.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
HB shank: order with **No. 122471 / 122476**.
HE shank: order with **No. 122470 / 122475** and **129100HE**.

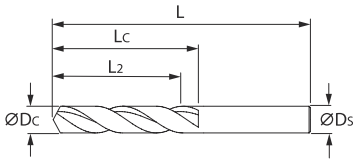
Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 140° | h6 DIN 6535 HA | HPC | x



HOLEX Pro Steel solid carbide high-performance drill

Straight major cutting edges and a **special flute profile** ensure a good chip evacuation. The robust cutter geometry ensures high-performance drilling with good process reliability.
A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and an extremely wear-resistant coating.
Up to Ø 1.9 with 4 facets, from Ø 2 with relieved cone.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Versions with HB and HE shank available at the same price as HA.
For **HB shanks:** use order **no. 122502**.
For **HE shanks:** use order **No. 122503**.

Solid carbide | DIN 6537 K | 4×D | h7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

HOLEX Pro Steel solid carbide high-performance drill

Straight major cutting edges and a **special flute profile** ensure good chip evacuation. The robust cutter geometry ensures high-performance drilling with good process reliability.
A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and an extremely wear-resistant coating.
Up to ∅ 1.9 with 4 facets, from ∅ 2 with relieved cone.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Versions with HB and HE shank available at the same price as HA.
For **HB shanks:** use order **no. 122507**.
For **HE shanks:** use order **No. 122508**.

Plain shank DIN 6535 HA 12 2504

Solid carbide | Standard | 3×D | m7 | 2 | 180° | h6 DIN 6535 HA | 25 bar | x

Garant Solid carbide drill 180°

Special point geometry for generating **180° flat-bottomed holes.** Low radial forces even when spot drilling on faces with up to 45° slope. Flute geometry for optimum chip evacuation. With 4 guide chamfers to stabilise the drill in the hole.

Advantage: **The 180° point angle** permits drilling and counterboring in a single operation.

Recommendation: When using the solid carbide 180° drill it is absolutely essential for process reliability:

- **when spot drilling on flat surfaces** to drill a pilot hole 1×D using pilot drill No. 122736**.**
- **when spot drilling on sloping surfaces** up to 15° : reduce the feed rate f **to 50 %,** up to 30°: reduce the feed rate f **to 40 %** and up to 45°: reduce the feed rate f **to 25 %** of the stated value. **After spot drilling**, the **normal feed rate value** can be used.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122506 + 129100HB** .
Form **HE:** order with **No. 122506 + 129100HE**.
180° solid carbide drills for machining aluminium available on request.
Not suitable for generating counterbores for socket-head screws to DIN974-1.

Plain shank DIN 6535 HA 122506

Weldon shank DIN 6535 HB 122506 + 129100HB

Whistle-Notch shank DIN 6535 HE 122506 + 129100HE

With cutting edge chamfer (= 5% of the nominal Ø)

Pilot drill

Solid carbide | Standard | 5×D | m7 | 90° | h6 DIN 6535 HA | 2

Garant

Solid carbide high performance special drill for GRP / CRP, non-standard sizes

With the latest generation of **crystalline diamond coating sp³**, for process reliability in machining **fibre-reinforced composites, CRP, GRP, and graphite. With 90° point angle** and special geometry to **avoid delamination.**

12 2512 – **With guide chamfer** for materials with **multi-directional** fibre orientation.

12 2522 – **With cutting guide chamfer** to avoid delamination, projecting fibres, and burr formation on materials with **uni-directional** fibre orientation.

Note:
Flute length $L_c = L_2 + 1.5 \times D_c$.
Available in **1/100 sizes** and according to the table.
Please note the minimum order quantities for configurable sizes:
Ø range 1.01 – 2.99 mm: **10 pieces**
Ø range 3.01 – 9.99 mm: **5 pieces**
Ø range 10.01 – 11.99 mm: **3 pieces**

Solid carbide | DIN 6537 L | 6×D | Type W | h7 | 3 | 130° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Alu Feed solid carbide drill

3-cutter tool, specially developed for use at **very high feed rates** in aluminium. Outstandingly suitable for machines with **high power consumption** and stable machining conditions.

- Specially developed cutter geometry, designed for very high feed rates, reduced cutting pressure and controlled chip breaking.
- Precision flute profile for reliable evacuation of chips.
- Achieve outstanding feed rates and tool life thanks to the third cutting edge.

The sector-leading technology of the drill point for the tool guarantees optimum self-centring behaviour and permits spot drilling on irregular surfaces. 3 guide chamfers guarantee a stable exit from the hole and an exact roundness of the hole.

12 2595 – **With DLC coating** – for longer tool lives, especially with aluminium with a higher Si content. **Coating on order – no return.** Delivery time approx. 3 weeks if the basic item is available ex stock. **Please note the minimum order quantity.**

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.

12 2590 – HB and HE shanks are available at the same price as HA.
For **HB:** use order **No. 122591**.
For **HE:** use order **No. 122590 + 129100HE**.

12 2595 – HB shanks are available at the same price as HA.
For **HB:** use order **No. 122596**.

Solid carbide | DIN 6537 L | 6×D | Type W | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant Solid carbide HPC drill

DLC coating sp² of the latest generation with **low coefficient of friction** results in **outstanding chip clearance.** For **high-performance milling** of **aluminium materials**. **High alignment accuracy** and **roundness of the hole,** thanks to **6 guide chamfers**.
Size 1 - 1.5 with 4 guide chamfers.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122603**.
Form **HE:** order with **No. 122602 + 129100HE**.

Solid carbide | DIN 6537 L | 6×D | Type W | p6 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant Solid carbide HPC pilot drill

Spiral fluted, with **6 guide chamfers** and internal cooling channels.
New generation of high performance pilot drills in the HPC range.
With **140° point angle** and special **p6 cutting edge tolerance** for optimum generation of a pilot hole. High alignment accuracy and **roundness of the pilot hole.**

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
For deep-hole drilling deeper than 16×D a pilot hole is recommended, and for deep-hole drilling from 20×D to 30×D it is essential. **The generation of a pilot hole improves process reliability.**
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122608**.
Form **HE:** order with **No. 122606 + 129100HE**.

Solid carbide | DIN 6537 L | 6×D | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x | m6 | h7

Garant Solid carbide HPC reference drill with 4 cooling channels

Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.** High roundness and alignment accuracy of the deep hole, thanks to **4 guide chamfers.** Outstanding chip evacuation due to **4 internal cooling channels** from Ø 3.8 mm. Up to 3.7 mm Ø with 2 internal cooling channels. **Straight major cutting edges** with honed edges and special flute profile for **short chips**, even on long chipping materials.

Attention: Sizes **ending with X** = cutter Ø tolerance **h7.**

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122661**.
Form **HE:** order with **No. 122659 + 129100HE**.

Solid carbide	DIN 6537 L	6×D	m7	2	140°	h6 DIN 6535 HA	25 bar

HOLEX Pro INOX solid carbide high-performance drill

Efficient drilling especially for use in **stainless and acid-resistant steels.** Straight main cutting edges with **optimised cutting edge design** for improved chip breaking behaviour. Enlarged flutes for **excellent chip evacuation.** Increased wear resistance due to **improved carbide substrate** and **high temperature resistant coating.**

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 122686**.
For **HE shanks:** use order **no. 122687**.

Plain shank DIN 6535 HA 12 2685

Weldon shank DIN 6535 HB 122686

Whistle-Notch shank DIN 6535 HE 122687

Solid carbide | DIN 6537 L | 6×D | m7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant Solid carbide HPC drill

Specially for machining **titanium-based and nickel-based alloys.**
With wear-resistant, ultra-smooth TiAlSiN high-performance coating for a **long tool life** combined with **optimum bore quality** and **very low burr formation.**

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB**: use order **No. 122681**.
For **HE**: use order **No. 122680** and **129100HE**.

Solid carbide	DIN 6537 L	6×D	h7	2	140°	h6 DIN 6535 HA	25 bar	HPC	x

Garant GARANT Uni Hero solid carbide high-performance drill

The ultimate in universality and profitability in one tool.
Robust tool design and **convex-concave curved cutting edge design** for optimum tool stability and chip breakage behaviour in a wide range of materials. **Special flute geometry** and **polished flutes** for ideal chip evacuation and maximum process reliability.
Ultra-smooth TiAlSiN high-performance coating to effectively reduce wear and the formation of built-up edges.

Note:
Flute length $L_c = L_2 + 1.5 \times D_c$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 122701**.
HE shank: order with **No. 122700** and **12900HE**.
Items with prices in brackets:
Differing delivery time and minimum order quantity 3 pieces.

Garant UNI HERO

UNIVERSAL. SIMPLE. UNIQUE. THE NEW SUPERHERO FOR DRILLING.

True machining heroes are not born, they are made!
The ultimate in universality and profitability in one tool.

Convex-concave curved main cutting edge

- Optimum chip-breaking behaviour and maximum sturdiness in a wide range of materials.
- Reliable centering with increased feed rate.

Special flute geometry and polished flutes

for ideal chip evacuation and maximum process reliability in a wide range of materials.

Stable tool design

prevents tool breakages.

Ultra-smooth TiAlSiN high-performance coating.

to effectively reduce wear and the formation of built-up edges.

Initial portfolio

- Types:
  4 × D (12 2450/51)
  6 × D (12 2700/01)
  8 × D (12 3020/21)
- All tools with through-coolant.
- Diameter range ∅ 2.5 – 16.0 mm.
- Semi-standard for ordering all intermediate dimensions via the Hoffmann eShop (size designation "– X").

S
M
K
P
N

Use in almost all ISO material groups.*

*Except hard machining > 55 HRC. Suitable to a limited extent for superalloys and long-chipping aluminium. ISO S: Application focus on titanium

Hoffmann Group
Regrinding service

Future-proof with the Data Matrix Code (DMC) to clearly identify tools.

12

Solid carbide | DIN 6537 L | 6×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Steel Speed solid carbide drill

Developed for use with **very high cutting speeds**. Outstandingly suitable for machines with **low power output** and high speeds.

- Clear reduction in cutting forces due to special cutter geometry.
- Coating for best wear resistance even at high process temperatures.
- Polished flutes for good chip clearance.

A **slim chisel edge** and the **special arrangement of the 4 guide chamfers** ensure **high positioning and alignment accuracy**. Optimised micro-geometry for increased working life and performance capability.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122716**.
Form **HE:** order with **No. 122715 + 129100HE**.

Solid carbide	DIN 6537 L	6×D	h7	3	145°	h6 DIN 6535 HA	25 bar	HPC	x

Garant GARANT Master Steel Feed solid carbide drill

3-flute drill, specially developed for use at **very high feed rates**. Outstandingly suitable for **machines with high installed power** and stable operating conditions.

- Special cutter geometry with stable cutting edges and large clearance at the centre enables very high feed rates.
- The patented tip is optimised for chip flow and generates low cutting pressure with good chip breakage.
- With 145° tip angle for low burr formation when drilling through holes.

The **sector-leading technology of the chisel edge** guarantees **optimum self-centring behaviour** and permits spot drilling on irregular surfaces. 3 guide chamfers guarantee a stable exit from the hole and an exact roundness of the hole.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122726**.
Form **HE:** order with **No. 122725 + 129100HE**.

Solid carbide | DIN 6537 L | 6×D | p6 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

Solid carbide HPC pilot drill with 4 cooling channels

Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.** High roundness and alignment accuracy of the deep hole, thanks to **4 guide chamfers.** Outstanding chip evacuation due to **4 internal cooling channels** from Ø 3.8 mm. Up to 3.7 mm Ø with 2 internal cooling channels. With **140° point angle** and special **j6 cutting edge tolerance** for optimum generation of a pilot hole.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
For deep-hole drilling deeper than 12×D a pilot hole is recommended, and for deep-hole drilling from 20×D to 30×D it is essential.
The generation of a pilot hole improves process reliability.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122738**.
Form **HE:** order with **No. 122736 + 129100HE**.

Solid carbide	DIN 6537 L	6×D	m7	2	140°	h6 DIN 6535 HA

HOLEX Solid carbide high performance drill

Plain shank DIN 6535 HA 12 2771

Weldon shank DIN 6535 HB 12 2772

Whistle-Notch shank DIN 6535 HE 12 2773

Tool specially matched to drilling holes without through-coolant. **Concave major cutting edges** and a **special flute profile** ensure a good chip evacuation. The sturdy cutter geometry with **special point geometry** and 4 cutting edges ensures drilling with good process reliability. A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and extremely **wear-resistant** and **heat-resistant coating.**

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122772**.
Form **HE:** order with **No. 122773**.

Solid carbide | DIN 6537 L | 6×D | h7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

HOLEX Pro Steel solid carbide high-performance drill

Straight major cutting edges and a **special flute profile** ensure a good chip evacuation. The robust cutter geometry ensures high-performance drilling with good process reliability. A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and an extremely wear-resistant coating.
Up to ∅ 1.9 with 4 facets, from ∅ 2 with relieved cone.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Versions with HB and HE shank available at the same price as HA.
For **HB shanks:** use order **no. 122777**.
For **HE shanks:** use order **No. 122778**.

H7 | Solid carbide | DIN 6537 L | 6×D | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC

Garant

Solid carbide HPC precision drills for H7 fit

Drilling and reaming in a single operation. Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.** Particularly high alignment accuracy due to **4 guide chamfers.**

Advantage: Very tight **manufacturing tolerances** with **H7 fit** can be produced without additional reaming.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
Solid carbide precision fit drills for machining aluminium available on request.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122790 + 129100HB** .
Form **HE:** order with **No. 122790 + 129100HE**.

Plain shank DIN 6535 HA 12 2790

Weldon shank DIN 6535 HB 12 2790 + 12 9100 HB

Solid carbide | Standard | 5×D | m7 | 2 | 180° | h6 DIN 6535 HA | 25 bar | x

Garant Solid carbide drill 180°

Special point geometry for generating **180° flat-bottomed holes.** Low radial forces even when spot drilling on faces with up to 15° slope. Flute geometry for optimum chip evacuation. With 4 guide chamfers to stabilise the drill in the hole.

Advantage: **The 180° point angle** permits drilling and counterboring in a single operation.

Recommendation: When using the solid carbide 180° drill it is absolutely essential for process reliability:

- **When spot drilling on flat surfaces** to drill a pilot hole 1×D using pilot drill No. 122736.
- **When spot drilling on sloping surfaces** up to max. 15° : **reduce** the feed rate f **to 25%** of the stated value. **After spot drilling**, the **normal feed rate value** can be used.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122793 + 129100HB** .
Form **HE:** order with **No. 122793 + 129100HE**.
180° solid carbide drills for machining aluminium available on request.
Not suitable for generating counterbores for socket-head screws to DIN974-1.

Plain shank DIN 6535 HA 122793

Weldon shank DIN 6535 HB 122793 + 129100HB

Whistle-Notch shank DIN 6535 HE 122793 + 129100HE

With cutting edge chamfer (= 5 % of the nominal ∅)

Solid carbide | Standard | 5×D | 2 | 140° | h6 DIN 6535 HA | 25 bar | x

H7 | ±0.003

Garant Solid carbide drill-reamer with pyramid tip

For producing toleranced holes in steel or short-chipping materials.
Reliable complete machining without separate centring and without subsequent reaming process. Significantly improved self-centring due to **additional pyramid tip** for optimum roundness and tolerance accuracy of the hole that is produced.
Two drill cutting edges and four reaming cutting edges for an attractive surface quality of the wall of the bore.
Tolerance specifications:
H7: Version for H7 bore tolerance.
+/– 0.003 mm: Manufacturing or cutting tolerance of nominal Ø D_C.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **No. 122797 + 129100HB**.
For **HE shanks:** use order **No. 122797 + 129100HE**.

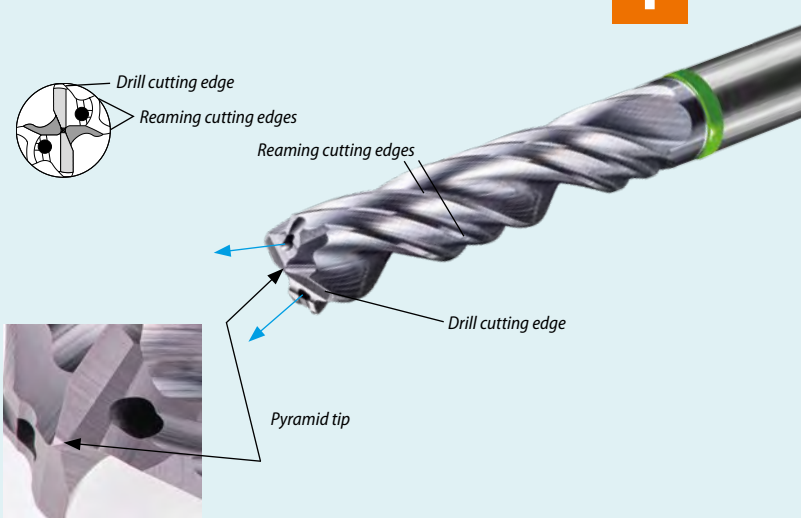
Garant Centring, drilling and reaming in a single operation

With the new GARANT solid carbide drill reamer 12 2797 **several work steps** are combined and toleranced holes are produced faster and more efficiently.

The additional pyramid tip ensures optimum self-centring. Two cutting edges take over the pre-machining and four reaming cutting edges ensure the required surface quality, roundness and dimensional accuracy of the hole in reaming quality.

The elimination of a separate reaming process significantly reduces both direct production times and ancillary production times. In addition, the geometry of the cutting edges and guide chamfers permits precise and economical regrinding.



Solid carbide | Standard | 8×D | Type W | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

Solid carbide HPC drill

DLC coating sp² of the latest generation with **low coefficient of friction** results in **outstanding chip clearance.** For **high-performance milling** of **aluminium materials**. **High roundness** and **alignment accuracy of the deep hole**, thanks to **6 guide chamfers.**

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 122809**.
Form **HE:** order with **No. 122808 + 129100HE**.

Solid carbide HPC drill with 4 cooling channels

Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.**
High roundness and alignment accuracy of the deep hole, thanks to **4 guide chamfers.** Outstanding chip evacuation due to **4 internal cooling channels** from Ø 3.8 mm. Up to 3.7 mm Ø with 2 internal cooling channels.
Straight major cutting edges with honed edges and special flute profile for **short chips**, even on long chipping materials.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 123010**.
Form **HE:** order with **No. 123008 + 129100HE**.

Solid carbide | Standard | 8×D | h7 | 2 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

GARANT Uni Hero solid carbide high-performance drill

The ultimate in universality and profitability in one tool.
Robust tool design and **convex-concave curved cutting edge design** for optimum tool stability and chip breakage behaviour in a wide range of materials. **Special flute geometry** and **polished flutes** for ideal chip evacuation and maximum process reliability.
Ultra-smooth TiAlSiN high-performance coating to effectively reduce wear and the formation of built-up edges.

Note:
Flute length $L_c = L_2 + 1.5 \times D_c$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 123021**.
HE shank: order with **No. 123020** and **129100HE**.
Items with prices in brackets: Differing delivery time and minimum order quantity 3 pieces.

Solid carbide | Standard | 8×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

GARANT Master Steel Speed solid carbide drill

Developed for use with **very high cutting speeds**.
Outstandingly suitable for machines with **low installed power** and high speeds.

- Clear reduction in cutting forces due to special cutter geometry.
- Coating for best wear resistance even at high process temperatures.
- Polished flutes for good chip clearance.

A **slim chisel point** and the **special arrangement of the 4 guide chamfers** ensure **high positioning and alignment accuracy**.
Optimised micro-geometry for increased working life and performance capability.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Versions HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 123026**.
Form **HE:** order with **No. 123025 + 129100HE**.

Solid carbide | Standard | 8×D | h7 | 3 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Steel Feed solid carbide drill

3-flute drill, specially developed for **use at very high feed rates**. Outstandingly suitable for **machines with high installed power** and stable operating conditions.

- Special cutter geometry with stable cutting edges and large clearance at the centre enables very high feed rates.
- The patented tip is optimised for chip flow and generates low cutting pressure with good chip breakage.

The **sector-leading technology of the drill point** guarantees **optimum self-centring behaviour.** 3 guide chamfers guarantee a stable exit from the hole and an exact roundness of the hole.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 123036**.
Form **HE:** order with **No. 123035 + 129100HE**.

Solid carbide | Standard | 8×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

Solid carbide HPC drill, plain shank

Robust drill design and optimised special point geometry for the **best possible chip formation and reliable chip breakage** with **higher feed rates at the same time.**
Advanced micro-geometry, convex cutting edge and **conical profile grinding** to provide additional stability for the main cutting edge.
Optimised flute geometry and patented face geometry for **reliable chip evacuation** in steel materials and cast material.
High-performance coating of the latest generation.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and **HE** shanks are available at the same price as HA.
For **HB shanks:** use order **no. 123041**.
HE shank: use order **No. 123040 + 129100 HE**.

Solid carbide | Standard | 8×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

HOLEX Pro Steel solid carbide high-performance drill

Straight major cutting edges and a **special flute profile** ensure good chip evacuation. The robust cutter geometry ensures high-performance drilling with good process reliability. A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and extremely wear-resistant coating.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
Versions with HB and HE shank available at the same price as HA.
For **HB shanks:** use order **No. 123104**.
For **HE shanks:** use order **no. 123109**.

Solid carbide | Standard | 10×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant Solid carbide HPC drill

Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.**
Particularly high alignment accuracy due to **4 guide chamfers** which stabilise the drill even at extreme depths!
Straight major cutting edges with honed edges and special flute profile for **short chips**, even on long chipping materials.

Advantage: **High process reliability and surface quality of the hole.**

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
Form HB and HE supplied at the same price as HA.
Form **HB:** order with **No. 123115**.
Form **HE:** order with **No. 123110 + 129100 HE**.

Solid carbide | Standard | 12×D | Type W | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant

Solid carbide HPC drill

DLC coating sp² of the latest generation with **low coefficient of friction** results in **outstanding chip clearance.** For **high-performance milling** of **aluminium materials**. **High roundness** and **alignment accuracy of the deep hole**, thanks to **6 guide chamfers.**

Note:
Flute length $L_c = L_2 + 1.5 \times D_c$.
For process reliability when using the 12×D drill, an initial centre drilling with NC spotting drills No. 121068– 121130 is necessary.
Form HB and HE are supplied at the same price as HA.
Order form **HB:** with **No. 123179**.
Order form **HE:** with **No. 123178 + 129100HE**.

Garant Solid carbide HPC drill with 4 cooling channels

Cutting chisel edge with **high centring accuracy** due to **strong core and special point geometry.**
High roundness and alignment accuracy of the deep hole, thanks to **4 guide chamfers.**
Outstanding chip evacuation due to **4 internal cooling channels** from Ø 3.8 mm.
Up to 3.7 mm Ø with 2 internal cooling channels.
Straight major cutting edges with honed edges and special flute profile for **short chips**, even on long chipping materials.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
For process reliability when using the 12×D drill, an initial centre drilling with NC spotting drills No. 121068– 121130 is necessary.
Form HB and HE are supplied at the same price as HA.
Order form **HB:** with **No. 123214**.
Order form **HE:** with **No. 123212 + 129100HE**.

Solid carbide | Standard | 12×D | h7 | 2 | 135° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Steel Speed solid carbide drill

Developed for use with **very high cutting speeds**.
Outstandingly suitable for machines with **low installed power** and high speeds.

- Clear reduction in cutting forces due to special cutter geometry.
- Coating for best wear resistance even at high process temperatures.
- Polished flutes for good chip clearance.

A **slim chisel point** and the **special arrangement of the 4 guide chamfers** ensure **high positioning and alignment accuracy**.
Optimised micro-geometry for increased working life and performance capability.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
For process reliability when using the 12×D drill, an initial centre drilling with NC spotting drills No. 121068 – 121130 is necessary.
Form HB and HE are supplied at the same price as HA.
Order form **HB:** with **No. 123226**.
Order form **HE:** with **No. 123225 + 129100HE**.

Solid carbide | Standard | 12×D | h7 | 3 | 140° | h6 DIN 6535 HA | 25 bar | HPC | x

Garant GARANT Master Steel Feed solid carbide drill

3-flute drill, specially developed for **use at very high feed rates**.
Outstandingly suitable for **machines with high installed power** and stable operating conditions.

- Special cutter geometry with stable cutting edges and large clearance at the centre enables very high feed rates.
- The patented tip is optimised for chip flow and generates low cutting pressure with good chip breakage.

The **sector-leading technology of the drill point** guarantees **optimum self-centring behaviour.** 3 guide chamfers guarantee a stable exit from the hole and an exact roundness of the hole.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
For process reliability when using the 12×D drill, an initial centre drilling with an NC spotting drill No. 121130 with **155° point angle** is necessary.

Garant GARANT Master Steel solid carbide high-performance drill

Robust drill design and optimised special point geometry for the **best possible chip formation and reliable chip breakage** with **higher feed rates at the same time. Advanced micro-geometry, convex** cutting edge and **conical profile grinding** to provide additional stability for the main cutting edge. **Optimised flute geometry and patented face geometry** for **reliable chip evacuation** in steel materials and cast material. **High-performance coating** of the latest generation.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
For process reliability when using the 12×D drill, an initial centre drilling with No. 121068 – 121130 is recommended.
HB and **HE** shanks are available at the same price as HA.
For **HB shanks:** use order **no. 123241**.
For **HE** shanks: use order **No. 123240 + 129100HE**.

HOLEX Pro Steel solid carbide high-performance drill

Straight major cutting edges and a **special flute profile** ensure good chip evacuation. The robust cutter geometry ensures high-performance drilling with good process reliability. A wide range of applications in steel materials thanks to a combination of tough ultra-fine grain carbide and extremely wear-resistant coating.

Note:
Flute length $L_C = L_2 + 1.5 \times D_C$.
HB and HE shanks are available at the same price as HA.
For **HB shanks:** use order **no. 123304**.
For **HE shanks:** use order **no. 123309**.
For process reliability when using the 12×D drill, an initial centre drilling with NC spotting drills No. 121068 - 121130 or HOLEX Pro Steel No. 122501 is necessary.

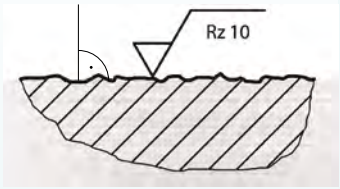
Reliable deep hole drilling in 4 working steps

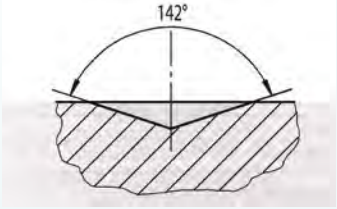
Precondition: Face milling

At a right angle to the hole axis, with the lowest possible **surface roughness.**



1. Centring

NC spotting drill with 142° point angle for **exact pitch or for special applications.**

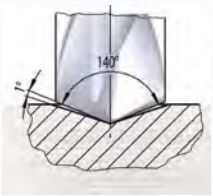


NC spot drilling is advisable for process reliability. (12 1068 – 12 1121)

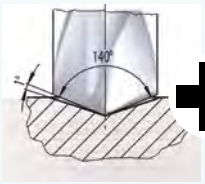
2. Drilling of pilot hole

Necessary for guidance of the deep hole drill in the component. The use of a pilot hole eases the subsequent deep hole drilling operation and improves the tool life of the deep hole drill. The correct generation of a pilot hole is a necessary part of the production technique. It ensures process reliability and reduces the costs.

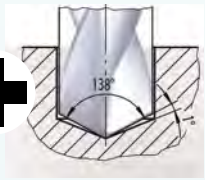
GARANT drilling system:	suitable GARANT pilot drill
Garant MASTER STEEL MICRO 8×D – 30×D (No. 12 1224, 12 1226, 12 1228, 12 1231)	12 1223 For vertical machining and regular and straight surfaces, a pilot hole is not necessary from Ø 1.0 and up to a drilling depth of 12xD.
Garant MASTER STEEL DEEP 16×D – 30×D (No. 12 3888 – 12 3895)	12 2736
Garant HPC deep hole drill ALU 16×D – 30×D (No. 12 3588 – 12 3595) UNI 16×D – 30×D (No. 12 3688 – 12 3695)	12 2606 12 2736
Garant Single-lip drills 500 mm – 1000 mm (No. 12 4002 – 12 4010)	12 2736 23 1605
Garant HPC deep hole drill UNI 40×D – 50×D (No. 12 3740 – 12 3750) Pilot hole and co-pilot hole required!	12 2736 12 3691 Use the co-pilot drill in the same way as a regular deep hole drill (see step 4 – deep hole drilling). Make each hole separately. Ensure chip clearance within the co-pilot hole.



Pilot hole to maximum drilling depth (min. 4×D)



Pilot hole to maximum drilling depth (min. 4×D)

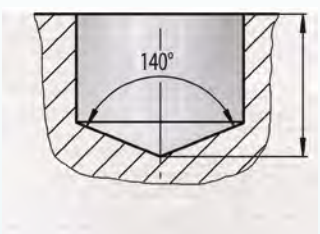


additional co-pilot hole (up to 20×D)

3. Countersinking

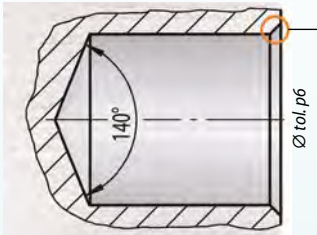
Vertical machining:

Countersink optional, recommended for difficult applications.



Horizontal machining:

After drilling the pilot hole, apply a 90° or 60° countersink.



Countersink necessary

A countersink should be drilled to make the introduction of the deep hole drill easier.

Solid carbide or HSS countersink, green ring or blue ring.

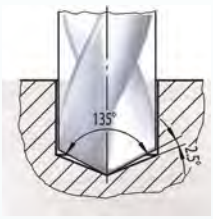
Garant GARANT deep hole drilling

4. Deep hole drilling

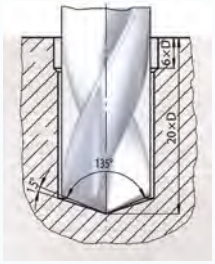
Safety instructions:
No deep hole drills ≥ 16×D may be **operated with max. vc without pilot hole** guidance.

4. a Positioning

Vertical machining:
Introduce the deep hole drill with **anti-clockwise rotation** (optional) and reduced speed (n = 300 rpm) up to 0.5×D before the end of the pilot hole without through-coolant.

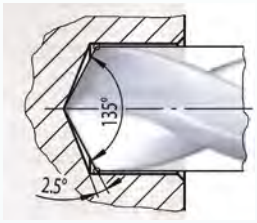


Deep hole drill up to 30×D

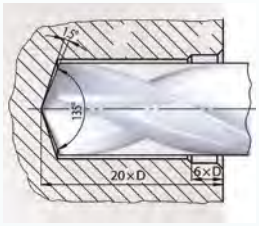


Deep hole drill 40/50×D

Horizontal machining:
Introduce the deep hole drill with **anti-clockwise rotation** and reduced speed (n = 300 rpm) up to 0.5×D before the end of the pilot hole without through-coolant.



Deep hole drill up to 30×D

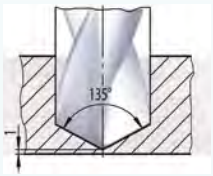


Deep hole drill 40/50×D

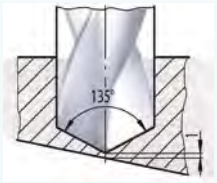
4. b Drilling

Work without a drilling cycle (no chip evacuation necessary). **Switch on the through-coolant and smoothly increase the rotational speed** to the final working value vc. When drilling a through hole, reduce the feed rate approx. 1 mm before the deep hole drill exits the material. In challenging operating conditions and long-chipping material, chip evacuation can increase process reliability. The retraction movement of the deep hole drill should be at pilot hole depth.

Straight material exiting:
Reduce feed rate to 50 %.



Exiting the material at an angle and breaking through into cross holes:
Reduce feed rate to 25 %.



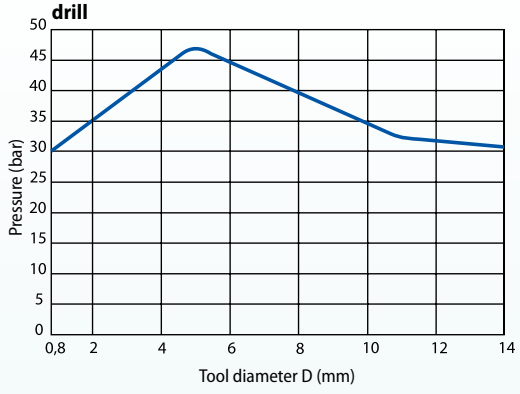
Special features of GARANT single-lip drills (No. 12 4002 – 12 4010)
Single-lip drills **can only be used up to a maximum of 50xD without support**! No reduction in the feed rate required when exiting the material, since the feed rate is always lower during use. **Back out** with reduced speed (n = 100 rpm or less) and reduced feed rate. The appropriate procedure prevents the single-lip drill from vibrating and thus increases the tool life.

4. c Backing out

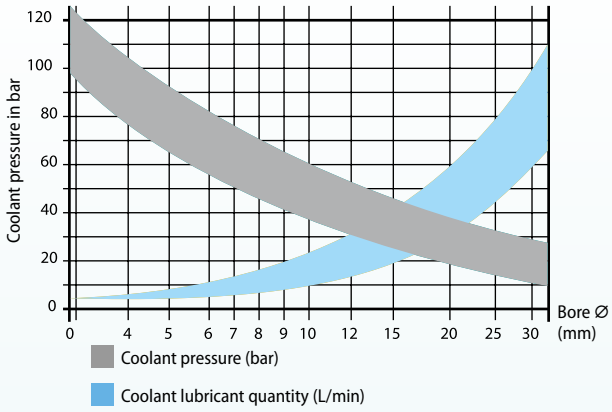
Before backing out the deep hole drill, **switch off the through-coolant, smoothly reduce the rotational speed** (n = 300 rpm) and with **reduced rapid advance** (v_1 = 1000 mm/min) back the drill out of the hole.

Note on cooling

Cooling pressure recommendation for solid carbide jobber drill



Cooling lubricants (guide values)



Garant MASTER STEEL MICRO
(No. 12 1224 – 12 1231)
Ensure there is a coolant pressure **of at least 30 bar** and **sufficiently fine filtration** of the cooling agent (D_c < Ø 2 mm with filter ≤ 0.01 mm, D_c < Ø 3 mm with filter ≤ 0.02 mm).
Work in combination with internal and external cooling to flush chips out of the drilled hole.

Garant Single-lip drills
(No. 12 4002 – 12 4010)
Cooling **is absolutely essential to ensure safe chip evacuation.**
A **minimum pressure of 40 bar** should be maintained.
Higher pressure can stabilise the drill. Emulsion with high oil content (12%) or deep hole drilling oil recommended.

Solid carbide | Standard | h7 | 2 | 135° | h6 DIN 6535 HA | 40 bar | HPC

Garant

Solid carbide HPC deep hole drill

Spiral fluted, with **6 guide chamfers** and internal cooling channels. New generation of high performance deep hole drills in the HPC range.
With 135° point angle and special **h7 cutting edge tolerance** for optimum generation of a deep hole.
High roundness and alignment accuracy of the deep hole.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
For process reliability when using the 16×D deep hole drill, prior centring with No. 121068 – 121121 or 4×D pilot drilling operation with pilot drill No. 122606 is necessary. For deep holes greater than 20×D, a pilot hole with maximum drilling depth with pilot drill No. 122606 is absolutely essential.**The generation of a pilot hole improves process reliability.**

Solid carbide | Standard | h7 | 2 | 135° | h6 DIN 6535 HA | 40 bar | HPC

Garant

Solid carbide HPC deep hole drill

Spiral fluted, with **4 guide chamfers** and internal cooling channels. New generation of high performance deep hole drills in the HPC range.
With 135° point angle and special **h7 cutting edge tolerance** for optimum generation of a deep hole.
High roundness and alignment accuracy of the deep hole.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
For process reliability when using the 16×D deep hole drill, an initial centre drilling with No. 121068 – 121121 or 4×D pilot drilling operation with pilot drill No. 122736 is necessary. For deep holes greater than 20×D, a pilot hole to the maximum drilling depth with pilot drill No. 122736 is absolutely essential. **The generation of a pilot hole improves process reliability.**

Solid carbide | Standard | 2 | h6 DIN 6535 HA | 40 bar | HPC

Garant

Solid carbide HPC deep hole drill

12 3691 – Helical fluted, with **4 guide chamfers** and internal coolant holes. New generation of high performance co-pilot drills in the HPC range.
With 138° point angle and special **j6 cutting edge tolerance** for optimum generation of a co-pilot hole.
High roundness and alignment accuracy of the co-pilot hole.

12 3740/3750 – Spiral fluted, with **4 guide chamfers** and internal cooling channels. New generation of high performance deep hole drills in the HPC range.
With 135° point angle and special **fg6 cutting edge tolerance** for optimum generation of deep holes.
High roundness and alignment accuracy of the deep hole.

Note: Flute length $L_c = L_2 + 1.5 \times D_c$.
To achieve good process reliability with 40×D and 50×D deep hole drills it is absolutely essential to drill a pilot hole with maximum drilling depth with drill No. 122736 and a 20×D co-pilot hole with a co-pilot drill No. 123691.
The generation of a pilot hole improves process reliability.

Solid carbide | Standard | j6 | 2 | 138° | h6 DIN 6535 HA | 40 bar | HPC

Garant GARANT Master Steel Deep solid carbide deep hole drill and pilot drill

Excellent chip evacuation due to the unequal helical pitch of the flutes, guide rings and additional guide chamfers for very high precision when drilling.
Maximum process reliability due to exactly matching tools within the overall system. Drilling up to the maximum depth without a pilot drill.
Significantly increased tool stability due to the substantially strengthened core.
Increased metal removal rates and **outstanding tool lives** lead to an economical high-end drilling process.

Note: Flute length $L_C = L_2 + 1.5 \times D_C$.
For process reliability when using the 16×D deep-hole drill, initial centre drilling with No. 121068 – 121121 or a pilot hole of at least 4×D with pilot drill No. 122736 is necessary. For deep holes greater than 20×D, a pilot hole to the maximum drilling depth with pilot drill No. 122736 is absolutely essential. The generation of a pilot hole improves process reliability. **The specified L/D ratio gives the minimum achievable depth of hole with the respective deep-hole drill.**

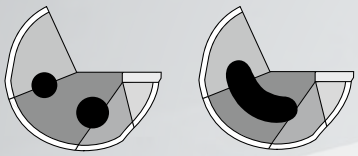
Garant SINGLE-LIP DRILLS

Ideal for small and medium series. Reliable, cost-effective and universal.

Cooling channel bore

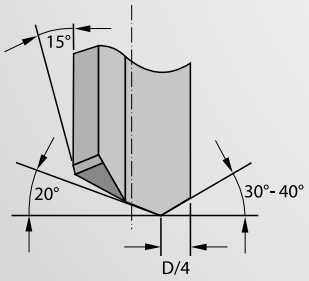
For drill diameters < 7.7 mm, a kidney-shaped cooling channel bore ensures maximum coolant throughput for optimum cooling of the tool and component and for reliable chip evacuation from the bore.



General-purpose use

Due to the universal circumferential shape and special tip geometry on the drill head, close bore tolerances and a small drilling path can be achieved in virtually all suitable materials.

The tools can be used without problems on machining centres up to a drilling depth of 50×D.



Intermediate dimensions

If the respective blank is available, delivery time of approx. 3 weeks for intermediate sizes.

Note

For machining stainless steels, we recommend single-lip drills with chip breaker. These are available on request.

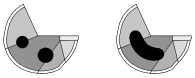
Carbide | Standard | 1 | 125° | DIN 6535 HB | >40 bar | X

Garant

Single-lip drills

Single-edged straight flute deep-hole drill for drilling depths of up to 1000 mm as standard and up to 6000 mm on request. Universally designed circumferential shape of the drilling head enables reliable working in a wide range of materials.

Note: For the reliable use of deep hole drills, a pilot hole of at least 4×D with pilot drill No. 122736 or No. 231605 for larger diameters, or with pilot drill No. 122606 for aluminium, is required. For deep holes > 50×D, the tool must be supported with a rest at intervals of 50×D. The specified L/D ratio gives the minimum achievable depth of hole with the respective deep-hole drill. Flute length $L_C = L_2 + 1.5 \times D_C$. A coolant pressure of > 40 bar is recommended.



Up to Ø 7.7 mm with kidney-shaped coolant channel

Single-lip drills with a total length of 800 mm or 1000 mm are available in the eShop under No. 12 4008 and No. 12 4010.

GARANT Master Steel Feed solid carbide stepped drill, for tapping holes with 90° countersink

For generation of **optimum tapping holes.**
Creates **ideal machining conditions** for the subsequent tapping tool.
The cutter Ø of the drill is matched to the thread that is to be produced, in order to achieve a threads true to gauge and for **high process reliability of the tapping process.**
The 90° countersink for the thread is produced **in the same operation** as drilling the tapping hole.
3-flute drill, specially developed for **use at very high feed rates**.
Outstandingly suitable for machines with high installed power and stable machining conditions.
Drill tolerance (Ø D_1): m7.
First level tolerance (Ø D_2): h7.

GARANT Master Steel Feed solid carbide stepped drill, non-standard sizes, with 90° countersink

Stepped drill, finish ground to your specifications.
For producing a drilled hole and 90° countersink in a single operation.
3-flute drill, specially developed for **use at very high feed rates**.
Outstandingly suitable for machines with high installed power and stable machining conditions.
Drill tolerance (nominal Ø): m7.
First level tolerance (nominal Ø D_2): h7.

Note: Nominal Ø and step length are configurable (freely selectable within the range stated in the table) and ground to specification.

Solid carbide	DIN 8378	Type N	h8	2	140°	h6 DIN 6535 HA	90°

Garant

Solid carbide short stepped drill for tapping holes, 90° countersink

Very sturdy – step length to DIN 8378.
Tight concentricity tolerances between drill and counterbore Ø guarantee exact alignment.

Application: **Particularly suitable for NC machines and automatic machines.**
For drilling tapping holes to DIN 336 sheet 1 with 90° countersinking.
In the following operation, the tap therefore does not have to cut into the sharp edge of the hole.
Sizes **F: Tapping holes** for the following **fluteless taps.**

Solid carbide | Standard | Type N | h7 | 2 | 140° | h6 DIN 6535 HA | 90°

Garant Solid carbide stepped drill for tapping holes, 90° countersink

Drill and counterbore each with its own chip flutes and guide chamfers.
This special design permits frequent regrinding without losing the stepped drill profile.
Countersink angle 90°.

Advantage: Precisely aligned **tapping drill hole and countersink** produced **in a single operation**.
For tapping drill holes.

HiPer drill high-performance drill, right-hand cutting

- Very high feed rates and maximum performance due to optimally matched geometries and materials.
- Precise positioning of the cutter insert due to Vee insert seating and secure clamping by the centre bore.
- High concentricity when assembled. (For holes up to IT9 accuracy)
- Shank support for optimum stability in operation.
  Size 9–12,5 – Created by an additive procedure.

Note: The insert screw must be replaced after every fifth change of cutter insert.
Further sizes up to Ø 50.99 mm available on request.

Further sizes up to Ø 50.99 mm available in the eShop.

Garant Cutter inserts for HiPer drill high-performance drill, Form E 180°

180°

Vee ground cutter inserts for precise positioning and stable seating.
Form E 180° cutter with 142° centre point and 0.5 mm protective chamfer

Application: For through holes for screws to DIN-ISO 273 and countersinking to DIN 74, sheet 2 form H, J and K, medium version.
For screws to DIN 912, 6912 and 7984, ISO 1207 (DIN 84).

Note: Further sizes available on request. Cutting data apply for drilling bodies 5×D.

Carbide

apart from 23 1645 — only 23 1645

Garant

Cutter inserts for HiPer drill high-performance drill, right-hand cutting

Vee ground cutter inserts for precise positioning and stable seating.
Concentricity when assembled ≤ 20 µm. For holes up to IT9 accuracy.

23 1645 – **Special pyramidal point geometry,** optimal spot drilling – even with unstable conditions and long tool overhangs. Such as when processing sheet metal and steel girders. Also suitable for stack drilling.

Note: Cutting data applies for the base body 5×D.
Drill pilot holes exclusively with cutter insert of the same type.
23 1645 – 1×D maximum drilling depth without through-coolant.

Further sizes up to Ø 50.99 mm available in the eShop as configurable material.

Coolant supply ring for MT flat drills with through-coolant.
The coolant supply ring is mounted on the drill. The coolant can be fed from outside via the coolant hose connections through the ring and into the cooling channels.
Suitable for:
23 2277 – **HOLEX flat drills No. 232271 - 232275.**
23 2278/2279 – **Coolant supply ring No. 232277.**

HOLEX

Drill inserts for flat drills

Exchangeable HSS cutter for universal application. Cannot be reground.
With chip breaker. Pointed tip for high stability and self-centring.
For holes up to IT10 accuracy.

Note: Other sizes, version with solid carbide cutting edges and 180° cutting edges, available on request.

SUMOCHAM CHAMDRILL LINE

TECHNICALLY OUTSTANDING LEVEL IN INTERCHANGEABLE HEAD DRILLING.

- **Optimised design** of the globally established CHAMDRILL line.
- **Revolutionary clamping system** for convenient drilling head replacement without screw connections or tool removal.
- **Direct conversion of cutting forces** into clamping forces – without plastic deformation of the joint.
- **Significant increase in productivity and cost-effectiveness** due to drastically extended tool life.
- **Optimal stability** of the drill body with twisted cooling channels.
- **Application-specific drilling heads** in four standard geometries and a wide range of special geometries.

DRILL BODY

 *	**DCN...A –** drill body with drive flat Length range: 1.5 / 3 / 5 / 8×D Diameter range: 6 – 32.9 mm
 *12×D	**DCN...R** – drill body with round shank Length range: 1.5 / 3 / 5 / 12×D Diameter range: 6 – 32.9 mm
	**DCN...C** – drill body with round shank Specifically for lathes Length range: 3 / 5 / 8 / 12×D Diameter range: 4 – 9.9 mm
	**DCNM** – FLEXFIT connection – modular Length range: 3×D Diameter range: 6 – 20.9 mm
	**MNSNT** – deep hole drill body Length range: 200 – 400 mm Diameter range: 10 – 25.9 mm
 + 	**DCNS** – drill body for chamfer application Length range: 3 / 5×D Diameter range: 7.5 – 25.9 mm **CHAMRING –** chamfer attachment or chamfering ring Diameter range: 8 – 25 mm

*** Drill bodies and drilling heads are available directly from the Hoffmann Group warehouse.**

ISO 9766

1.5×D 3×D 5×D

SUMOCHAM high-performance drill, right-hand cutting

SUMOCHAM interchangeable head drilling system for **highly efficient drilling** with interchangeable cutting edges. **Unique clamping mechanism** for convenient fixing of the cutter insert without additional clamping screw. **Versatile material use** due to comprehensive cutter insert range. **Optimum tool stability** with simultaneously helical coolant channels for **high concentricity** and **lowest possible axial run-out** of the bore.

Other available versions:
base body with round shank, base body for machining chamfers on bores when a chamfer ring is attached, base body especially for use in multi-spindle, sliding headstock and production lathes.

Tolerance class: IT8-IT9, concentricity: 0.03 mm.

Delivery of drill body without drilling head. 23 1705

Application: With drilling heads **No. 231740 – 231790.**

Supplied with: Drill body incl. assembly key for drilling heads.

Note:
- Always select a **strategy** with medium cutting speeds and high feed rates.
- **No rapid traverse and no spindle anti-clockwise rotation during retraction.**
- **Drilling convex / concave surfaces:** Radius of curvature > 15 × D_C required, reduce feed rate by up to 50%.
- For **cross holes**, the maximum permissible diameter is 1/4 of the nominal diameter D_C.
- **Stack drilling** requires stable conditions, reduce gaps between workpiece elements.
- **Oblique drill entry and exit** up to 7° inclination possible with reduced feed rate (approx. 20 - 30%).
- Designation convention: **DCN** [size]-[L_1]-[ØD_S]**A**-[L/D]
  Examples:

- **No rapid traverse and no spindle anti-clockwise rotation during retraction.**
- **For drilling depths of 8×D and more, piloting of at least 1.5 × D_C with same cutter insert required.**
- **Drilling convex / concave surfaces:** Radius of curvature > 15 × D_C required, reduce feed rate by up to 50%.
- For **cross holes**, the maximum permissible diameter is 1/4 of the nominal diameter D_C.
- **Stack drilling** requires stable conditions, reduce gaps between workpiece elements.
- **Oblique drill entry and exit** up to 7° inclination possible with reduced feed rate (approx. 20 - 30%).
- Designation convention 8×D: **DCN** [size]-[L_1]-[ØD_S]A-[L/D]
- Designation convention 12×D: **DCN** [size]-[L_1]-[ØD_S]R-[L/D]
- Examples:

Carbide

SUMOCHAM drilling heads for high-performance drill, right-hand cutting

Vee ground drilling head for precise positioning and stable seating. Angled, **radial stop surfaces** for a significant increase in clamping force due to the cutting forces acting during machining. For productive drilling with **high feed rates.**

23 1740 – **ICP**
Main area of application **ISO P, ISO M** (especially duplex) as well as **ISO H**.
Unique cutting edge preparation for the best possible compromise between cutting edge stability and cutting sharpness.

23 1742 – **ICP-2M**
Main area of application **ISO P**. Higher accuracy and better surface quality due to **4 guide chamfers**.
Optimum roundness of the bore, low axial forces, increased stability, increased metal removal rate.

23 1745 – **HCP-IQ**
Main area of application **ISO P** and **ISO K**. **Best possible centring capability**, machining of curved surfaces.
Not for use in ductile materials.

23 1750 – **ICM**
Main area of application **ISO M, ISO S** (especially Inconel and titanium) as well as ISO N.
Cutting edge with negative chamfer and special rounding – especially for stainless steel machining.

23 1790 – **FCP**
Main application **ISO P** and **ISO K**, secondary application ISO M. **Flat head geometry** with centring point.
Advantageous for radial displacement and oblique material exit.

Note: Cutting data applies for the base body 5×D. Drill pilot holes exclusively with drilling head of the same type – in particular for drilling heads FCP and QCP-2M. Please observe the application instructions for the base body.
Cutting tolerance of the inserts: **k7** (positive toleranced cutting edge diameter).
Designation convention: [type] [Ø D_c]-[addition] [cutting material]
Examples:
No. 231740 6.5 ICP 065 IC908
No. 231742 18.5 ICP 185-2M IC908
No. 231745 18.5 HCP 185-IQ IC908

DIN 6535 HE 6595 | MTC | 2×D | 3×D | 4×D

Garant

Universal indexable drill MTC right-hand cutting, with combination shank

High stability and very high process reliability.

23 2302 – With **shank Ø 20 mm,** particularly suitable for **driven tools** (see Group 31).

Application: **For stationary** and **rotating application.**
For holes free of withdrawal scoring and exact dimensional accuracy (approx. ± 0.1 mm).
Also suitable for machines with low drive power.
Especially for **MTC (Multi Task Cutting)** use on the new generation of turning/milling centres **(MTM).**

Note: **CAUTION!**
A disc falls off when the drill exits.
Risk of injury if the component is rotating.
Please take safety precautions.
Counterboring tools with up to 2 steps to your specification available on request.
(Minimum order quantity: 2 pieces).

23 2300

23 2302

ISO 9766 | HPC | 2×D | 3×D | 4×D | 5×D

Garant GARANT Power Drill indexable drill for right-hand cutting, plain shank with drive flats

The helical coolant ducts ensure very high stability, since they do not weaken the core of the drill.

23 4000/4005 – **Bore tolerance:** –0.1 / +0.3 mm

23 4010/4015 – **Bore tolerance:** –0.1 / +0.35 mm

Description: For maximum performance and dimensional accuracy. Even for very difficult drilling situations up to 5×D.

Recommendation:

23 4015 – **When spot-drilling** reduce the feed rate to 70%.

Note: Other intermediate sizes in 1/10 increments available on request.

ABS HPC

Garant GARANT Power Drill indexable drill for right-hand cutting, with ABS® shank

The helical coolant ducts ensure very high stability, since they do not weaken the core of the drill.

23 4020 – **Bore tolerance:** –0.1 / +0.3 mm
23 4025 – **Bore tolerance:** –0.1 / +0.35 mm

Description: For maximum performance and dimensional accuracy. Even for difficult drilling situations up to 5×D.

Application: With indexable inserts No. 234030 - 234098.

Recommendation:
23 4025 – **When spot-drilling** reduce the feed rate to 70%.

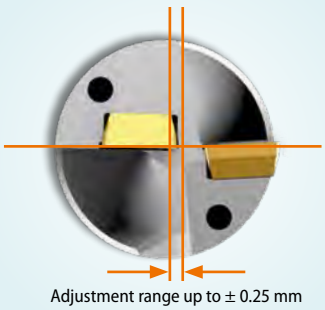
Garant Power Drill – the entire range

Now also with ABS shank, for more stable machining!

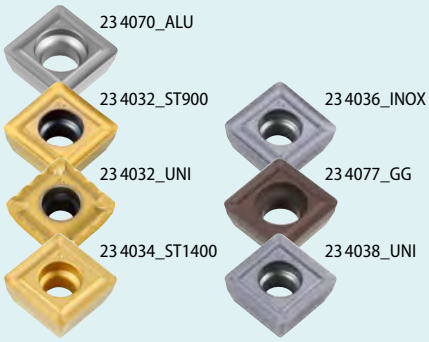
Individual adjustment range
The GARANT Power Drill has an adjustment range of up to ± 0.25 mm from the centre to cover various diameter ranges.

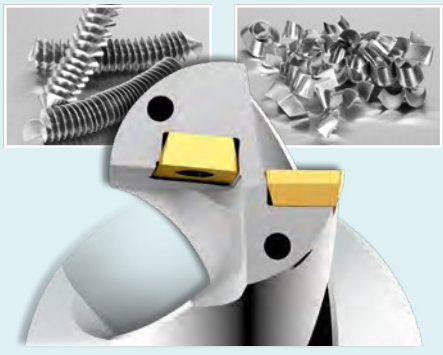
Scope of range:
- Diameter range: 14 – 40 mm
- Length ratio 3×D and 5×D
- ABS50 up to diameter 30 mm
- ABS63 up to diameter 50 mm

Chip evacuation
Due to the larger flutes and the positioning of the cooling channels at the edges of the drill, chip evacuation and stability are significantly increased.



Adjustment range up to ± 0.25 mm





Close bore tolerances:
- 3×D drill: -0.1 / +0.3 mm
- 5×D drill: -0.1 / +0.35 mm

Choice of insert
Suitable inserts and sizes are available for the different machining challenges.

Excellently formed chips for good chip evacuation.

GARANT Power Drill indexable inserts SOGX.. for indexable drill

Suitable for: GARANT Power Drill No. 234000 – 234025.
Recommendation: When spot drilling with holder No. 234015 and No. 234025, reduce the feed rate to 70%.

Note:

ISO 9766 | HPC | 2×D | 3×D | 4×D

HOLEX Pro Drill indexable drill for right-hand cutting, plain shank with drive flat

HOLEX Pro Drill indexable drills combine cost efficiency with technically fully developed capability.
For use up to 4×D in challenging drilling applications.

23 5010 – **Bore tolerance:** -0.05 / +0.3 mm
23 5000/5005 – **Bore tolerance:** -0.1 / +0.25 mm

Application: With indexable inserts No. 235030 – 235082.
Both SOMT inserts for the outer insert seat and also XOMT inserts for the inner insert seat are required.

Supplied with: With insert screws (supplied without indexable inserts).

Recommendation:
23 5010 – When spot-drilling reduce the feed rate to 70%.

23 5010

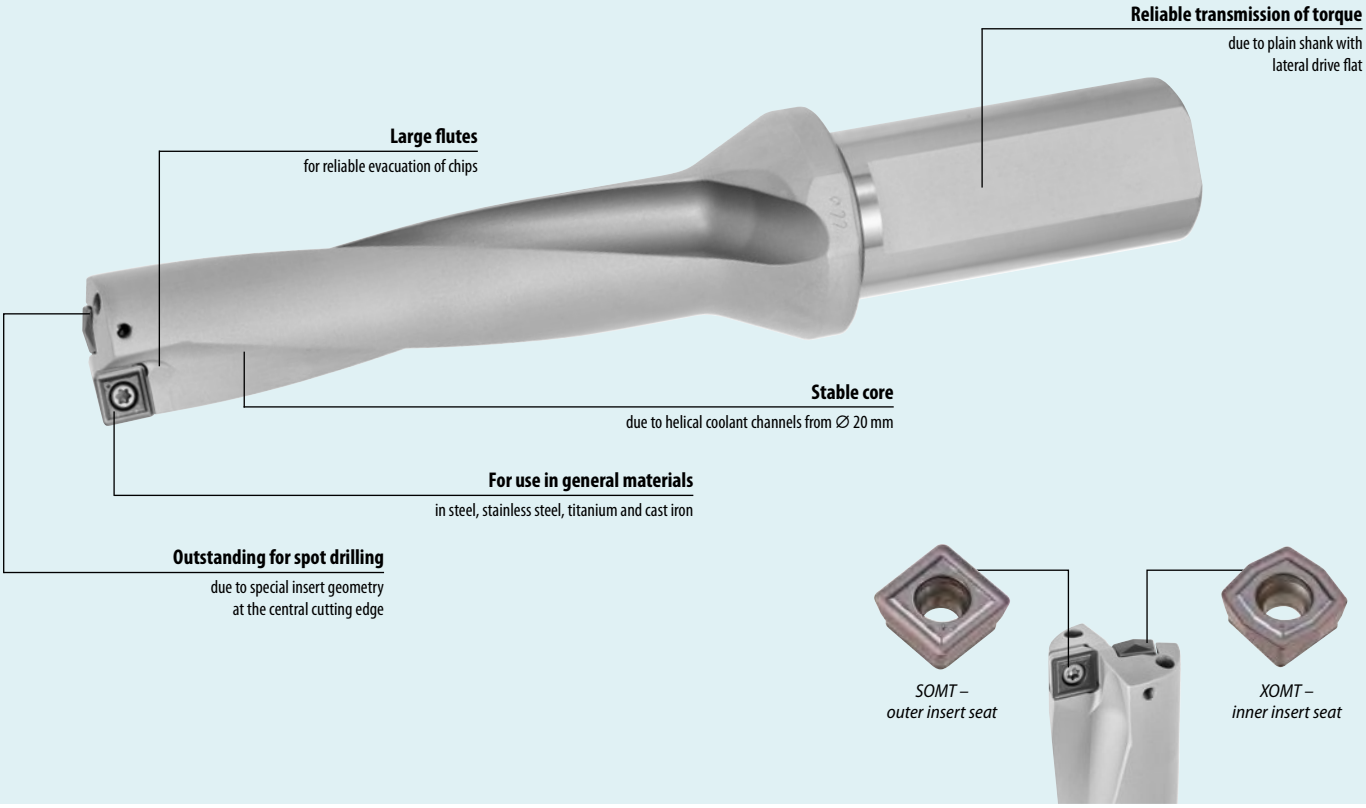
HOLEX Pro Drill – indexable drill

Robust. Reliable. Economical.



HOLEX Pro Drill indexable inserts SOMT.... / XOMT..... for indexable drills

The central cutting edge centres the drill quickly and reliably. The outer cutting edge offers outstanding chip clearance.
Suitable for: HOLEX Pro Drill No. 235000 – 235010.
Application: SOMT inserts exclusively as the outer cutting edges. XOMT inserts exclusively as the centre cutting edge.

ISO 9766 | HPC | 2×D | 3×D | 4×D | 5×D

KOMET HPC indexable drill KUB Pentron® right-hand cutting, plain shank with drive flats

- **Very high performance** and long tool life thanks to optimised base body strength and special surface treatment.
- Best dimensional accuracy under **very difficult drilling conditions.**
- Stock costs reduced because internal and external inserts are identical.
- Offset-axis drilling is possible up to V_{max} = 0.25 mm. Maximum Ø = D + 0.5 mm achievable by offsetting.

23 6601 – **Bore tolerance:** ØD – 0.1 / + 0.3
23 6602 – **Bore tolerance:** ØD – 0.1 / + 0.35
23 6614/6615 – **Bore tolerance:** ØD – 0.1 / + 0.2

Application: ■ **Under extreme machining conditions.**
With indexable inserts No. 236605 – 236610.

Supplied with: Clamp screws (without indexable inserts).

Recommendation:
23 6602 – **When spot-drilling** reduce the feed rate by 70 %.

Note: Version 2×D and 3×D with ABS® also available on request in imperial sizes. Version with PSC shank available on request.

ABS HPC

KOMET KUB Pentron® indexable drill right-hand cutting, with ABS® shank

23 6603 – **Bore tolerance:** D – 0.1 / + 0.3

23 6604 – **Bore tolerance:** D – 0.1 / + 0.35

Application: With indexable inserts No. 236605 – 236610.

Recommendation:

23 6604 – **When spot-drilling** reduce the feed rate to 70%.

Note:
- For use only under **stable** machining conditions.
- Version 2×D and 3×D with ABS® shank available on request.
- **Offset-axis drilling up to V_{max} = 0.25 mm.**
- Maximum Ø = D + 0.5 mm achievable by offsetting.
- Version with PSC shank available on request.

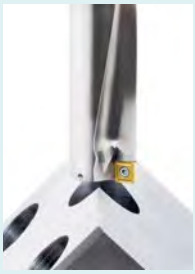
KOMET KUB Pentron® ideal for extreme machining situations

Spot-facing on a weld seam or corrugated surface.

Spot-facing on a step.



Spot-facing on a sharp corner.

Drilling through stacked components.

KOMET Indexable drill KUB Trigon® 3×D right-hand cutting

- Special manufacturing procedure for extremely large flutes with very high rigidity.
- Specific positioning of the indexable inserts for bores free of withdrawal marks and with precise dimensional stability(± 0.1 mm as a rule).
- Internal coolant supply is directed to the cutting edges (sophisticated geometry, ideal for minimum lubrication).
- 3 – 10 bar coolant pressure is sufficient.
- For stationary and rotating applications.
- Offset-axis drilling: dependent on Ø up to 1.5 mm.

Application: With indexable inserts No. 236740 – 237080.

Supplied with: Clamp screws (without indexable inserts).

Note:
- Note! A disc falls off when the drill exits. Risk of injury if the component is rotating! Please take safety precautions.
- **On request** – left-hand cutting; – 2×D, – other Ø; – special types – torsional vibration damper for ABS giving low-vibration machining, with maximum tool life and minimum noise level.

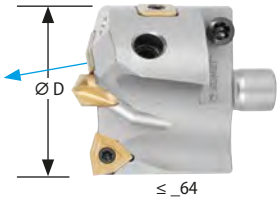
KOMET KUB Centron® indexable drill



≤ _64

≥ _65

- Process reliable up to 8 (9)×D.
- Centring by centring point and slide bars.
- Stiff joint between base body and drill head.
- Ø of the slide bars is matched to indexable inserts with 0.4 mm edge radii. For through holes the Ø of the slide bars can be adjusted by means of shims.

Suitable for: Base body No. 236652 – 236654.

Application:
- For rotating and stationary as well as vertical and horizontal use in all materials.
- With centring tips No. 236655 – 236657.
- With indexable inserts No. 236740 – 237080.

Supplied with: Drill head including slide bars (spare slide bars No. 236658).
From Ø 65 mm with indexable insert cartridges (cartridge for the outer indexable insert adjustable + 1 mm on the Ø).

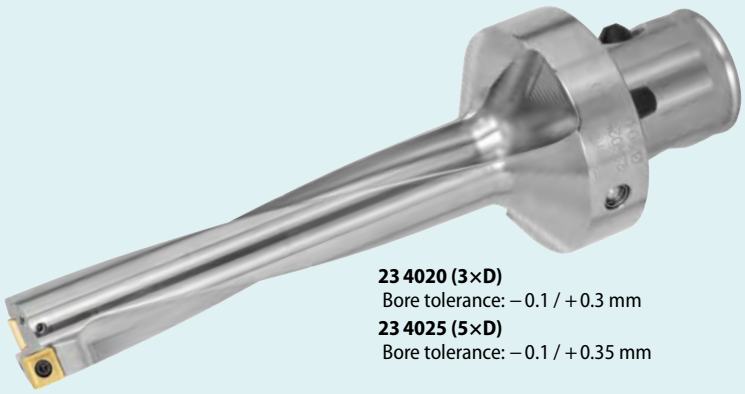
Garant Power Drill – the entire range

GARANT Power Drill indexable drill for right-hand cutting, with ABS interface.

- Optimum torque transmission.
- Low volume in production.
  Helical coolant holes also ensure very high stability, since they do not weaken the core of the drill.

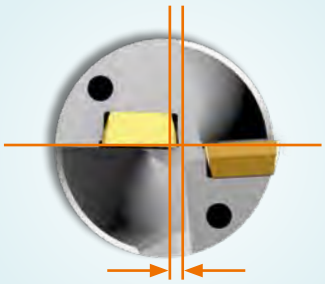


23 4020 (3×D)
Bore tolerance: – 0.1 / + 0.3 mm
23 4025 (5×D)
Bore tolerance: – 0.1 / + 0.35 mm

Scope of range:

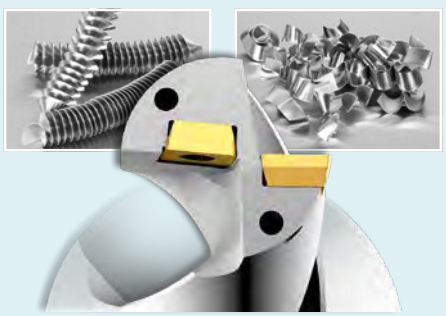
- Covers diameters of 14 – 40 mm.
- Length ratio 3×D and 5×D.
- ABS50 up to diameter 30 mm.
- ABS63 up to diameter 50 mm.

Individual adjustment range
The GARANT Power Drill has an adjustment range of up to ± 0.25 mm from the centre to cover various diameter ranges.



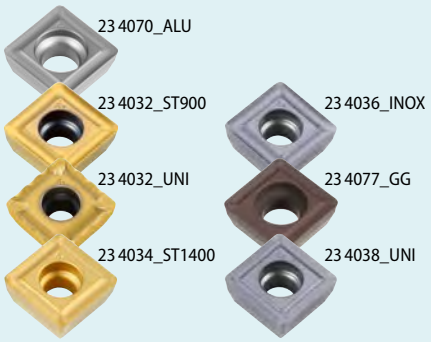
Adjustment range up to ± 0.25 mm

Chip evacuation
Due to the larger flutes and the positioning of the cooling channels at the edges of the drill, chip evacuation and stability are significantly increased.



Excellently formed chips for good chip evacuation.

Choice of insert
Suitable inserts and sizes are available for the different machining challenges.



KOMET Unisix® carbide indexable inserts WOEX.. Type W29

Note: **The standard application values refer to the KUB Trigon®.**
23 6860/6930 – Do not use in the centre pocket of indexable drills!
23 7000/7050 – Due to the special cutter geometry, the inserts can be used only for right-hand cutting KOMET KUB® indexable drill.

Garant Fine boring head ER Ø 39.9 - 70.1 mm (100.1 mm)

23 7501 – The Monoblock System consists of a **boring tool with an integral taper** which is simply screwed on to the existing **ER25 collet chuck.** Quick rough adjustment. **Can be extended with the bridge** No. 237508 to Ø 100.1 mm.

Application:

23 7501 – Adjustment accuracy 0.01 mm on the Ø. Spindle nose with suitable standard ISO insert type **CC..0602.**

Supplied with:

23 7501 – With indexable insert No. 260052 size CU7010.

Spare part:

23 7501 – Insert screw No. 237606 size 1.

Recommendation:

23 7501 – Best with indexable inserts No. 237695 and 237696.

Note:
23 7501 – During the extraction cycle ensure cutting edge orientation ±20°!

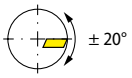
Garant Precision boring sets ER

- **Adjustment accuracy: 0.01 mm per graduation. Adjustment accuracy 0.002 mm on the Ø via vernier.**
- At the 0 position, without tool, balanced to Q2.5 / 6000 rpm.
- Max. speed 10,000 rpm.
- Cooling using a coolant nozzle, optimum coolant pressure 10 – 20 bar, minimum 5 bar.
- Slides radially adjustable with clamp.

Note: During the extraction cycle ensure cutting edge orientation ±20°!



ER25 Ø 39.9–100.1 mm

For Ø range 39.9 - 100.1 mm. **The modular ER precision boring tool can be adapted directly on to the ER25 collet chuck.** Supplied in an ABS plastic case.

Spare part: Insert screw No. 239653 (8IP; 1.28 Nm) for tool cartridge No. 237517 size 1 and size 2.

Note: Suitable indexable insert **CCGT0602..** (for instance No. 237695 / 237696) please order these separately.

Garant Digital display unit for precision boring heads

External digital measuring instrument for GARANT fine boring heads. Electronics and power supply are contained within the display unit, so it can be installed in a **protected area outside** the machining centre.
Simple and secure attachment with permanent magnet.

Advantage: **Suitable for all** GARANT digital boring heads.
No electronics or battery in the boring heads, therefore compact installation can be performed.

Application: **To 0.001 mm (inch)** precise reading **on the Ø.**
Very high repetition accuracy and zero-play fine adjustment due to the **direct travel measurement system** guarantee **optimum measurement reliability and process reliability.**

Supplied with: With spare battery.

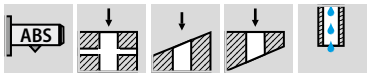
KOMET Micro-adjustable head system B301 and precision boring cartridge M302

Micro-adjustable head



With ABS® connection B301 and accepts M302 precision turning cartridge.
The smallest adjustment is 0.002 mm on the ∅ using the vernier.
Central coolant supply to the cutting edge.

Application: **For bores from ∅ 29.5 to 121 mm.**
For high precision setting, turning cartridge can be adjusted after clamping.

Note:	Please order the suitable precision cartridge No. 238310 (M302) and indexable inserts separately.

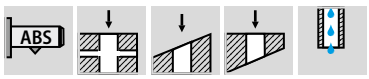
KOMET Micro-adjustable head system M03Speed µm-accurate with balancing ∅ 24.8 to 206.0 mm

Micro-adjustable head



- Dynamic balance in the slide for highest speeds.
- Modular system structure.
- Fine adjustment without additional clamping.
- With ABS® connection for highest changeover accuracy.
- Quick rough adjustment by adjusting the lathe tool.
- Internal coolant supply directed to the cutting edge.
- Smallest adjustment steps in the µm range, within a fine adjustment range of 0.25 - 0.6 mm on the ∅, depending on the turning range.
- Fine adjustment steps of 0.002 mm per graduation in ∅.
- High resolution ensures problem-free adjustment / readability **without** a vernier.

Application:

Size 38–100 – In combination with replaceable bridge No. 238372.

Note: Additional insert holders, e.g. for reverse machining and with other angles = 15°, 30°, 45° etc. available on short lead times.
Please order change-over adapters, cartridges, and indexable inserts separately.

KOMET MicroKom BluFlex® 2 precision boring system with Bluetooth® technology Ø 6 – 125 mm

- Linearity range: -0.2 to +4.4 mm (-0.0079 to 0.1732 inch) on the Ø.
- µ-precise display resolution: 0.001 mm on the Ø.
- Internal hexagon wrench allows radial adjustment and clamping of the micro-adjustable drilling head.
- Modern high-contrast OLED display directly at the micro-adjustable drilling head.
- The display can be rotated through 180°.
- Easy to operate directly at the touch display.
- Additional Bluetooth® low energy interface for easy display on a commercially-available smartphone with Android™ or IOS 7.
- Higher speeds thanks to integral partial balancing.
- Very sensitive adjustment permits precise infeed.
- Absolute travel measuring system – the absolute and relative slide position is output every time the device is switched on.
- Universal ABS® port.
- Battery easily replaceable.
- 1: 1 compatible with the available variations of the previous system.

Countersink 90°

Axial-radial relief ground conical profile for chatter-free deburring and countersinking. This delivers a high-quality countersinking surface. Generous-sized flutes for very good chip clearance. Can be reground easily on the inner flat faces of the flutes.

Size 6 double-ended cutting

High-precision countersink 90° with unequal spacing

90° | HSS | ≠ | 3 | DIN 335 C

All countersinks have 3 cutting edges. Special geometry with extremely unequal spacing and matching cutting edge preparation. Radially relief ground. Flutes ground from solid. Newly developed **special TiAlN coating** for long service life.
High-precision countersink, produced with tight manufacturing tolerances similar to DIN 335-C.

15 0132 – Three **drive flats on the shank** for use in a 3-jaw chuck.

Advantage: Very smooth cutting throughout the entire countersinking operation. Chatter-free running for perfect results and **optimum tool service life.**

Application: High-precision countersinks for production of **exactly round 90° countersunk surfaces.**

Countersink 90°

All countersinks have 3 cutting edges, radially relieved.
Flutes are ground from solid.

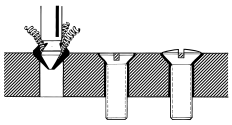
15 0175 – Economy countersink version.
15 0184 – Three drive flats on the shank for use in a 3-jaw chuck.
15 0182/0184 – **HOLEX Pro Steel:**

- Exact machining results in **manual** and **machine use.**
- **Chatter-free running** through **extremely unequal spacing** of the cutting edges for high-quality surfaces.
- Optimum tool life thanks to **TiALN high-performance coating.**
- High **process reliability** due to optimised **chip evacuation**.
- Attractive cost/benefit ratio.

Application: High-precision countersink for chatter-free 90° countersinking.



Three-flute countersinks for accurate centring.

Garant MASTER STEEL HT

MASTERFUL COUNTERSINKS IN STEEL AND CAST MATERIALS.

Up to 1400 N/mm² tensile strength.

- **Impressive performance in Toolox 44 and HARDOX 500.**
- Conditional use in stainless steels, non-ferrous metals and titanium.
- **A wide range of applications in manual mode and in the machining centre.**

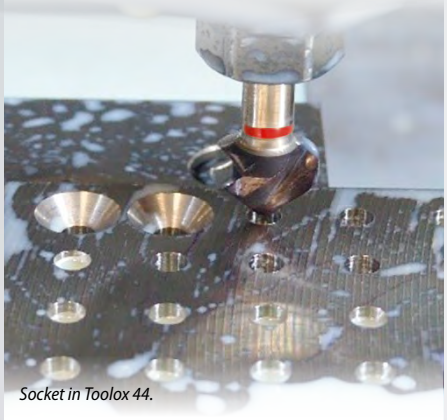
P

K

Excellent countersinking results in Toolox 44 and HARDOX 500.



Socket in Toolox 44.

Available in the diameter range from 6.3 mm to 40 mm.

Two set versions with parallel shank and 3 drive flats – each in sizes 5 and 6.
Individual tools included:

Size 5	6.3	10.4	16.5	20.5	25	
Size 6	6.3	8.3	10.4	12.4	16.5	20.5

GARANT MasterSteel[HT] high-precision countersink 90° with unequal spacing

Countersinks with 3 convex unequally spaced cutting edges for chatter-free countersinking and deburring. Robust design and special geometry with variable pitch of the spiral cutting edges for the highest demands – even in difficult-to-machine materials such as Toolox 44 and Hardox 500. Significantly reduced radial and axial forces. Manufactured with narrower production tolerances than specified by DIN335-C.

Advantage: High self-guidance and stability due to the convex cutting edge geometry. Chatter-free running for excellent results with long tool life at the same time.

Application: High-precision countersinks for production of exactly round 90° countersunk surfaces in steel, cast iron and materials that are challenging to machine. Exceptionally well suited for use on hand-held power drills and single-pillar drilling machines.

High-precision countersink 90° with unequal spacing

15 0388

All countersinks have 3 cutting edges. Special geometry with extremely unequal spacing and matching cutting edge preparation. Radially relief ground. Flutes ground from solid.
Newly developed **special TiAlN coating** for long service life.
High-precision countersink, produced with tight manufacturing tolerances similar to DIN 335-C.

Advantage: Very smooth cutting throughout the entire countersinking operation.
Chatter-free running for perfect results and **optimum tool service life.**

Application: High-precision countersinks for production of exactly round 90° countersunk surfaces.
Very well suited to virtually all materials. Advantage in comparison to HSS countersinks especially in the field of high-tensile steels and because the working life is several times longer.
Shank tolerance h6 - suitable for mounting in hydraulic chucks or shrink-fit chucks.

Extremely unequal spacing (cutting edges arranged at unequal intervals).

60° | HSS | 3 | DIN 334

Garant Countersink 60°

15 0817 – Three **drive flats on the shank** for use in a 3-jaw chuck.

15 0815/0817 – **High-precision 60° countersink with unequal spacing.** **Special geometry with extremely unequal spacing** and matching cutting edge preparation. Radially relief ground. Flutes ground from solid. Newly developed **special TiAlN coating** for long service life.

15 0820/0840 – The chip flutes are ground from solid. Countersink point and circumference are relief ground and cut easily. This results in easy and **chatter-free cutting** for deep countersinking, as well as for deburring or countersinking.

Advantage:

15 0815/0817 – Very smooth cutting throughout the entire countersinking operation. Chatter-free running for perfect results and **optimum tool service life.**

Application:

15 0815/0817 – High-precision countersinks for production of **exactly round 60° countersunk surfaces.**

15 0820/0840 – For chatter-free countersinking and deburring. **Especially suitable for chamfering tapped holes and for countersinking in jig and tool making.**

Modular counterboring system holder

Just 4 holder sizes cover a range from 5 mm to 66 mm (up to 85 mm available on request). Counterbores and solid pilots can be **combined as required** within **one size,** the solid pilot can be changed without removing the counterbore. Hardened and ground. Counterbore and pilot are clamped by one screw each, the counterbore is additionally protected against turning by means of a pin.

Size 1/20; 2/25 – Plain Weldon shank to DIN 1835 B, with internal coolant supply.

Application: **For DIN counterbores,** as well as with appropriate pilot / counterbore combinations for stepped holes or non-standard counterbores.
For stepped through holes pilots are available ex works in 2 lengths so that these holes can be produced without a separate pilot hole drilling operation.

Pilot pin

Fixed guide pin: gas nitrided, precision turned
Rotating pin: surface hardened and ground.
Size 01/2.4 to 1/8.4 – **fixed pilot.**
Size 1/8.5 to 1/18 – **rotating pilot with coolant bore.**
Size 2/11.5 to 2/13 – **fixed pilot.**
Size 2/14 to 2/32 – **rotating pilot with coolant bore.**

Application: When using the rotating pilot (with coolant bore) size 1 and 2 in holder No. 156720 size 1/20 the coolant is fed directly to the cutting edges for optimum chip evacuation.

HSS

Modular counterboring sets in wooden stand

Set of holders, counterbores, and pilots for machining the most common bore ∅.

Application: **For DIN counterbores,** as well as appropriate pilot / counterbore combinations for stepped holes or non-standard counterbores.

Note: Modular counterboring sets also available in HSS with optional TIN coating and brazed-on carbide tips with form "T" ISO inserts.

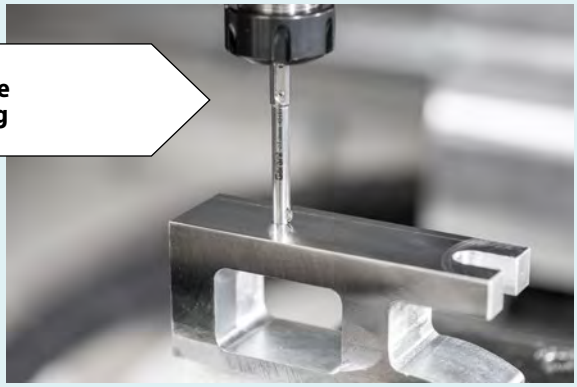
Garant Universal deburring tool

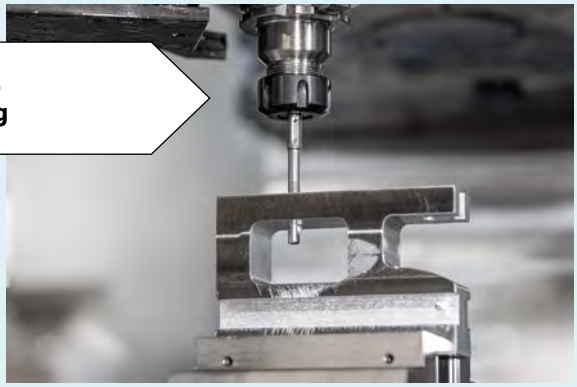
The efficient solution for forward and reverse deburring of holes with a machine.

Front-side deburring



Technical performance:
- Effective and reliable deburring.
- Front and rear machining in a single operation.
- No rotation of the workpiece required.
- Sustainable product concept for series production.
- High process stability and repetition accuracy.
- Special blade geometry protects the bore wall.

Rear-side deburring

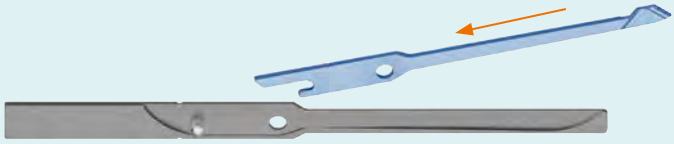


Flexible use:
- Only **two blade sizes** for a standard diameter range from 3 mm to 20 mm and an extended special diameter range from 20.5 mm to 25 mm.
- Deburring of varying bore diameters with spring-mounted blades.
- Deburring of aligned holes in a single operation.

Easy to use and low-maintenance version:
- Spring mechanism for convenient insertion and removal of the blade.
- One screw size for all toolholders.
- No separate tension spring.

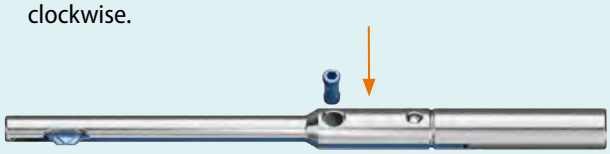
Installing the blade

1. Insert the blade into the slot provided until it reaches the stop pin.



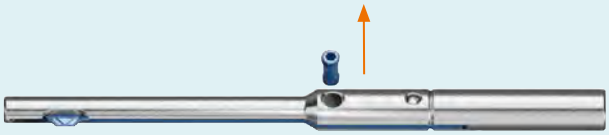
2. Push the blade down into the guide pocket.

3. Lock the blade by turning the fastening screw clockwise.

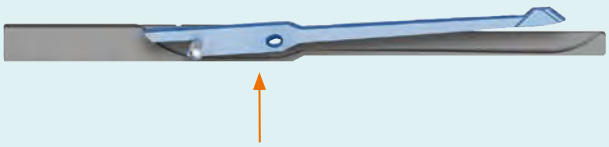


Removing the blade

1. Release the blade by turning the fastening screw anti-clockwise.



2. Press the blade out of the base body through the hole.



3. Pull the blade out of the base body.

Garant Universal deburring tool for holes

Universal deburring tool base body for hole diameters of 3 - 20 mm

For **front and rear deburring** of holes in **one operation. Easy handling** on all machines and **quick changing** of the deburring blades. The deburring tool consists of **a base body, deburring blade and fastening screw.**

Application: Suitable for **table, box column or pillar drilling machines, conventional milling machines** and **CNC machining centres.** Ensure stable clamping conditions. **Not suitable for hand-held machines.**

Note: **Blade not included.** Please order matching blade No. 156775 separately. Fastening screw included. Spare fastening screw can be found under No. 156780.

Size	3	5
15A 15 6775 Blade HSS for universal deburring tool	eShop	eShop
For base bodies	3 – 4.5	5 – 20

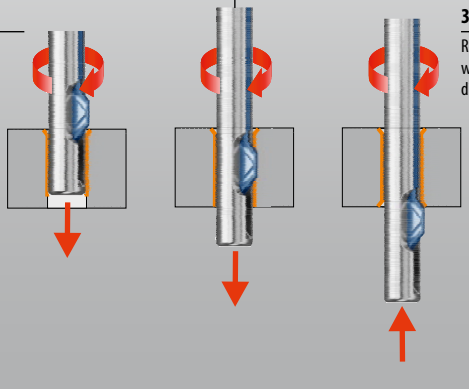
Application notes:

Universal use in the deburring process, efficient and reliable.

1. Forward deburring of the borehole during insertion.

2. Blade moves out of the way through radial pressure on the bore wall. The special cutter geometry prevents damage to the bore wall.

3. Reverse deburring of the borehole when withdrawing under the same direction of spindle rotation.



Blade with spring mechanism

KOMET Countersinks 45° KWS for TOH.0902.. / 1403..

Application: For **deburring** round and long holes and for milling trapezoidal slots.
For countersinking to DIN fine for DIN screws M10 – M20.
Rigid mounting is required (not suitable for power drills).

Note: For suitable triangular indexable inserts see 216700; 216740; 216770.

POWER CARD Garant

Garant Reverse countersinking mill 180° for CPMT 05T1.. / CCMT 0602.. / 09T3.. / 1204..

With just one cutter (z = 1).

Size 15; 18 – Without internal cooling.

Note: Dimension e = programming dimension (information on the end face).

Size 15 – Use GARANT torque screwdriver TQ No. **211750 size 0.9** with bit No. **674248 size TX7**.

Size 18–30 – Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 8IP**.

Size 33–48 – Use GARANT torque screwdriver TQ No. **211750 size 3.0** with bit No. **674252 size 15IP**.

Size 53–76 – Use GARANT torque screwdriver TQ No. **211750 size 5.5** with bit No. **674252 size 20IP**.

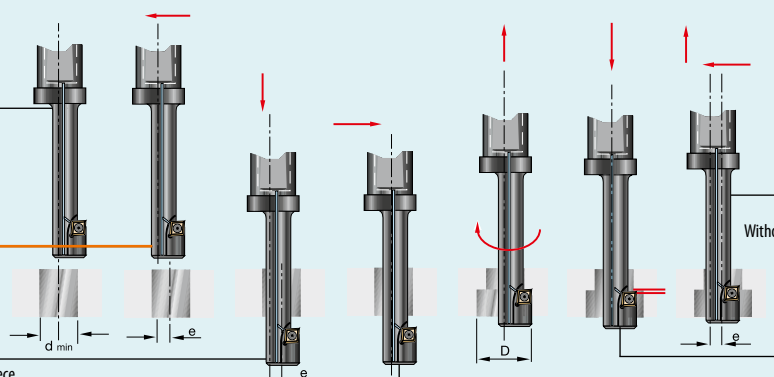
Reverse countersinking mill No. 21 7180 in use – programming amount (e)

1. Position
the tool at the centre of the hole, spindle orientation 0°.

2. Offset
the tool by the programmed amount (e).

3. Plunge
to the position below the lower edge of the workpiece, plus safety clearance. Spindle not rotating!

4. Return
to the centre of the hole by amount (e), then start the spindle.



5. Countersink
to the desired depth.

6. Position
Pull back approx. -0.5 mm in the Z axis. Spindle orientation to 0°.

7. Offset
the tool by the programmed amount (e). Withdraw the milling cutter out through the component.

Garant TOPCUT REAM

Modular reaming for precise and sustainable process design.

- Finish ground for fit IT7.
- System concentricity ≤ 5 µm (when mounted).
- Solid carbide and cermet heads.

239710 239715 239720

● = highly suitable; ○ = suitable only under restricted conditions
The areas of application are starting points for pre-selection.

H7 | HSS | DIN 206 B | 7-8°

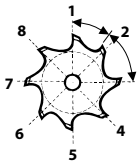
HOLEX Hand reamers

With **left-hand helix** 7 – 8° and long taper lead, more than 1/5 of the cutting length. An even number of teeth with irregular spacing for accurately round holes, free of chatter. The cylindrical ground chamfer on the plain cutting section smooths the hole and guides the reamer.

Application: For through holes (not for blind holes). Also very suitable for interrupted holes.

Note: Hand reamers **finish ground to match your specifications** can be ordered as **No. 160200**.
For suitable tap wrenches see No. 148350; 148200; 148410 and extensions No.149400.

160150



Even number of teeth with uneven spacing – pairs of teeth are exactly opposite each other; e.g. teeth 1 and 5.

120 160175 Hand reamer set No. 160150 in a box H7	eShop
Content: 1 pc. each hand reamer	Size 3; 4; 5; 6; 8; 10

HSS | DIN 859 | 7–8°

160500

Garant Re-adjustable hand reamers

Up to 5 mm with straight flutes; from 6 mm with **left hand helix** 7 – 8°. The reamer body is slit and can be adjusted by approx. 1/100 of the reamer Ø using the expansion screw (e.g. 20 mm Ø = 0.2 mm).

Application: For opening through holes to a slight oversize. Use the straight fluted reamers only in holes which are not interrupted. Make sure that the screw is not left tightened when stored.

Taper pin hand reamers

Conically increasing cutting edges (1 mm over 50 mm length).
Size1.2 – 2.5 – **straight flutes. Form A.**
Size3 – 25 – **helical flutes. Form B.**

Application: For reaming tapered holes by hand for taper pins to ISO 2339 (DIN 1), DIN 258, 1447, ISO 8736, 8737 (DIN 7977, 7978).

Recommendation: The pre-drilled hole is best produced using a straight shank taper pin drill No. 116310.

HOLEX Machine taper pin reamers

With 45° **left hand helix,** evacuates swarf in cutting direction.

Application: **On machines** for tapered through holes.
The peeling twist requires removal of a thick chip (pre-drilled hole must not be too large).
For taper pins to ISO 2339, 8736, 8737 (DIN 1, 7977, 7978), DIN 258 and 1447.

Recommendation: The pre-drilled hole is best produced using a straight shank taper pin drill No. 116310.

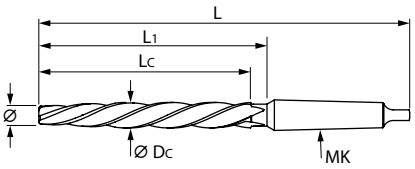
HSS | DIN 311 | 25° | k11

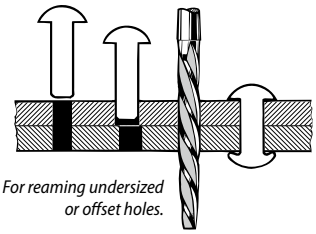
HOLEX Bridge reamers with Morse taper shank

Tapering flute form with a length of approx. 3×nominal Ø. Very sturdy due to strong core and radius heel of flutes. Easy, peeling cut by spiral flutes; number of flutes varies according to the size.

Application: Particularly useful for the installation of components; for reaming offset holes or enlarging rivet holes. Bridge reamers are used on pneumatic hand-held drills in boiler construction.

16 2800





For reaming undersized or offset holes.

Garant Machine face reamers

Chucking reamer cutting on the end face to achieve the most **accurate size possible.** The **optimised end face cutting** enables a **precise alignment fit** of the hole that is produced. Straight flute machine chucking reamers with **long flutes** for optimum chip evacuation.

Application: For production of sequential holes with alignments that exactly match. For the highest demands for straightness of holes. For reaming of through holes and right to the bottom of blind holes.

Note: Note the new shank tolerance h6. No. 162830 Configurable reamers are available in the diameter range from 2.200 to 12.220 mm and for any choice of fit.

Garant

NC machine reamers with whole-number shank Ø

Version suitable for NC similar to DIN 212 **with straight shank Ø** for **standard chucking** especially in **hydraulic chucks** or **high precision collet chucks.**
For **highest concentricity** and **process reliability.**
No need to order special collets.
With long flutes and left-hand helix.
≤ Ø size 1.7 with 3 teeth; ≥ Ø size 1.8 even number of teeth and irregular spacing.
≤ Ø size 3.7 both ends with centre points; ≥ Ø size 3.8 both ends with centre holes.
Reamer manufacturing or cutting edge tolerance to DIN1420 for **H7 bore tolerance.**

Note: For reamers in **1/100 sizes** see **No. 162902.**
For reamers with **diameters and fits to specification** see **No. 162951**

Even number of teeth with uneven spacing – pairs of teeth are exactly opposite each other; e.g. teeth 1 and 5.

NC machine reamer set with whole-number shank ∅

Version suitable for NC similar to DIN 212 **with straight shank ∅** for **standard chucking** especially in **hydraulic chucks** or **high precision collet chucks.** For **highest concentricity** and **process reliability.**
No need to order special collets. With long flutes and left-hand helix.
Even number of teeth with irregular spacing.
Size 3 with centring tip, from size 4 with centre holes at both ends.
Reamer manufacturing tolerance to DIN 1420 for H7 hole tolerance field.
Supplied with: 6-piece NC reamer set in a box.

Garant

NC machine reamers, whole-number shank ∅ in 1/100 sizes with defined tolerance

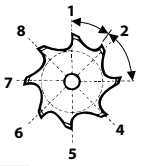
Version suitable for NC similar to DIN 212 **with straight shank ∅** for **standard chucking** especially in **hydraulic chucks** or **high precision collet chucks.** For **highest concentricity** and **process reliability.**
No need to order special collets.
With long flutes and left-hand helix.
Reamers such as 162900, but in 1/100 sizes.
Tolerance specifications:
Size 1.01 – 5.5: Manufacturing or cutting edge tolerance **0 / +0.004 mm**.
Size 5.51 – 12.05: Manufacturing or cutting edge tolerance **0 / +0.005 mm**.
Ordering example:
Desired dia. 6.24 mm – ordering particulars: article number 162902 6.24.
The 6.24 mm reamer with tolerance 0 / +0.005 mm is supplied.
Depending on availability, delivery time is from stock or max. 1 working week.

To determine which diameter you need for your desired fit, please see the following table.
Often one reamer also covers further fits, since the tolerance bands overlap.

Note:	Reamers in whole number sizes and 1/10 sizes for **H7 fit** see **No. 162900.** For reamers with diameters and **fits to specification** see **No. 162951.**

≤ 3.7 mm 16 2902

≥ 3.8 mm 16 2902



Even number of teeth with uneven spacing – pairs of teeth are exactly opposite each other; e.g. teeth 1 and 5.

The quick way to suitable reamers

Article number	Tolerance	orderable nominal ∅	Application	Advantage
16 2900	H7	whole number and 1/10 sizes	For H7 fit tolerances.	Optimally matched to H7 fit tolerances, guaranteed to achieve a long tool life and maintain high accuracy.
16 2902	0 / + 0.004 or 0/ + 0.005	1/100 sizes	For a large number of fit sizes, even outside H7. For a selection of suitable diameters see the table of fits below.	Attractively-priced reamers and quick availability.
16 2951	Configurable (freely selectable)	Configurable (freely selectable)	For any combination of diameter and fit.	The reamers are ground to specification. They are optimally matched to the desired fit tolerance. This results in longer tool life than for 1/100 reamers.

Example for fit 11F7:
Reamers 16 2951 (size 11F7) that are ground for a specific fit lie in the upper part of the range and thus have a larger play for wear before they reach the wear limit.

In comparison to these the new reamer 16 2902 (size 11.02) has a somewhat smaller lower play.

Advantage: Attractive price and short lead times

Garant NC machine reamers with whole-number shank Ø, non-standard sizes and fits

Reamers finish ground to match your specification.

Note: For **fit H7** see No. 162900 and 163000.
For reamers in 1/100 - sizes see No. 162902.

16 2971

Garant NC machine reamers, whole-number shank Ø

With long flutes and left-hand helix.
Reamers finish ground for fit H7.
Application: Especially for deeper holes.
Also suitable for blind holes.

H7 | HSS E | DIN 212 B | h9

16 3000 ≤ 3.7 mm

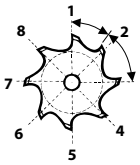
16 3000 ≥ 3.9 mm

Garant Machine reamers plain shank

With long flutes and left-hand helix.
From size 1.8 even number of teeth and uneven spacing.
Up to size 3.7 both ends with external centres;
from size 3.9 both ends with internal centres.
Reamers finish ground for fit H7.

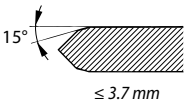
Application: For reaming through holes.
Also suitable for blind holes (from 3.9 mm Ø) due to short chamfer lead.

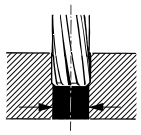
Note:
- Straight flute machine chucking reamers – available ex-stock.
- **For reamers with other diameters and fits see No. 162951.**



Even number of teeth with irregular spacing – pairs of teeth are exactly opposite each other; e. g. teeth 1 and 5.

Chamfer lead forms:





Correct undersize for pre-drilled holes can be found in the machining handbook.

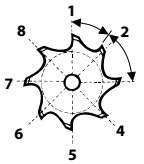
HSS E | DIN 208 B | 7–8°

HOLEX Machine reamers with Morse taper shank

Even number of teeth with irregular spacing. The hole is accurately round and free of chatter marks. The cylindrical ground land on the plain cutting section smooths the hole and guides the reamer. With Morse taper shank.

Application: For reaming through holes, as the chips are evacuated in the cutting direction. Also suitable for blind holes due to the short chamfer lead.



Even number of teeth with uneven spacing; two teeth are exactly opposite each other, e.g. 1 and 5.

H7 | Carbide K10 | DIN 8093 | h6

Garant Carbide machine reamers

Long flutes, left-hand helix.
Extremely irregular spacing (EU) from size 2.
This ensures that the reamed bore is absolutely round and free from chatter marks.
Size 1–3,5 – With centring tip.

Tool material: Sizes 1 – 13 **solid carbide.**
Sizes 14 – 16 with **carbide inserts,**
supported by hard nitrided steel guide chamfers.

Application: On stable, low vibration machines.
Longer tool life and better dimensional accuracy than HSS reamers.

16 4500

Solid carbide | Standard | h6 DIN 6535 HA

H7 | 0 +0.004

Ø ≤ 0,9

Garant Universal solid carbide NC machine reamers

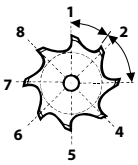
Version suitable for NC similar to DIN 8093 **with straight shank Ø** for **standard chucking** especially in **hydraulic chucks** or **high precision collet chucks.**
This ensures **the highest concentricity**.
Tolerance specifications:
Size 0.6 – 0.9: Manufacturing or cutting edge tolerance **0/+0.004 mm.**
Size 0.98 – 20: Reamer manufacturing or cutting edge tolerance to DIN1420 for **H7 bore tolerance.**
No need to procure special collets when using GARANT-NC reamers.
With long flutes and left-hand helix.

Application: For reaming through holes, as the chips are evacuated in the cutting direction. Lead taper is suitable also for blind holes.

Note: For reamers like No. 164340 and 164341 but with other diameters and fits see No. 164344 and 164345.

164340

164341



Even number of teeth with uneven spacing – pairs of teeth are exactly opposite each other; e.g. teeth 1 and 5.

Universal solid carbide machine reamers, non-standard sizes and fits

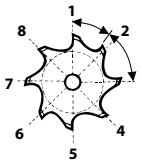
Version suitable for NC DIN 8093-2 **with straight shank** Ø for **standard chucking** especially in **hydraulic chucks** or **high precision collet chucks.**
This ensures **very high concentricity** and **process reliability**,
The use of GARANT-NC reamers eliminates the need to procure special collets.
With long flutes and left-hand helix.
Reamers finish ground to match your specification.

Application: For reaming through holes, as the chips are evacuated in the cutting direction. Lead taper is suitable also for blind holes.

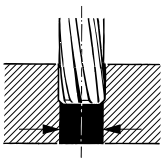
Note: For H7 fit see No. 164340 and 164341.

164345

164344



Even number of teeth with irregular spacing – teeth are exactly opposite each other; e. g. teeth 1 and 5.



The correct undersize for pre-drilled holes can be found in the machining handbook.

HSS | Standard | 25 bar | h6 DIN 6535 HA | HPC | H7

Garant

Through hole / blind hole HSS high-performance reamers, non-standard sizes and fits

Version suitable for NC with straight shank Ø for the standardised toolholder, specially in **hydraulic chucks** or **high-accuracy chucks.**
This ensures **very high concentricity** and **process reliability**.
It is no longer necessary to procure special arbors.
With internal coolant feed for **HPC use** to reduce production costs.
With short, straight flutes.
Tolerance specifications:
Configurable: Reamers finish ground to match your specification.
H7: Version to DIN1420 for H7 bore tolerance.

Application:

16 4358 – For **HPC/HSC reaming** of **through holes.**
16 4359 – For **HPC/HSC reaming** of **blind holes.**

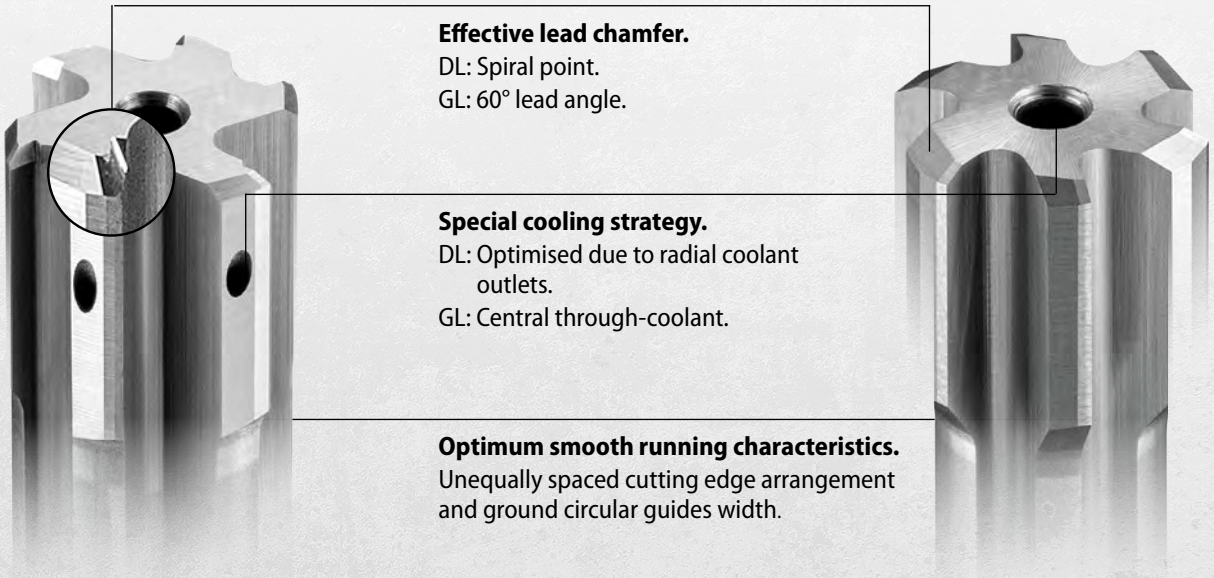
The GARANT Master families in high-performance reaming.

Increase efficiency and experience process reliability.

The comprehensive tool selection from the Hoffmann Group enables very high cutting performance – even in materials that are difficult to machine and hardened. The high-performance reamers GARANT Master Steel, GARANT Master Alu and GARANT Master Titan are setting new benchmarks in terms of performance and pricing. The respective variants for machining through holes and blind holes are available for optimum machining results.

Through hole (DL)

Blind hole (GL)



Effective lead chamfer.
DL: Spiral point.
GL: 60° lead angle.

Special cooling strategy.
DL: Optimised due to radial coolant outlets.
GL: Central through-coolant.

Optimum smooth running characteristics.
Unequally spaced cutting edge arrangement and ground circular guides width.

Garant MASTER ALU

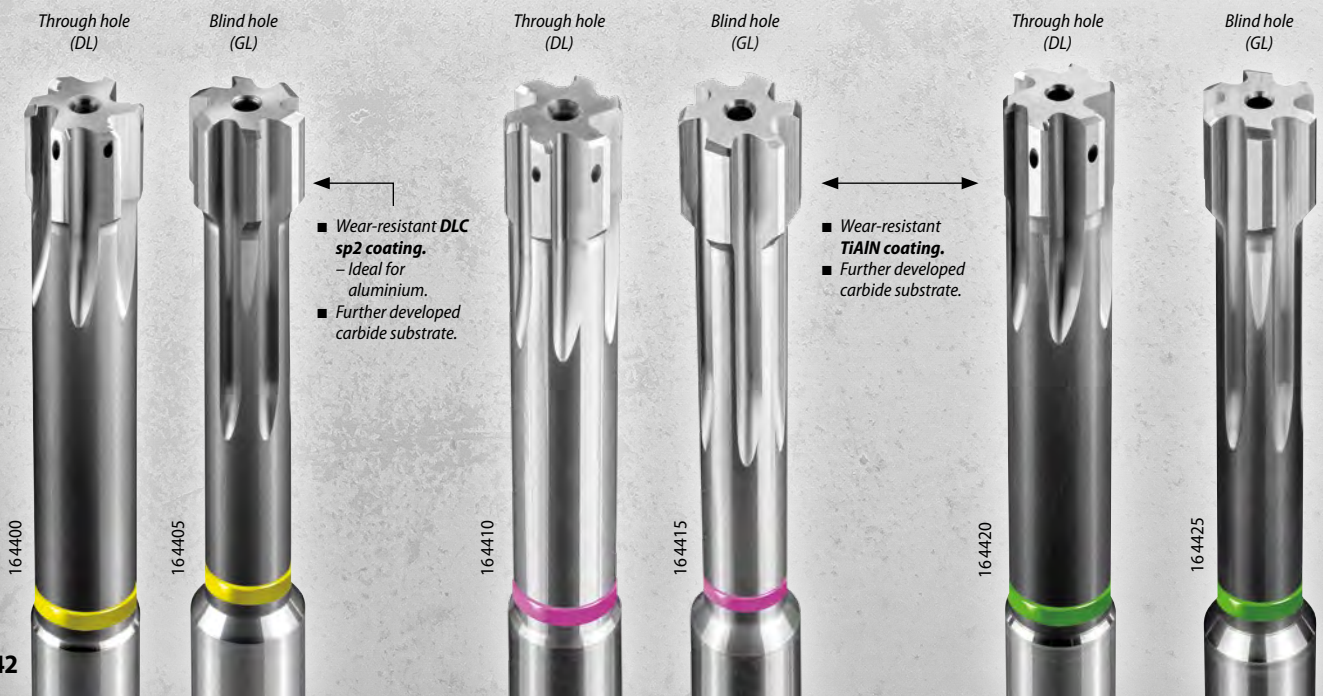
Our solution for aluminium.

Garant MASTER TITAN

The master for titanium and titanium alloys.

Garant MASTER STEEL

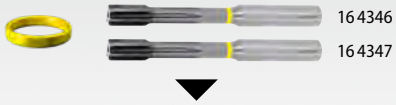
The universal solution for machining steel and stainless materials.

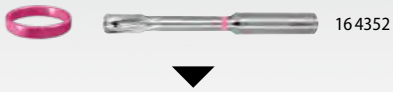


- *Wear-resistant **DLC sp2 coating.** – Ideal for aluminium.*
- *Further developed carbide substrate.*

- *Wear-resistant **TiAlN coating.***
- *Further developed carbide substrate.*

No longer in the portfolio.





Current portfolio.

- Patented cooling strategy.
- Innovative geometry.
- Universal, configurable and delivered quickly.
- Best price-performance ratio.

= Master Performance in high-performance reaming.

Impressive test results:

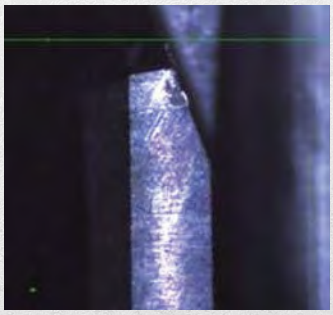
Test in 42CrMo4, v_c = 180 m/min, f = 1.7 mm/rev, machining depth = 3×D

Competitor 1

Competitors with aggressive pricing policy – after **84** through holes.

Competitor 2

Garant MASTER STEEL



840 through holes.

Garant MASTER STEEL

840 blind holes.

Tool	Material	Cutting data	Reaming oversize in Ø (mm)	The result
164425 8H7	1.2379 / X155 CrVMo 12	v_c = 150 m/min f = 1.4 mm/rev	0.2	Tool life ends after 2000 fits.
164420/25 12H7	1.7131 case hardened to 60 HRC	v_c = 10 m/min f = 0.12 mm/rev	0.1	Tool life ends after 40 fits.
164420/25 10H7	1.7131 16 MnCr5	v_c = 180 m/min f = 1.2 mm/rev	0.2	Test ends at 400 fits.
164410/15 12	3.7164 / TI6 AL4V	v_c = 20–30 m/min f = 0.2–0.6 mm/rev	0.1	Good R_z values of around 2µm, very low wear in the µm range. Tool has an optimised geometry to prevent heat generation.
164400/05 12	3.3547 / AlMg 4.5 Mn 3.4365 / AlZn 5.5 MgCu	v_c = 250 m/min f = 1.5–2.4 mm/rev	0.2	R_z values of 1.3–1.7 with good chip formation and chip evacuation.

Hoffmann Group Tool Tip:

- Uncompromising machining of steel and stainless steel with the GARANT Master Steel high-performance reamer.
- When performing high-performance machining, pay attention to the tool run-out in the machine (not greater than 5 µm) in order to achieve attractive machining results.
- If necessary, reduce the retraction speed to avoid the formation of grooves on the wall of the hole.
- If necessary, you can adapt the cutting data to the capabilities of your machine.
- For convenient and quick removal of chip buildup on the reaming tool (e.g. in 1.7131and 1.4301), please note our extensive range of hand tools!

Solid carbide | Standard | Type W | 25 bar | h6 DIN 6535 HA | HPC

GARANT Master Alu solid carbide high-performance reamers for through / blind hole, non-standard sizes and fits

Special HPC reamers of the latest generation, **for machining aluminium**, with improved tooth geometry and further developed carbide substrate. Extra-short teeth for increased cutting performance values. Optimised cooling strategy with radially arrangedcoolant outlets aligned directly to the teeth.
Version suitable for NC with straight shank ∅ for standard arbors especially in **hydraulic chucks** or **high precision collet chucks**. Very high concentricity and process reliability due to unequal spacing of the teeth and special profile of the round chamfer width.
Version with DLC coating ta-C.
Tolerance specifications:
Configurable: Reamers finish ground to match your specification.
H7: Version to DIN1420 for H7 bore tolerance.

Application:

16 4400 – Special version for through holes.
16 4405 – Special version for blind holes.

Solid carbide | Standard | 25 bar | h6 DIN 6535 HA | HPC

Garant GARANT Master Titan solid carbide high-performance reamers for through / blind hole, non-standard sizes and fits

Special HPC reamers of the latest generation, for **machining titanium,** with improved tooth geometry and further developed carbide substrate. Extra-short cutting edge for increased cutting performance values. Optimised cooling strategy with radially arranged coolant outlets aligned directly to the teeth.
Version suitable for NC with straight shank dia. for standard arbors especially in **hydraulic chucks** or **high precision collet chucks.** Very high concentricity and process reliability thanks to unequal spacing of the teeth and special profile of the round chamfer width.
Tolerance specifications:
Configurable: Reamers finish ground to match your specification.
Application:

16 4410 – Special version for through holes.
16 4415 – Special version for blind holes.

Note:	Delivery time: 4 weeks.

Solid carbide | Standard | 25 bar | h6 DIN 6535 HA | HPC

GARANT Master Steel solid carbide high-performance reamers for through / blind hole, non-standard sizes and fits

The latest generation of **universal** HPC reamers. Extra-short teeth for increased cutting performance values. Optimised cooling strategy with radially arranged coolant outlets aligned directly to the teeth.
For uncompromising applications in steel and stainless steel. Reliable machining of high-tensile steels **up to 60 HRC. Version suitable for NC** with straight shank ∅ for standard arbors especially in **hydraulic chucks** or **high precision collet chucks.**
Very high concentricity and process reliability due to unequal spacing.
Tolerance specifications:
Configurable: Reamers finish ground to match your specification.
H7: Version for H7 bore tolerance.
0/0.005 mm: Manufacturing or cutting tolerance of nominal ∅ D_C.
Application:

16 4420 – Special version for through holes.
16 4425 – Special version for blind holes.

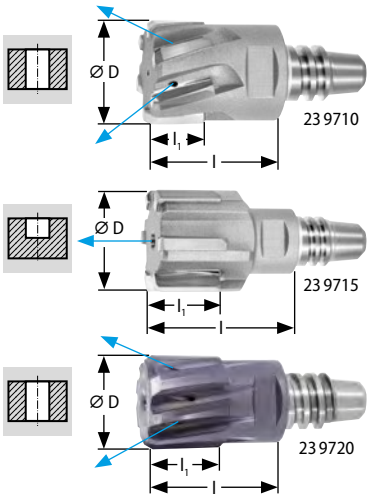
Standard | H7 | HPC

Remaining stock available via e-shop – only while stocks last. Solid carbide reaming heads for steel (blind hole No. 23 9725) and INOX (through hole No. 23 9730, blind hole No. 23 9735).



Garant TopCut REAM reaming heads

Interchangeable head reamer system **finish ground for fit IT7.**
Cutter geometry matched to the application.
System concentricity ≤ 5 µm (depending on the head and holder) when mounted.

23 9715 – With short, straight flutes.
23 9710/9720 – With short flutes and left-hand helix.

Application: For HPC/HSC reaming.
23 9715 – **For blind holes.**
23 9710/9720 – **For through holes.**

Note: **Total usable length** = L_1 (arbor No. 239740 / 239745) + l (interchangeable head No. 239710 to 239720).
Suitable assembly wrench No. 219987. Insert for torque wrench No. 219986.
Further sizes available on request.

Garant TopCut REAM reaming head arbors

Version suitable for NC with straight shank Ø for standard arbors especially in **hydraulic chucks** or **high precision collet chucks**for very high accuracy and process reliability.

Note: Observe the mounting size of the holder and reaming heads.
For further arbors see No. 210550 – 210582 and No. 212000.

New products – Thread machining

NEW

We use this symbol to tag new items in our range of catalogue products

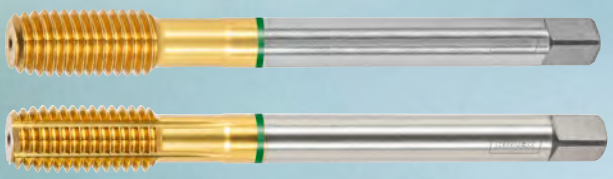
Garant VAP TAP

Page **280 / 283 / 288 / 293 / 310 / 313 / 317 / 323**
GARANT Vap Tap – universal taps for a wide range of materials.
Surface vaporized M / M-LH / MF / G for blind and through holes

Garant VAP TAP

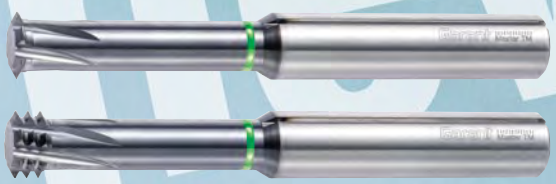
Page **365 / 366**
GARANT Vap Tap – Machine tap sets with and without core drill.
M for blind and through holes; M3-12

HOLEX Pro Form



Page **332 / 333 / 336 / 337**
HOLEX Pro Form machine taps –
powerful taps for use in a wide range of materials.
Models with and without oil grooves M / MF / G

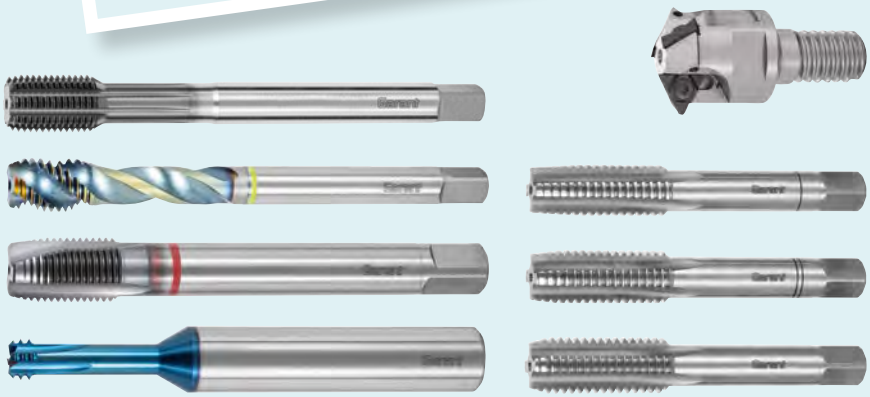
Garant MASTER TM



Pages **341 – 343**
GARANT Master TM single and three-profile thread mills.
Newly developed universal geometry and high-performance coating for use in a wide range of applications.
M / M-LH / UN / UN-LH / MF / MF-LH / EG-M / EG-M-LH / G / G-LH / EG-G / EG-G-LH

Machining – Threads

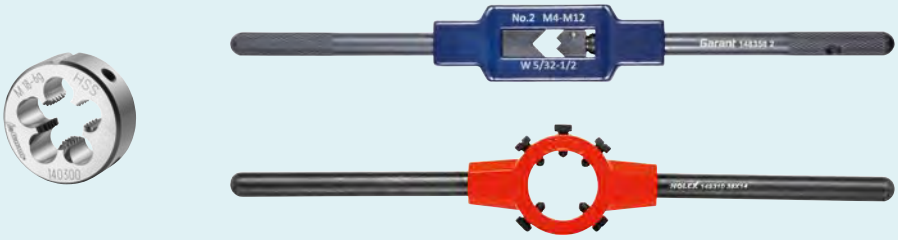
Machining/clamping technology for optimal processes.
Now sorted by **application**
drilling, tapping, milling, turning and clamping.



Garant HOLEX

Taps, fluteless taps, thread milling cutters
Overview pages 250 – 255

13 250 – 356



Garant HOLEX

Dies, thread cutting tool sets, holders, holder set

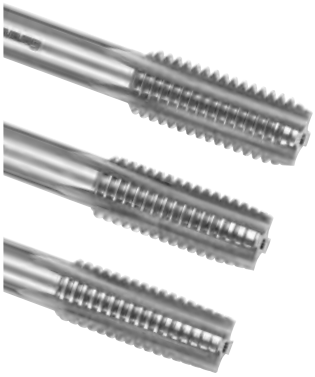
14 357 – 369

Further thread-cutting tools in the chapter Turning, pages 831 – 855

Garant **Overview of taps**

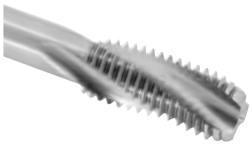
Which tap is suitable for your application?

Discover at a glance which tap is suitable for your application.
Whether you are tapping by hand, or a single pillar drilling machine or on your modern machining centre, the range of taps from the Hoffmann Group will always offer you the right tool.



Hand tap

For tapping or cleaning existing threads by hand.
Set of three, consisting of taper, second and plug tap, or set of two, consisting of taper and plug tap.
Mounting in an adjustable **tap wrench** or **toolholder.**



Conventional

For use on conventional machines such as drilling machines, lathes and milling machines. A high degree of self-guidance and a distinct guide thread section are the features of these tools, which permit their use under unstable machine conditions.
Mounting in the **axial tapping head** or **tapping chuck with compensation.**

Dynamic

Cost-effective machining for highly demanding work.
High-performance tool materials and modern coatings permit long tool lives and a high degree of process reliability.
Particularly suitable for CNC machines.
Mounting in the **tapping chuck with length compensation** or **minimum length compensation (MLA).**

Synchronous

Very high performance, for use on machines with synchronised spindles.
Reduced self-guiding and a high-performance tool material coating combination permit extremely high cutting speeds combined with very long tool life.
Mounting in the **tapping chuck with minimum length compensation** or **rigid clamping.**

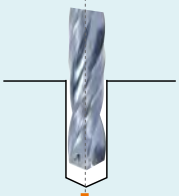
Thread generation to good process reliability

The steps to a thread that satisfies the gauge.

The generation of a correct thread requires not only the cutting of the thread itself but also several preparatory and subsequent operations. This begins with selection of the correct core hole diameter and ends with the checking of the finished thread.

Core hole

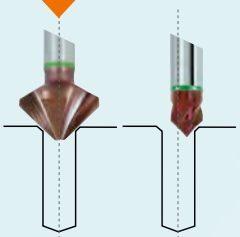
Pre-drilling
The twist drill creates the core hole for the thread-cutting tool.



Pre-drilling and countersinking in a single operation
The new GARANT Master Steel FEED stepped drill creates the 90° countersink for the thread in a single operation together with drilling the core hole.

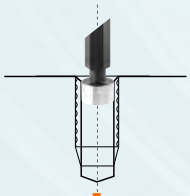
Countersinking
The protective countersink facilitates the entry of the following thread-cutting tool. It can also increase tool life.

Chamfer
The threaded chamfer facilitates the entry of the following thread-cutting tool. It can also increase tool life.



Check the core hole drilling

Check the tapping diameter.
Check the surface quality.
Check for machining residues.



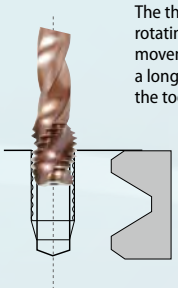
End cutting thread milling

End cutting thread milling
There is no need for pre-machining. The core hole, protective chamfer and thread are generated in one machining step.

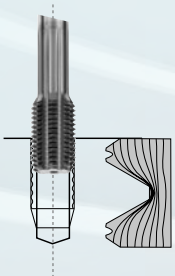
Generating threads

Tapping

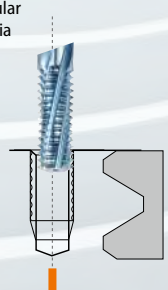
The thread is generated by a rotating movement of the spindle and a longitudinal movement of the tool axis.



Thread forming

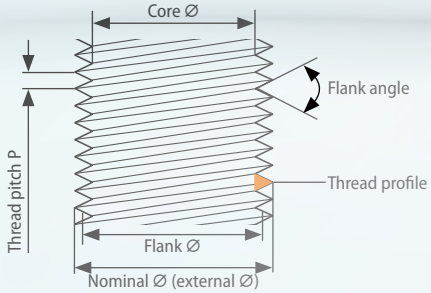


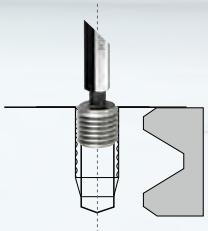
Thread milling
The tool executes a circular movement performed via the CNC machine, generating the desired thread pitch.



Gauging the thread

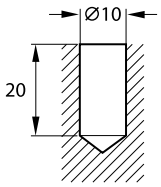
The thread plug gauge tests the cut internal thread for the effective diameter, pitch deviation, part flank deviations and form profile, as well as for the minimum external diameter.





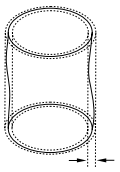
Core hole drilling – important component of a thread.

Core hole drilling is not just part of a thread, it also enormously influences the thread machining process and the service life of the thread-cutting tool.
Taps and fluteless taps can only work reliably if certain important rules are adhered to during the preparatory work stage.

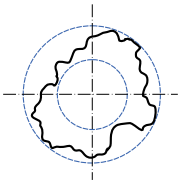


Core hole diameter / length

Straightness

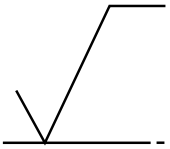


Key criteria for the core hole for thread generation to good process reliability



Roundness

Surface



Tolerance situation

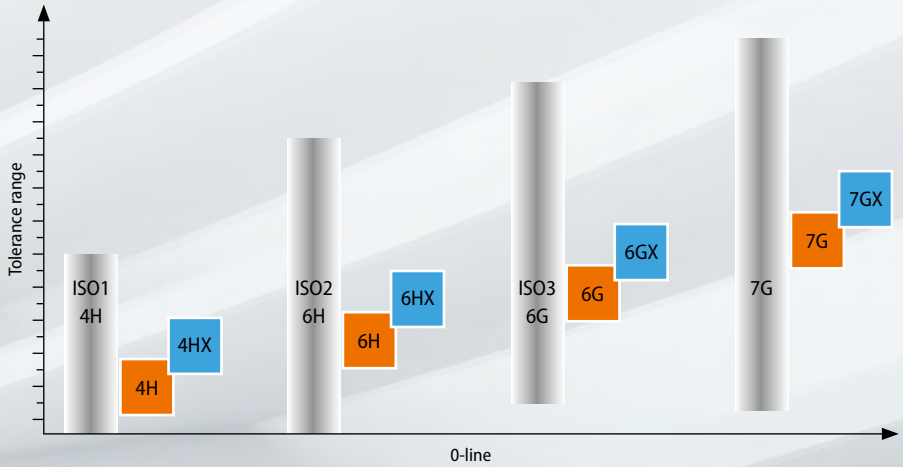
Taps/fluteless taps

The tolerance band of a tap or fluteless tap is significantly narrower than the permissible tolerance range of the finished thread.
The tolerance is designed so that a correct thread is generated from the start. The tool wears in service and eventually reaches the point where the correct thread profile can no longer be produced: The thread is now smaller than the lower tolerance of the "Go" gauge.
The tolerance for the tap or fluteless tap could then be positioned at the upper part of the internal thread area. Here there is, however, the risk of producing an oversized thread which is above the upper limit of the "No Go" gauge.
Taps or fluteless taps with "X" tolerance used on materials that have no problem with oversize are positioned higher in the tolerance zone. The result is longer tool life as a result of higher wear tolerance.

Thread mill

The tolerance of the thread mill has no effect on the tolerance situation of the thread to be produced. The required tolerance is governed by the machine tool and is generated by a circular movement of the tool. Tool wear can be compensated by programming.

Schematic diagram of common metric production tolerances



Permissible effective diameter tolerance range of the internal thread.

Permitted effective diameter tolerance range of a tap/fluteless tap made to **DIN EN standard.**

Permissible effective diameter tolerance range of a tap/fluteless tap produced to the **Factory standard.**

Avoid incorrect cutting, especially with small threads!

Our adjustable GARANT micro tap wrench with round vial permits exact axial guidance when cutting by hand, even for the smallest threads.

Garant

GARANT micro tap wrench, adjustable

- Permits precise perpendicular guidance.
- Removable round vial with magnetic fastener for visual alignment.
- Can also be used for direct mounting in a die stock 14 9310_25×9.
- Suitable for hand taps size M1–M3.

All further product information can be found in our product group Retaining Tools Group 14 or in the e-shop.

Vision is our most valuable sense. Protect it! Safety glasses – VOLUME 4

Around 85% of the impressions perceived by your senses are received by our eyes.
So it is more important than ever to protect our eyes against any sort of negative influences.

Safety glasses for every challenge.
We offer the right safety glasses for every situation. Our range includes a wide range of models that meet the highest safety standards while being very comfortable to wear – whether you need safety glasses with side arms, over-specs, safety goggles or prescription safety glasses.

All further product information can be found in our **eye protection** product group in **Volume 4** or in the **eShop**.

M | 60° | HSS E-PM | Standard | DIN 13 | ISO 2X 6HX | B 4 | h9 | ≤4×D

Garant GARANT Master Tap Alu through hole machine tap

High-performance tap, specially developed for **aluminium and non-ferrous alloys. Extra-long clamping slots** and neck length for usable **thread depth up to 4×D.**

- **HSS-E-PM tool material** for high cutting edge stability.
- Ultra-smooth **DLC coating** for wear resistance and avoidance of edge build-up.
- **Extra-long flute geometry.**
  13 1115 – With extra long shank.

Garant GARANT MASTER TAP ALU

Developed for the highest performance in non-ferrous metals.

- **Dynamic flute geometry**
  which has been perfectly adapted to non-ferrous metals.
- **Outstanding tool life**
  thanks to special DLC coating.
- **High wear resistance**
  thanks to high-quality HSS-E-PM tool material.
- **Developed for maximum thread depths**
  up to 4XD for through-hole tapped bores.

Garant MASTER TAP ALU

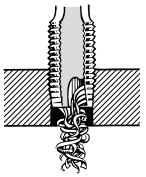
M | 60° | HSS E-PM | Standard | DIN 13 | ISO 2X 6HX | B 4 | h6 DIN 1835 B | ≤2.5×D

Garant Synchronised through hole machine taps

Sturdy design with spiral point and shank to DIN 1835-B. Special geometry for use on machines with **synchronised spindle drives.** Guidance is provided by the synchronising spindle of the machine.
With the latest generation of special **DLC coating sp²** for optimum tool life.
For use with **emulsion** (fat content minimum 8%).

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

13 1125



The spiral point evacuates the swarf in the cutting direction.

Through hole machine tap

With spiral point.

13 1150 – Size M2.3 and M2.6 to old DIN profile.

13 1200 – **All sizes:** Shank **to DIN 376(= shank Ø tapered),** thus suitable for greater operating depths Sizes M2; M2.5; M3 **without square.**

13 1250 – (Form C) 2–3 turns chamfer lead – **without spiral point.** Can also be used for blind holes.

With TiN coating for:

- Improved wear properties.
- Lower tendency to edge build-up.
- Higher cutting speeds possible.

For use with **emulsion** (fat content minimum 8%).

13 1265 – **HOLEX Clever Tap:**
Sturdy tap for conventional standard applications. High-quality HSS-E tool material and geometry for steels. Surface: Bronze-coloured tempered thread profile.

13 1760 – **With extra long shank.**
≤ M10: Shank **to DIN 371;**
≥ M12: Shank **to DIN 376.**

Advantage:

13 1760 – Designed **for tapping threads where access is difficult.**

Garant

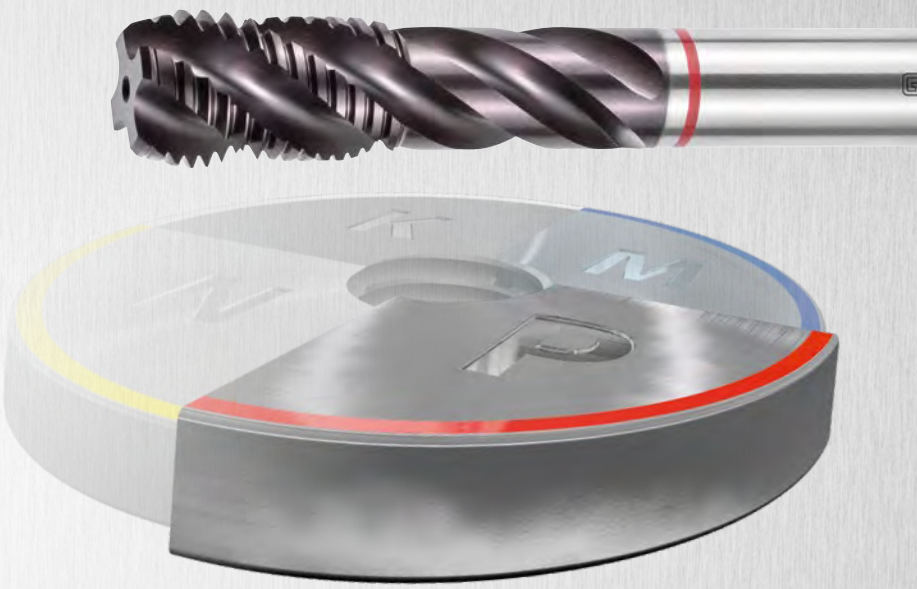
THE PROBLEM SOLVER – DEVELOPED FOR HIGH-STRENGTH STEELS.

The GARANT Master Tap STEEL^{HT}: Developed for difficult-to-machine steels and materials with high tensile strength.

Garant MASTER TAP STEEL^{HT}

- Maximum performance.
- Outstanding for high-strength steels.
- Reliable.



Find out more:
The GARANT Master Tap range for reliable, economical production
https://hog.tools/GARANT-Master-Tap

M | 60° | HSS E-PM | DIN 13 | B 4 | h9 | ≤3×D

DIN 371 ≤ M10 | DIN 376 ≥ M12

Garant GARANT Master Tap Steel^{HT} through hole machine tap

High-performance tap, specially developed for use in **steels with high tensile strength** and for **difficult-to-machine materials. Strong spiral point,** for process stability at high cutting forces.

- **HSS-E-PM tool material** – for **very high cutting edge stability.**
- **Optimised honed cutting edges.**
- **TiCN coating –** for **maximum wear protection.**

13 1946 – **Tolerance class: ISO 3X/6GX.**

Application:

13 1946 – For components which are galvanised or shrink slightly when hardened.

Recommendation: For **TOOLOX and HARDOX materials we recommend deviating from the DIN data** (see table) by **selecting a larger tapping hole ∅.**

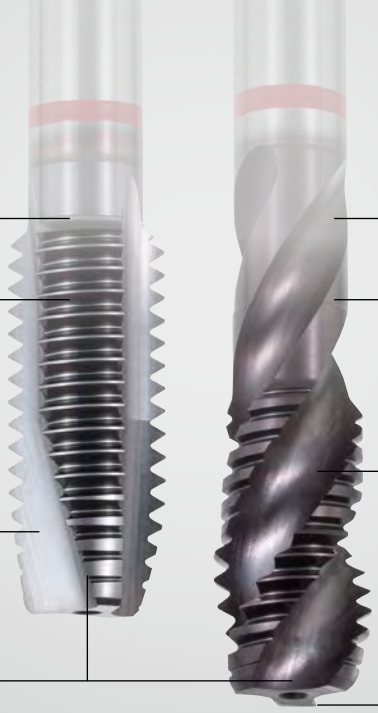
Garant GARANT MASTER TAP STEEL^{HT} – THE PROBLEM-SOLVER FOR HIGH-STRENGTH STEELS

Discover the outstanding characteristics of the GARANT Master Tap Steel^{HT}



Through hole

TiCN coating.
Very smooth coating surface. Reduction of cutting resistance in the push direction.

Special spiral point.
High stability.

HSS-E-PM substrate.
High cutting edge stability and wear resistance.

Blind hole

TiAlN coating.
High heat resistance.
Low frictional resistance.

Optimised guide thread.
High process reliability due to avoidance of chip jamming.

Without interference contours.
Threads can be tapped almost to the bottom of the hole.

M | 60° | HSS E-PM | DIN 13 | ISO 2X 6HX | C ⟷3⟷ | h9 | ≤1.5×D | ≤1.5×D

DIN 371 ≤ M10 | DIN 376 ≥ M12

Garant Through and blind hole machine taps

Sturdy version.

Recommendation: For **very hard steels, TOOLOX** and **HARDOX materials** we recommend **deviating from the DIN data** (see table) by drilling the tapping hole ∅ **0.05** to **0.3 mm** larger. For use only with a length compensation chuck – even on machines with synchronised spindle drives.

Garant Synchronised through hole machine taps

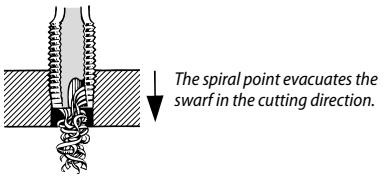
Sturdy design with spiral point and shank to DIN 1835-B. Special geometry for use on machines with **synchronised spindle drives.** The tap is controlled by the synchronising spindle of the machine.

Special **TiAlN coating** for optimum tool life. For use with **emulsion** (fat content minimum 8%).

Recommendation: For **TOOLOX materials** we recommend **deviating from the DIN data** (see table) by drilling the tapping hole ∅ **0.05** to **0.3 mm** larger.

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

13 2065



The spiral point evacuates the swarf in the cutting direction.

Garant

Through hole and blind hole machine tap for cast iron

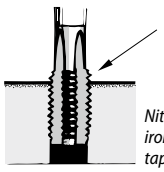
With straight flutes and short chamfer lead (2 – 3 turns).

Advantage:

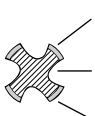
13 2550 –
- **Improved wear properties** due to hard coating.
- **Higher cutting speeds** due to reduction of thermal load on cutting edges.
- **Dry machining possible** on cast iron – cooling lubricant not necessary.

13 2500

13 2550



Nitrided surface – the abrasive cast iron material would heavily abrade taps which were not nitrided.



4 cutting edges (from size M5).

4 flutes (from size M5).

Particularly wear resistant due to nitrided surface (13 2500).

Garant Synchronised through hole machine taps

Sturdy version with lead-in taper and **shank to DIN 1835-B.**
Special geometry for **general-purpose use** on machines with **synchronised spindle drive.**
The tap is controlled by the synchronising spindle of the machine.
Special TiAlN coating for optimum tool life.
Can be used with **emulsion** (fat content minimum 8%).

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

HOLEX

THE CLEVER DUO

Clever Drill
No. 11 4031

Clever Tap
No. 13 5255

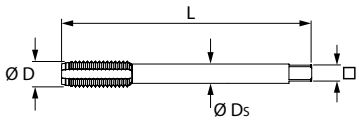
Outstanding quality:

- At an excellent price-performance ratio.
- With a broad product range for most standard applications.
- Practical geometry and clever design.

Even better – together in the convenient case.

For the blind hole application No. 14 6924.
For the through hole application No. 14 6724.

MF | 60° | DIN 374 | DIN 13 | ISO 2 6H | h9 | ≤3×D



Through hole machine tap

With spiral point.

13 2835 – (Form CS) 2 – 3 – start chamfer lead – with spiral point.
TiN coated.
Can be used with **soluble coolant** (fat content min. 8 %).

13 2845 – **HOLEX Clever Tap:**
Sturdy tap for conventional standard applications.
High-quality HSS-E tool material and geometry for steels.
Surface: Bronze-coloured tempered thread profile.

Garant

GARANT Master Tap Steel^{HT} through hole machine tap

High-performance tap, specially developed for use in **steels with high tensile strength** and for **difficult-to-machine materials. Strong spiral point,** for process stability at high cutting forces.

- **HSS-E-PM tool material** – for **very high cutting edge stability.**
- **Optimised honed cutting edges.**
- **TiCN coating –** for **maximum wear protection.**

Recommendation: For **TOOLOX and HARDOX materials we recommenddeviating from the DIN data** (see table) **by selecting a larger tapping hole** ∅.

Garant Synchronised through hole machine taps

Sturdy design with spiral point and shank to DIN 1835-B.
Special geometry for use on machines with **synchronised spindle drives.**
The tap is controlled by the synchronising spindle of the machine.
Special **TiAlN-S coating** for optimum tool life.
For use with **emulsion** (fat content minimum 8%).

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures maximum process reliability.

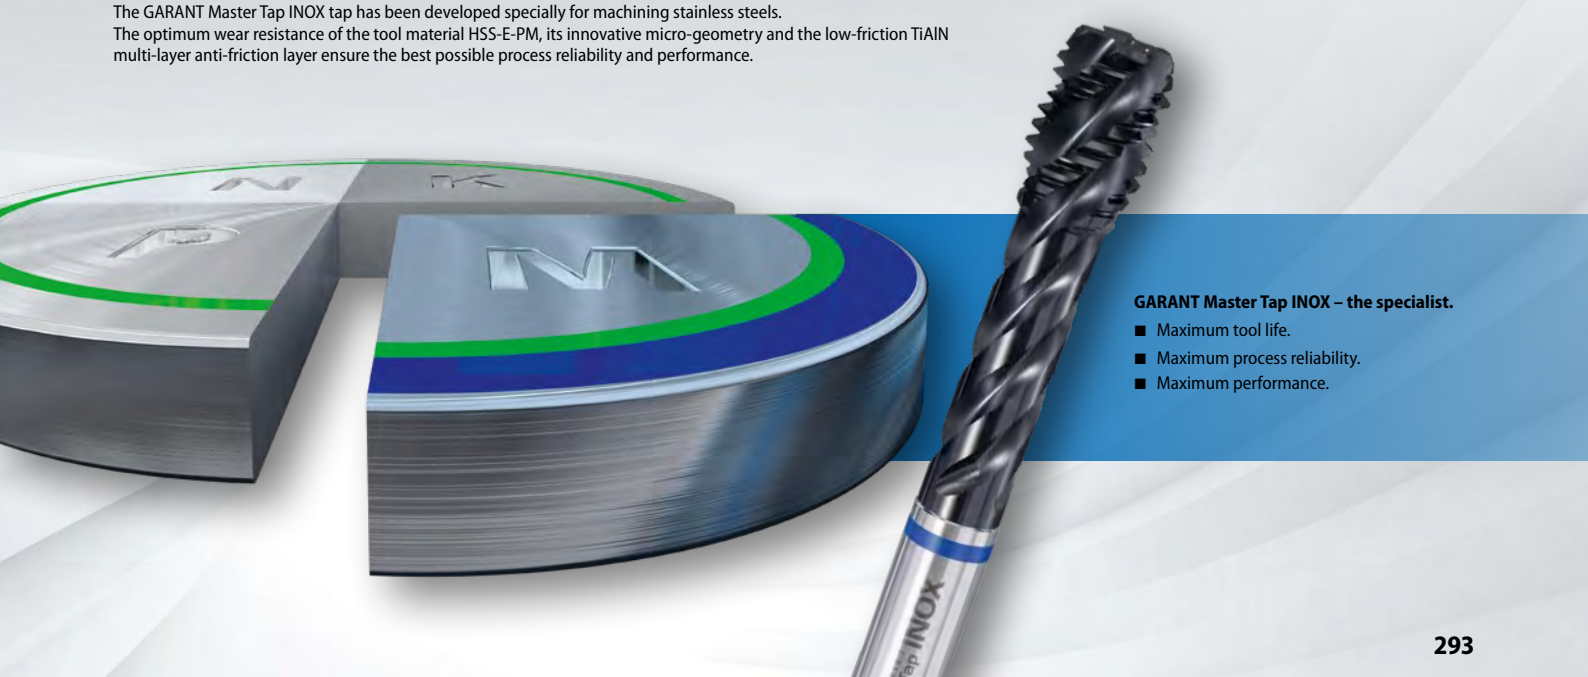
Garant GARANT Master Tap INOX

Absolute process reliability in particularly challenging VA stainless steel grades

Garant MASTER TAP INOX

The GARANT Master Tap INOX tap has been developed specially for machining stainless steels.
The optimum wear resistance of the tool material HSS-E-PM, its innovative micro-geometry and the low-friction TiAlN multi-layer anti-friction layer ensure the best possible process reliability and performance.



GARANT Master Tap INOX – the specialist.
- Maximum tool life.
- Maximum process reliability.
- Maximum performance.

Through hole machine tap

13 3332 – **HOLEX Pro Tap general-purpose tap.** Sturdy design suitable for a wide spectrum of materials. **Improved HSS-E tool material** with **low-friction TiN coating.**

13 3333 – With extra-long shank

13 3330/3333 – **GARANT Master Tap Universal taps,** designed for use in a wide spectrum of materials with high process reliability.

- HSS-E-PM tool material for maximum wear resistance.
- Reduced coefficient of friction due to the new high-performance coating.
- Special geometry for optimum swarf evacuation.

Advantage:

13 3333 – Designed for tapping threads where access is difficult.

Application: **For Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

Through hole machine tap

13 3360 – **GARANT Master Tap universal taps**, designed for use in a wide spectrum of materials with high process reliability.
- HSS-E-PM tool material for maximum wear resistance.
- Reduced coefficient of friction due to the new high-performance coating.
- Special geometry for optimum swarf evacuation.

13 3375 – **HOLEX Pro Tap general-purpose tap.** Sturdy design suitable for a wide spectrum of materials. **Improved HSS-E tool material** with **low-friction TiN coating.**

Application: **For UNC uniform coarse threads** ASME – B1.1.

Garant

GARANT MASTER TAP – THE MULTI-TALENTED ONE FOR GENERAL-PURPOSE USE.

- **Special flute geometry** ensures optimum chip evacuation.
- **Innovative AlTiX coating** for significantly reduced cutting forces.
- **Very high process reliability** in a wide range of materials.
- **For use across a wide spectrum of materials,** thus reducing the variety of tools that have to be stocked.

146435 146735

GARANT Master Tap

available as a set (M3; M4; M5; M6; M8; M10; M12) in a handy plastic case.
For through hole: No. 146435 M3-12,
for blind hole No. 146735 M3-12.

Garant Synchronous tap

Process reliability in thread production

Tapping often takes place at the end of a production process.
This operation is thus critical for the quality of the workpiece.
Defective threads generally give rise to significant additional costs.
Process reliability thus takes absolute priority. However **short cycle times** and **economic production processes** must also be considered.

Special features of a synchronous tap:
Due to the short guide part of the synchronous machine tap the frictional resistance between tool and workpiece is reduced.
This significantly increases the **process reliability** for thread tapping.

The axial guidance is therefore provided by the machine.
This assumes rigid clamping of the tool or **the use of our GARANT** quick-change tapping chuck **No. 33 8100 – 33 8121 with minimum length compensation (MLA)** .

Caution:
Because the tool is rigidly clamped using a Weldon arbor, shrink-fit chuck or collet chuck, the **spindle speed** must be synchronised with the **advance of the axis.**

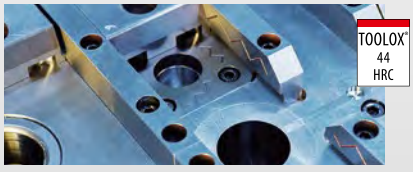
Garant GARANT MASTER TAP STEEL^{HT} – THE PROBLEM-SOLVER – DEVELOPED FOR STEELS THAT ARE DIFFICULT TO MACHINE

1.2379 (X 153 CrMoV 12)

High-alloy cold-working steel with high toughness and wear resistance.
Application:
Cutting punches, pressure plates and cutter inserts, general mould making.

1.7225 (42CrMo4+QT)

Alloyed heat treatable steel with high strength.
Application:
General mechanical engineering, automotive industry, steering knuckles, connecting rods and gear wheels.



Toolox44

Pre-hardened machinery steel and tool steel.
Application:
Extrusion moulds and machine building components, injection mould making.

HARDOX400

Abrasion-resistant steel with a nominal hardness of 400 HBW.
Application:
Conveyor systems, excavators, gear wheels and chain wheels.

M | 60° | HSS E-PM | Standard | DIN 13 | ISO 2X 6HX | 40° | h6 DIN 1835 B | ≤2.5×D

Garant Synchronised blind hole machine tap with internal coolant supply

Sturdy version with right-hand helix and shank to DIN 1835-B. Special geometry for use on machines with **synchronised spindle drives.** The tap is guided by the synchronised spindle on the machine. Special **TiAlN-S coating** for optimum tool life. For use with **emulsion** (fat content minimum 8%).

13 5415 – **Form E** (lead chamfer: 1.5 - 2 turns) for the deepest possible thread depths.

13 5420 – With **internal coolant supply** for maximum tool life.

Recommendation: For **TOOLOX materials** we recommend **deviating from the DIN** data (see table) by drilling the tapping hole ∅ **0.05 to 0.3mm** larger.

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

Synchro insert with ER collet base body

Advantages:

- Better thread quality.
- Less risk of tool breakage.
- Increased process reliability thanks to reduced axial forces and reduced load on the thread flanks.
- Increases the life of the tap.
- Modular design ensures flexibility in use.
- Easy handling thanks to the quick-change adapter.
- Perfect price/performance ratio yields optimum performance at low procurement costs.

Garant

GARANT Master Tap INOX blind hole machine tap for stainless and acid-resistant steels

High-performance tap, specially developed for **good process reliability in stainless and acid-resistant steels** and **duplex materials.**
The 45° helix angle of the flutes facilitates chip formation especially in ductile austenitic CrNi steels.

- **HSS-E-PM tool material** for a high degree of wear resistance
- The latest generation of **TiALN multi-layer coating**
- **Parameterised flute geometry** for optimum chip formation and **torsional rigidity**

13 5734 – With internal coolant supply
13 5736 – Form E (lead chamfer: 1.5 - 2 turns).
13 5737 – **Tolerance class ISO 3X/6GX.** For components which are **galvanised** or shrink slightly when hardened.
13 5739 – **With extra long shank.**

13 5739 Size M3–M10 – Shank to DIN 371.
13 5739 Size M12–M24 – Shank to DIN 376.

Advantage:
13 5739 – Designed for tapping threads where access is difficult.

Garant Synchronised blind hole machine tap with internal coolant supply

Sturdy version with right-hand helix and shank to DIN 1835-B. Special geometry for use on machines with **synchronised spindle drives.** The tap is controlled by the synchronising spindle of the machine.
Special **TiAlN coating** for optimum tool life. For use with **emulsion** (fat content minimum 8%).

13 5743 – **Form E** (lead chamfer: 1.5 - 2 turns) for the deepest possible thread depths.
13 5746 – With **internal coolant supply** for maximum tool life.

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

Garant GARANT Master Tap blind hole machine tap

Universal taps, designed for use in a wide spectrum of materials with high process reliability.
- HSS-E-PM tool material for a high degree of wear resistance.
- Reduced coefficient of friction due to the new high-performance coating.
- Special geometry for optimum swarf evacuation.

13 6158 – **Tolerance class: ISO 3X/6GX**
13 6162 – **Tolerance class: 7GX**
13 6164 – **Tolerance class: ISO 2/6H+0.1**

Application: For components which are galvanised or shrink slightly when hardened.
Recommendation: We recommend increasing the size of the tapping hole Ø by the tolerance allowance.

Regrinding service

GOOD FOR YOU AND GOOD FOR THE ENVIRONMENT.

With our regrinding service, you save money and resources.

Further information on the regrinding service:
Discover all about our services online now.
https://hog.tools/regrinding

Good for you

It is already worth it from the first regrind.
Overall, you can expect amazing savings of up to 85%. Without compromising on quality.

Good for the environment

Reusing the tool saves valuable resources and avoids unnecessary waste.
A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service. **An all-round worry-free package has never been so easy – and with maximum cost transparency.**

Blind hole machine tap for stainless and acid-resistant steels

13 7050

HSS E | ISO 2 6H | 40° | ≤2×D

13 7050 – Surface vaporised for reduced edge build-up.

13 7053 – **GARANT Master Tap INOX:**
High-performance tap, specially developed for **good process reliability in stainless and acid-resistant steels** and **duplex materials.**
The 45° helix angle of the flutes facilitates chip formation especially in ductile austenitic CrNi steels.

- **HSS-E-PM tool material** for a high degree of wear resistance
- The latest generation of **TiALN multi-layer coating**
- **Parameterised flute geometry** for optimum chip formation and **torsional rigidity**

Blind hole machine tap

13 7161 – **Tolerance class: ISO 3X/6GX**.
For components which are **galvanised** or shrink slightly when hardened.

13 7162 – With extra long shank.

13 7170 – **HOLEX Pro Tap general-purpose tap.**
Sturdy design suitable for a wide spectrum of materials. **Improved HSS-E tool material** with **low-friction TiN coating.**

13 7160–7162 – **GARANT Master Tap Universal taps,**
designed for use in a wide spectrum of materials with high process reliability.

- HSS-E-PM tool material for maximum wear resistance.
- Reduced coefficient of friction due to the new high-performance coating.
- Special geometry for optimum swarf evacuation.

Advantage:

13 7162 – Designed for tapping threads where access is difficult.

Garant Synchronised blind hole machine tap with internal coolant supply

Sturdy version with right-hand helix and shank to DIN 1835-B. Special geometry for **general-purpose use** on machines with **synchronised spindle drive.** The tap is controlled by the synchronising spindle of the machine. Special **TiAlN-S coating** for optimum tool life. For use with **emulsion** (fat content minimum 8%).

13 7183 – **Form E** (lead chamfer: 1.5 - 2 turns) for the deepest possible thread depths.

13 7186 – With **internal coolant supply** for maximum tool life.

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

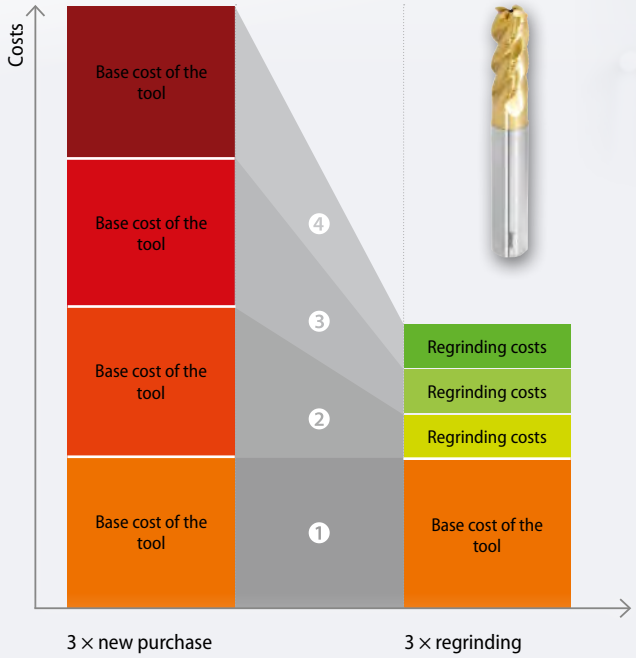
Hoffmann Group

Regrinding service

KEEP AN EYE ON THE COSTS.

With our regrinding service, you save money and resources.



Good for you

It is already worth it from the first regrind.
All with the original regrind quality, to the original geometry and on the original production machines.
There are no compromises here.

Up to **85 %** potential savings … | … with **95 %** tool life | … and **100 %** machining performance

Full power with maximum cost control – **test our regrinding service today!**

Garant GARANT Master Tap INOX

Developed for very high performance in stainless steel.

Discover the outstanding characteristics of the GARANT Master Tap INOX.

- **TOP chip formation**
  due to optimised cutting edges.
- **TOP chip evacuation**
  due to the special flute geometry.
- **TOP wear resistance**
  due to high-quality HSS-E-PM tool material.
- **TOP efficiency**
  due to the special micro-geometry.
- **TOP tool life**
  due to the most modern TiAlN multilayer coating.

G | 55° | DIN 5156 | h9

Garant Blind hole machine tap for stainless and acid-resistant steels

13 7450 – Surface vaporised for reduced edge build-up.
13 7752 – **Form E** (1.5-2 turns lead chamfer).
13 7750/7752 – **GARANT Master Tap INOX:**
High-performance tap, specially developed for **good process reliability in stainless and acid-resistant steels** and **duplex materials.**
The 45° helix angle of the chip flutes facilitates chip formation especially in ductile austenitic CrNi steels.

- **HSS-E-PM tool material** for maximum wear resistance
- The latest generation of **TiALN multi-layer coating**
- **Parameterised flute geometry** for optimum chip formation and **torsional rigidity**

Application: **For Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

Garant

GARANT Vap Tap blind hole machine tap

GARANT Vap Tap general-purpose tap.
Can be used **reliably** in a **wide range of materials**.
Optimised **neck and flute length** for **improved chip evacuation** when working on **deep** threads.
High-performance **HSS-E tool material** with higher **vanadium content** for improved **wear resistance**.
Surface vaporised for reduced edge build-up.

13 7765 – **Tolerance class ISO 228 + 0.05 mm.**

Application: **For Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

13 7765 – For components which are **galvanised**, or shrink slightly when hardened.

Recommendation:

13 7765 – We recommend **deviating from the DIN data** (see table) by drilling the tapping hole ∅ **0.05mm larger**.

Garant

GARANT VAP TAP – THE RELIABLE SOLUTION FOR A WIDE RANGE OF MATERIALS.

- **Optimised neck and flute lengths** for improved chip evacuation when working on deep threads.
- **High-performance HSS-E tool material with higher vanadium content** for improved wear resistance.
- **A reliable process** in a wide range of materials.
- **For use across a wide spectrum of materials,** thus reducing the variety of tools that have to be stocked.

146437 146737

GARANT Vap Tap

available as a set (M3; M4; M5; M6; M8; M10; M12) in a handy plastic case.
For through hole No. 14 6437 M3-12,
for blind hole No. 14 6737 M3-12.

Blind hole machine tap

13 7806 – **HOLEX Pro Tap general-purpose tap.** Sturdy design suitable for a wide spectrum of materials. **Improved HSS-E tool material** with **low-friction TiN coating.**

13 7807 – With extra long shank.

13 7808 – **Form E** (1.5 - 2 turns lead chamfer).

13 7805/7808/7807 – **GARANT Master Tap Universal taps**, designed for use in a wide spectrum of materials with high process reliability.

- HSS-E-PM tool material for maximum wear resistance.
- Reduced coefficient of friction due to the new high-performance coating.
- Special geometry for optimum swarf evacuation.

Advantage:

13 7807 – Designed for tapping threads where access is difficult.

Application: **For Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

Synchronised blind hole machine tap with internal coolant supply

Sturdy version with right-hand helix and shank to DIN 1835-B.
Special geometry for **general-purpose use** on machines with **synchronised spindle drive.**
The tap is controlled by the synchronising spindle of the machine.
Special **TiAlN-S coating** for optimum tool life.
For use with **emulsion** (fat content minimum 8%).

13 7813 – **Form E** (lead chamfer: 1.5 - 2 turns) for the deepest possible thread depths.
13 7816 – With **internal coolant supply** for maximum tool life.

Application: **For Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

Note: **For use on synchronised spindles,** the **GARANT** quick-change tapping chuck **No. 338100 – 338121 with minimum length adjustment (MLA)** ensures very high process reliability.

Blind hole machine tap

13 8000 – **Sturdy design, with 20° right-hand chip flutes.**
13 8004 – **HOLEX Clever Tap:**
Sturdy tap for conventional standard applications.
High-quality HSS-E tool material and geometry for steels.
Surface: Bronze-coloured tempered thread profile.

Application: **For UNF uniform fine threads** ASME – B1.1.

Garant GARANT Master Tap INOX blind hole machine tap for stainless and acid-resistant steels

High-performance tap, specially developed for **good process reliability in stainless and acid-resistant steels** and **duplex materials.**
The 45° helix angle of the flutes facilitates chip formation especially in ductile austenitic CrNi steels.

- **HSS-E-PM tool material** for maximum wear resistance
- The latest generation of **TiALN multi-layer coating**
- **Parameterised flute geometry** for optimum chip formation and **rigidity**

Application: **For UNF uniform fine threads** ASME – B1.1.

NPT | 60° | ANSI B1.20.1 | C 3 | 1:16 | h9

Machine tap for tapered NPT pipe threads

13 8095 – **HOLEX Clever Tap:**
Sturdy tap for conventional standard applications. High-quality HSS-E tool material and geometry for steels. Surface: Bronze-coloured tempered thread profile.

13 8100 – **For the highest performance demands.** For use with **emulsion** (fat content minimum 8%).

13 8110 – A **special TiAlN coating** for long tool life. Due to **interrupted** guide thread: **reduced tapping torque** and **improved distribution of lubricant.** For use with **emulsion** (fat content minimum 8%).

Application: **Tapered** pipe threads **(NPT)** to **ANSI B1.20.1,** for threads with sealants. See the table for the specified minimum size of the tapping hole.

Recommendation: **Tapping hole Ø A:**
Pre-drill a plain hole **without using a reamer.**
Tapping hole Ø B:
Pre-drill a plain hole and then **ream it using a 1:16 taper reamer (see No. 162650).** The taper bore Ø can then be checked laterally by reference to the D_{max} check dimension (see table). **Variant B** for drilling the tapping hole offers the best process reliability for the tapping operation.

Rc | 55° | HSS E | DIN 2181 | DIN EN 10226-2 | C 3 | 1:16 | h9

Garant Machine tap for tapered Whitworth pipe thread

The **short shank overhangs less and hence is more stable.**

Application: For use as machine tap or for cleaning existing threads by hand. **Tapered** Whitworth pipe thread (**BSPT**) to **ISO 7/1** and **BS21,** for joints with sealant in the thread. See the table for the specified minimum size of the tapping hole.

13 8120

Recommendation: **Tapping hole Ø A:**
Pre-drill a plain hole **without using a reamer. Variant A** can be used if there is no risk of sealing problems.
Tapping hole Ø B:
Pre-drill a plain hole and then **ream it using a 1:16 taper reamer (see No. 162650).** The taper bore Ø can then be checked laterally by reference to the D_{max} check dimension (see table). **Variant B** for drilling the tapping hole offers the best process reliability for the tapping operation and at the same time ensures the most reliable seal in the thread.

GARANT Master Tap Alu blind hole machine tap for wire inserts

High-performance tap, specially developed for **aluminium and non-ferrous alloys**.
Dynamic helical pitch of the flutes ensures **optimum chip evacuation and process reliability.**

- **HSS-E-PM tool material** – for high cutting edge stability.
- Ultra-smooth **DLC coating** for wear resistance and avoidance of edge build-up.
- **Dynamic helical pitch of the flutes.**
- **Short lead chamfer form E.**

Application: For production of EG mounting thread according to metric ISO thread **DIN 8140** for **STI wire thread inserts** (Screw Thread Insert).

Note: Please be sure to observe the correct **tapping hole Ø (see table)!**
Size EG-M2 – Suitable up to thread depth 2.5 × D.

Garant

GARANT Master Form Steel fluteless machine tap with oil grooves

The latest generation of **high-performance fluteless taps**, specially developed for **use in steel materials.**

- Optimised polygon geometry for a **lower torque.**
- Multi-layer HIPIMS coating for **high wear resistance.**
- HSS-E-PM substrate for **exceptional process reliability.**

13 9198 – **Form E** (lead-in 1.5 – 2 turns) **for deep threads with short run-out.**
The thread is tapped almost to the bottom of the hole.

13 9202 – **With internal coolant feed laterally from the grooves.**
Permits the longest possible tool life when machining through holes and blind holes.

13 9205 – **Tolerance class: ISO 3X/6GX.**

13 9207 – **Tolerance class: 7GX.**

13 9194–9202/9208 – **Tolerance class: ISO 2X/6HX.**

13 9208 – With extra long shank.

13 9194–9207 – **DIN 2174 (≈ DIN 371** ≤ M10; ≈ **DIN 376** ≥ M12**).**

Advantage:

13 9208 – Ideal for thread forming where access is difficult.

Application:

13 9205/9207 – For components which are **galvanised**, or shrink slightly when hardened.

Fluteless machine tap with oil grooves

DIN 2189 (≈ DIN 5156). **With oil grooves; optimum lubrication effect even in deeper threads.**

13 9395 – Special **TiAlN coating**, highly suitable **for aluminium alloys.**

13 9425 – **With internal coolant feed** laterally from the grooves.
Permits the longest possible tool life when machining through holes and blind holes.

13 9475 – **HOLEX Pro Form:**
High-performance fluteless tap for use in a **wide range of materials.**
- HSS-E-PM tool material for **high wear resistance.**
- The latest-generation **optimised HiPIMS TiN coating**.

13 9395/9400 – The **innovative polygon form** permits a wide application spectrum.
The **multi-function layer structure** achieves **maximum service life** even in **high-tensile materials.**

13 9415/9425 – **GARANT Master Form Steel:**
The latest generation of high-performance fluteless taps, specially developed for **use in steels.**
- Optimised polygon geometry for a **lower torque.**
- Multi-layer HIPIMS coating for **high wear resistance.**
- HSS-E-PM substrate for **top process reliability.**

Application: For **Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connection).

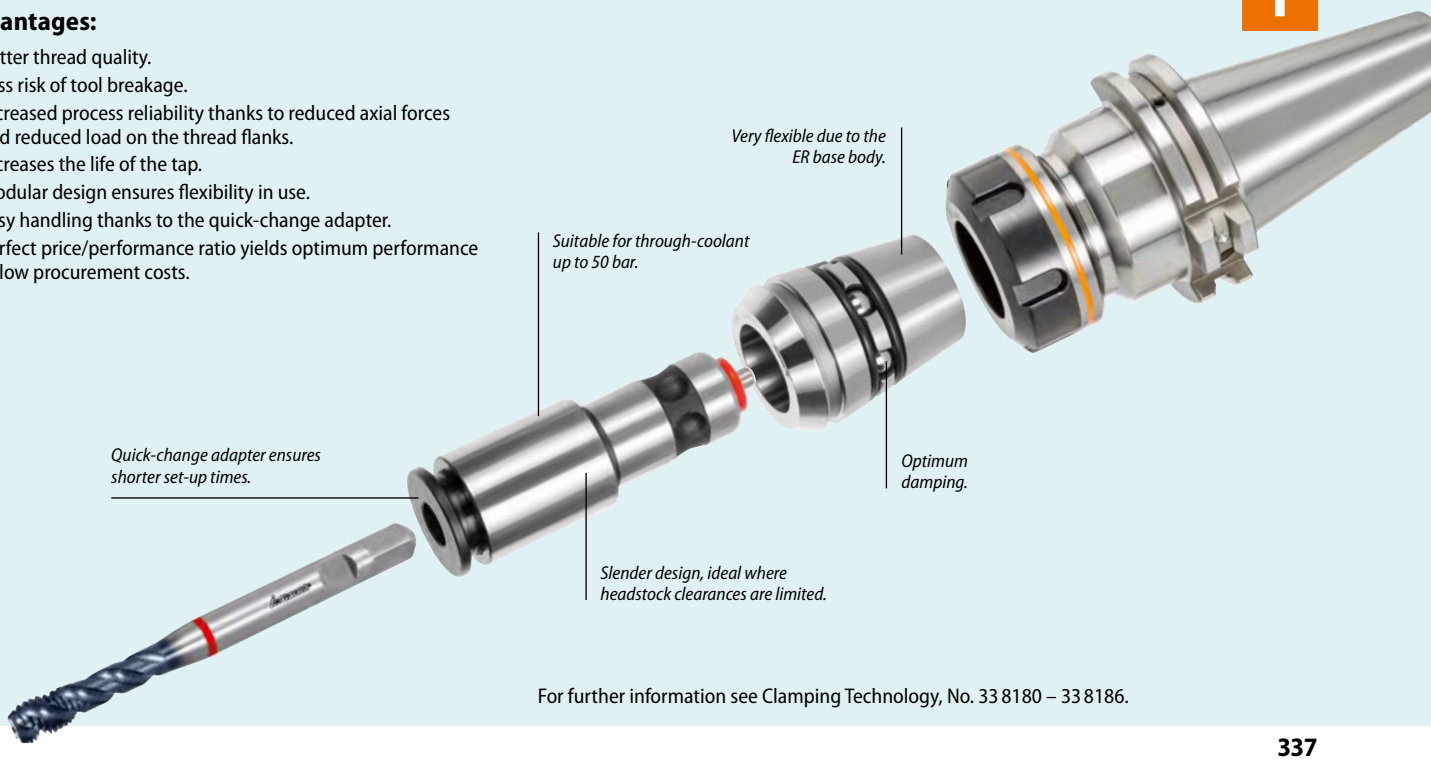
13

Synchro insert with ER collet base body

Advantages:

- Better thread quality.
- Less risk of tool breakage.
- Increased process reliability thanks to reduced axial forces and reduced load on the thread flanks.
- Increases the life of the tap.
- Modular design ensures flexibility in use.
- Easy handling thanks to the quick-change adapter.
- Perfect price/performance ratio yields optimum performance at low procurement costs.



For further information see Clamping Technology, No. 33 8180 – 33 8186.

UNC | 60° | HSS E-PM | DIN 2174 | 2BX | E | h9 | ≤3×D | ≤3×D

Garant GARANT Master Form Steel fluteless machine tap with oil grooves

DIN 2174 (≈ DIN 371 ≤ 3/8; ≈ **DIN 376** ≥ 7/16**).**
The latest generation of **high-performance fluteless taps**, specially developed for **use in steel materials.**
- Optimised polygon geometry for a **lower torque.**
- Multi-layer HIPIMS coating for **high wear resistance.**

HSS-E-PM substrate for **exceptional process reliability.**
Form E (lead-in 1.5 – 2 turns). For deep threads with short lead-in. The thread is tapped almost to the bottom of the hole.
Application: **For UNC unified coarse threads ASME–B1.1.**

M | M-LH | 60° | Solid carbide | DIN 13 | h6 DIN 6535 HA | 2 | 90° | Full profile

Garant Micro-grain solid carbide drill thread milling cutter with countersink

≤1.5×D ≤1.5×D

13 9511

Corrected thread profile for milling **exact internal threads** (ensure stable clamping conditions).
Incorporating a countersink profile for a 90° countersink. A stronger core diameter, two narrow geometrically optimised chip flutes and a special drill point result in good chip formation and low cutting pressure.

Size M4–M12 – **Internal coolant feed.**

Advantage: **Drilling, countersinking and thread milling all with a single tool!**

Note: HB and HE shanks are available at the same price as HA.
13 9511 – **HB** shank: order with No. **139511**+ **12900 HB**.
HE shank: order with No. **139511**+ **12900 HE**.
13 9516 – **HB** shank: order with No. **139516** + **12900 HB**.
HE shank: order with No. **139516** + **12900 HE**.

Garant GARANT Master TM end cutting thread mill

The special front cutter geometry **with unequal spacing** permits **process-reliable circular thread milling** across a **wide spectrum of materials.** The **side cooling grooves** on the shank ensure **outstanding coolant feed** without weakening the tool core and thus offer **maximum process reliability even in unstable conditions.** All tools have left-hand cutting and are suitable for **right-hand and left-hand threads.**

- **Significantly reduced vibrations** due to **irregular cutting edge spacing.**
- **New coating** for optimum **wear resistance.**
- **Cooling grooves** on the shank for targeted **coolant feed.**
- **Corrected thread profile** for avoidance of profile distortions.

13 9526

Note: HB and HE shanks are available at the same price as HA.
HB shank: order with No. **139526 + 129100 HB**.
HE shank: order with No. **139526 + 129100 HE**.

Size M6 – Can also be used for thread size MF7×1 and MF8×1.

Garant GARANT Master TM solid carbide single profile thread mill

Solid carbide thread milling cutters **with irregular cutting edge spacing and an increased number of cutting edges.** Due to the **irregular cutting edge spacing** they achieve very **smooth cutting action** and **long tool life**. **Newly developed universal geometry** and **high-performance coating** for use across a wide spectrum of materials.

- **Significantly reduced vibration** due to **irregular cutting edge spacing.**
- **Increased number of cutting edges.**
- **Latest-generation AlTiN-based HIPIMS coating.**
- **Corrected thread profile** for avoidance of profile distortions.

Size M1–M3,5 – **Parallel coolant channels.**

Size M4–M6 – **Axial cooling grooves on the shank.**

Advantage: Significantly **less radial pressure** than with multi-tooth thread mills. The tool can also be used for additional thread profiles (UN; UN-LH) **for various pitches and diameters**. See overview for possible threads.

Note: HB and HE shanks are available at the same price as HA.
HB shank: order with No. **139620 + 129100 HB**.
HE shank: order with No. **139620 + 129100 HE**.

UNIVERSAL AND POWERFUL.

GARANT Master TM thread mill.

Unequal spacing of the cutting edges, the HiPIMS coating technology and suitable for use in a wide range of materials: these are the hallmarks of the GARANT Master TM range.

Thanks to the **innovative geometry**, the GARANT Master TM products ensure **extremely smooth cutting** and **reduced cutting forces** in the thread milling process.
These decisive advantages lead to **extremely high performance combined with absolute process reliability**. Whether in stainless steel, cast materials or high-tensile steels – thanks to their general-purpose characteristics, the GARANT Master TM family is always the **right choice for your thread milling process**.

Garant MASTER TM

HOLEX Micro-grain solid carbide plain shank thread mill

Corrected thread profile for milling **exact internal threads** (ensure stable clamping conditions).
Size M8–M20 – **Internal coolant feed.**

Note:
HB and HE shanks are available at the same price as HA.
Order **HB** shank: with **No. 139651 + 129100 HB**.
Order **HE** shank: with **No. 139651 + 129100 HE**.

13 9651

GARANT Master TM solid carbide plain shank thread mill with countersink

Solid carbide thread milling cutters **with irregular cutting edge spacing and an increased number of cutting edges**. Due to the **irregular cutting edge spacing** they achieve very **smooth running** and **long tool life**.
Newly developed universal geometry and **high-performance coating** for use across a wide spectrum of materials.

- **Significantly reduced vibration** due to **irregular cutting edge spacing.**
- **Increased number of cutting edges.**
- **Latest-generation AlTiN-based HiPIMS coating.**
- **Corrected thread profile** for avoidance of profile distortions.

Advantage: Incorporating a countersink profile for a 90° countersink and thread milling in a single operation.

Note: HB and HE shanks are available at the same price as HA.
13 9663 – Order **HB** shank: with **No. 139663 + 129100 HB**.
Order **HE** shank: with **No. 139663 + 129100 HE**.
13 9664 – Order **HB** shank: with **No. 139664 + 129100 HB**.
Order **HE** shank: with **No. 139664 + 129100 HE**.
13 9666 – Order **HB** shank: with **No. 139666 + 129100 HB**.
Order **HE** shank: with **No. 139666 + 129100 HE**.

Garant GARANT MASTER TM THREAD MILLS IN PERFECTION

Thanks to their unequal spacing of cutting edges, the new GARANT Master TM solid carbide thread milling cutters set new standards for thread milling.

Green ring
- For general applications.

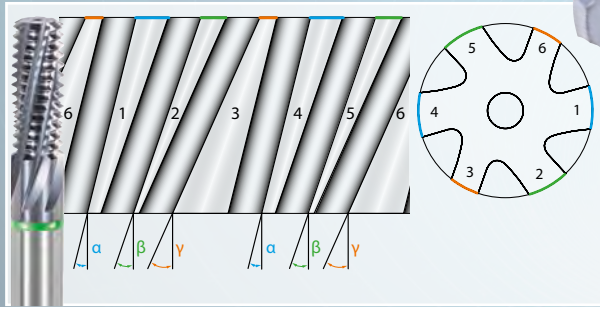
Innovative coating
- The latest coating technology for optimum protection against wear.
- High performance over a wide spectrum of materials.

Corrected thread profile
- Avoidance of profile distortion.
- Threads true to gauge and true to standard.

Unequal spacing
- Significant reduction in vibration.
- Very smooth cutting action.
- Reduction in the cutting forces avoids tool displacement.

Optimised solid carbide substrate
- Improved bending strength.
- High tool strength.

Increased number of cutting edges
- More efficiency due to increased contour feed rate.



Your advantages at a glance:
- Long tool life due to optimum cutting characteristics.
- Shorter machining times due to more cutting edges.
- Optimum protection against wear due to new high-performance coating.
- High surface quality of the thread.
- Precise threads due to profile correction.
- Reduction in the variety of tools required, thanks to good general-purpose capabilities.

Garant GARANT Master TM solid carbide plain shank thread mill with countersink

Solid carbide thread milling cutters **with irregular cutting edge spacing and an increased number of cutting edges**. Due to the **irregular cutting edge spacing** they achieve very **smooth running** and **long tool life**.
Newly developed universal geometry and **high-performance coating** for use across a wide spectrum of materials.

- **Significantly reduced vibration** due to **irregular cutting edge spacing.**
- **Increased number of cutting edges.**
- **The latest generation of AlTiN-based HiPIMS coating.**
- **Corrected thread profile** for avoidance of profile distortions.

Advantage: Incorporating a countersink profile for a 90° countersink and thread milling in a single operation.

Application: For **Whitworth parallel pipe threads** DIN-ISO 228/1 (threads that do not form a seal within the connections). **Suitable for internal and external threads.**

Note: HB and HE shanks are available at the same price as HA.
Order **HB** shank: with **No. 139716 + 129100 HB**.
Order **HE** shank: with **No. 139716 + 129100 HE**.

Garant Indexable thread mill

Application:

- For parallel **internal** and **external threads;** other inserts and taper thread tools available on request.
- For threads in **through holes** and **blind holes.**
- For universal use cutting **left-hand and right-hand threads.**
- No chip clearance problems, since only short chips are produced.
- Low cutting pressure.

Note:
Size 22/25–37/98 – Version with double HB drive flat.

TOOL **Scout**

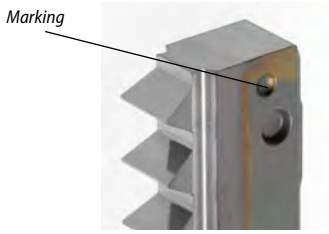
- Quick application-related tool selection
- Direct ordering in the eShop
- Tool selection not restricted to specific standards or manufacturers
- Cutting data - direct selection
- Tool information for reliable engineering

You can find optimum cutting data, machining strategy and NC programs for your machine programming in the ThreadScout.

Full profile

Garant

Milling inserts for HPC indexable thread mills No. 218050 / 218054



Sturdy milling inserts for **high feed rates** and **high productivity.**

Note: Always fit the thread milling inserts with the marks matching, otherwise the thread will be distorted! (Sides have either a mark or no mark).
Feed f_z = HB 7720 in steel < 750 N/mm² = 0.25 mm / tooth.
Feed f_z = HB 7735 in INOX > 900 N/mm² = 0.15 mm / tooth.

Garant Indexable thread milling head for deep holes

Application:

- For large and deep threads.
- For parallel internal threads; other inserts and carriers available on request.
- For threads in through holes and blind holes.
- For universal use on left-hand and right-hand threads.
- Low cutting pressure.

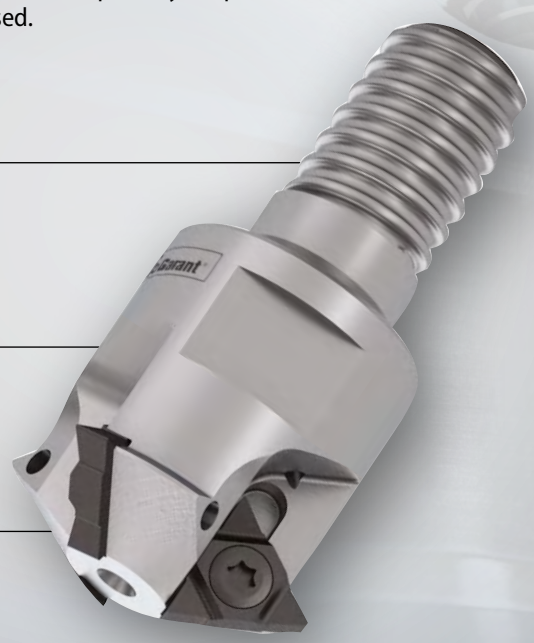
Garant MODULAR THREAD MACHINING

The GARANT thread milling range
Ideal for making large and deep threads.
The standard connection thread allows the thread mill to be optimally adapted to the machining depth and the performance to be increased.

Standard connection thread
for adaptive extension

Short overall length
to prevent displacement

Stable insert seating



Partial profile

Garant Toolholder with ratchet

With two-jaw chuck for clamping square shanks.
Moveable T-handle with a grooves centred and at each end for engaging the retaining ball.
Holder with stainless steel sheath.
Ratchet is reversible and can also be locked. **All-steel construction** for high torque applications.
Clamping jaws milled and hardened for high toughness and optimum surface hardness.

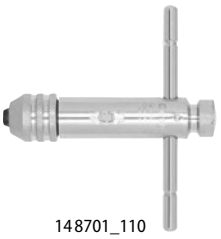
14 8701 Size 117 – **Heavy-duty version** for taps up to M20.
With head-side **hexagon** with 22 mm jaw width.

14 8706 – **Adaptor** with **1/4** inch hexagon shank to DIN 3126, in all-steel version, for holding small taps (M3 - M10).

Application:

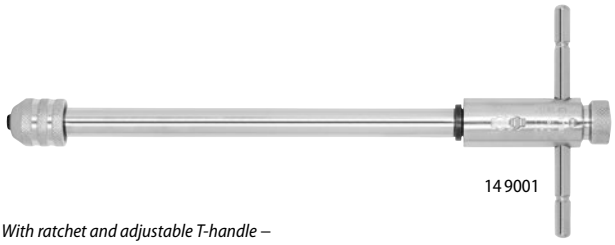
14 8701 – Suitable for tapping holes where access is difficult.
14 8706 – Ideal for repair and assembly work in mobile situations.
14 9001 – Suitable for tapping holes where access is difficult.

Note:	The square sizes of other tap and reamer sizes can be found in the tables in the respective Product Groups.

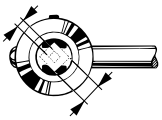


14 8701_110

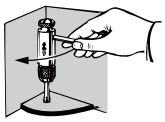
14 8701_117



14 9001



With 2 adjustable jaws.
The specified dimensions relate to the smallest and largest diameter.



With ratchet and adjustable T-handle – particularly useful for tapping holes where access is difficult.

Garant Adjustable micro tap wrench with round vial

Precision tap wrenches for exact axial guidance even with the smallest thread dimensions.

- Precisely eroded steel clamping jaws hardened.
- Lightweight design made of 3D printing plastic.
- Pre-centering of the tap using an integral retaining magnet.
- Easy clamping of taps by means of a bayonet lock.

Application: For exact perpendicular guidance, especially on small taps M1– M3. Can also be used for direct mounting in a die stock No. 149310 25×9.

Note: Removable round vial with magnetic fixing.

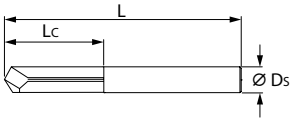
Garant Solid carbide tap drilling out tool

Solid carbide | Standard

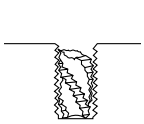
Strong plain shank with **hexagon** for mounting in a drill chuck and self-centring cutting edge.

Application: For **drilling out broken off taps.**
Stable clamping is necessary, the hole must be dry and without cutting oil.

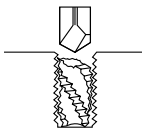
Note: v_c for material < 67 HRC 10 – 28 m/min.
Wear safety glasses.



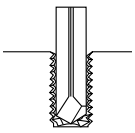
14 9830



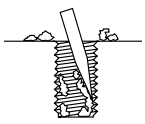
Grind oblique break-through points flat.



Approach the start several times in order to centre the boring-out tool.



Drill out with an even feed rate. Evacuate chips frequently.



Clean the bore and remove the residue.

Power saw blades for power hacksaws

17 1000/1150 – **GARANT –** saw blade made of molybdenum alloyed high performance cutting steel **HSS (DMo5).** Due to constantly high hardness and extreme toughness, particularly **high cutting performances** are obtained (reduced cutting times and longer tool life). The precise set ensures a straight cut.

17 1100/1250 – **BAHCO bi-metal –** a strip of HSS teeth welded to a flexible blade body of special steel using electron beam welding in a vacuum. In this way the saw blades are extremely hard at the tooth tips, but have **enormous flexibility** and are unbreakable even **at high feed rates.**

17 1550/1650 – **KOMET bi-metal –** tooth tips of HSS-M3 and blade body of spring steel. For high cutting performance and feed rates. Unbreakable for maximum safety at the workplace.

Note:

17 1150–1650 – **Especially for Kasto machines** (clamping holes offset from 38 mm blade width).
Important: The instructions included with the saw blades must be followed in all details.

17 1550/1650 – **KOMET** HSS saw blades: Other versions such as VP 7 (7° rake angle, Vario toothing) and P 13 (13° rake angle – especially for stainless steels) available on request on short delivery times.

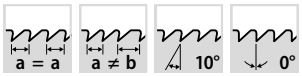
RÖNTGEN Band saw blades in coils



Regular tooth pitch –Constant pitch with **0° rake angle** in plastic dispenser, no welded joint.

17 2000 – **RRR-Plus** made of alloyed tool steel, 30 m each coil.

17 2050/2100 – **bi-alpha-cobalt: High-performance bi-metal band saw blade** with high chrome content **spring steel backing** and cobalt alloyed (M42) HSS tooth tips (67–69HRC). **Extreme tooth tip hardness, flexible backing**, each roll 15 m.

Application: Particularly suitable for smaller and medium size cross sections (up to maximum 70 mm contact length).

Note:
- **Regular pitch teeth 10°:** Sizes 6/4H, 6/6H, 10/4H, 10/6H, 13/4H, 13/6H, 16/4H.
- **Variable pitch teeth 0°:** Size 6/1014, 10/1014, 13/1014.

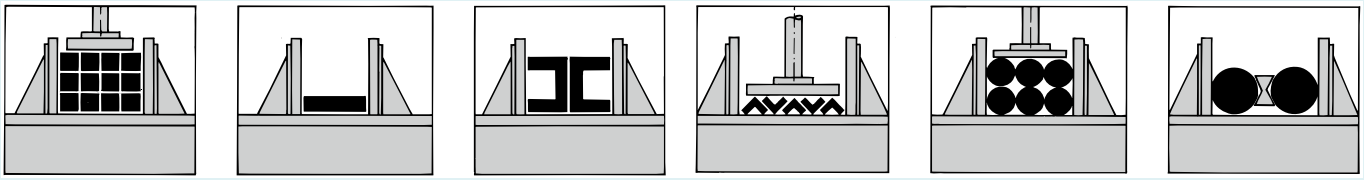
Band saw blades

Clamping of the material

Clamp the material so that the band saw blade cuts with as little vibration as possible. When cutting material bundles, tack weld the ends together if necessary.
This increases the cutting performance and the blade life.



Running in new blades

At normal feed rates the sharp teeth of a new blade dig very aggressively into the material.
Therefore reduce the feed rate by 50 % and the cutting speed by 70 % for the first cuts.
After the blade has cut an area of about 400 cm^2, slowly increase the feed rate to the optimum value.
The working life of a band-saw blade is to a large extent dependant on controlled running in!

Coolant

The coolant helps to prevent the saw tooth and workpiece from overheating and to take the chips away from the cutting point.
Coolant is normally applied when sawing all steels. Cast iron on the other hand is usually sawn dry.
Cutting oil gives good results when sawing case-hardening steels, higher alloyed tool steels, heat-treatable steels, stainless steels and titanium.
Micro-spray systems give good results when sawing pipes and profiles. In this connection, note the need for a good chip clearance brush.

Cutting speed and feed rate

The cutting speed (blade speed) depends on the tensile strength, type and cross-section of the material to be sawn.
The greater the tensile strength, the lower the cutting speed should be. Smaller cross-sections can be sawn at higher speeds than larger cross-sections.
Thin-walled pipes and profiles, and sharp edges, are sawn at low feed rates; the feed rate (pressure) should be kept as constant as possible.

Material	Cutting speed in m/min bi-alfa-cobalt (M42)
General purpose steels / machining steels	80 – 90
Case-hardening steels / heat-treatable steels	45 – 75
Unalloyed tool steels / roller bearing steels	40 – 60
Alloyed tool steels / high speed steels	30 – 40
Stainless steels	20 – 35
Heat resistant steels High-temperature alloys	15 – 25

If vibration occurs adjust the cutting speed (m/min) to marginally faster or slower.
As the blade becomes more blunt increase the feed rate somewhat.

Assessing a cracked weld on the blade

Straight rupturing of the weld after a short period of use indicates a manufacturing fault.
Breaking of the weld after longer term use, the crack propagating as a zigzag, is an overload fracture.

Tooth pitches

Tooth pitch recommendations for **solid material:**
Recommendation: also state the rake angle.

For material thickness	Variable pitch teeth	Rake angle
< 25 mm	10/14	0°
15 – 40 mm	8/12	0°
25 – 50 mm	6/10	0°
35 – 70 mm	5/8	0°
40 – 90 mm	5/6	10°
50 – 120 mm	4/6	0° / 10°
50 – 150 mm	4/5	10°
80 – 180 mm	3/4	0° / 10°
130 – 350 mm	2/3	10°
150 – 400 mm	1.5/2	10°
200 – 600 mm	1.1/1.6	10°
> 500 mm	0.75/1.25	10°

Variable pitch teeth 3/4 0° and 4/6 0° are suitable only for pipes, profiles and girders, **not** for solid material. Variable pitch teeth 10° and the band qualities Bi-Alfa Master No. 174050 are recommended for sawing solid material of high-alloy and long-chipping materials.

Tooth pitch recommendations for **pipes:**

Wall thickness S (mm)	Pipe outside∅ D (mm) Tooth pitch Z (tpi)									
	20	40	60	80	100	120	150	200	300	500
2	14	10/14	10/14	10/14	10/14	8/12	8/12	8/12	8/12	5/8
3	14	10/14	10/14	8/12	8/12	8/12	8/12	6/10	6/10	5/8
4	10/14	10/14	8/12	8/12	8/12	6/10	6/10	5/8	5/8	4/6
5	10/14	10/14	8/12	8/12	6/10	6/10	5/8	4/6	4/6	4/6
6	10/14	8/12	8/12	6/10	6/10	5/8	5/8	4/6	4/6	4/6
8	10/14	8/12	8/12	6/10	5/8	5/8	4/6	4/6	4/6	4/6
10		8/12	6/10	5/8	4/6	4/6	4/6	4/6	4/6	4/5
12		8/12	6/10	4/6	4/6	4/6	4/6	4/6	4/6	4/5
15		8/12	6/10	4/6	4/6	4/6	4/5	4/5	4/5	4/5
20			4/6	4/6	4/6	4/6	4/5	4/5	4/5	3/4
30				4/6	4/6	4/5	4/5	4/5	4/5	2/3
50							4/5	3/4	2/3	2/3
80								3/4	2/3	2/3
> 100									2/3	1.5/2

For thin-walled pipes (up to approx. 8 mm wall thickness) use preferably tooth pitches with 0° rake. **Rule of thumb: There should be at least 3 teeth in contact with the component.**

Blade width

The largest blade width permissible on the machine should be selected,
in order to achieve sufficient stability at higher feed rate forces.
When sawing curves, the blade width depends on the smallest radius to be cut (see table).

Radius (mm)	3	8	15	30	38	65	100	140
Blade width (mm)	3	5	6	8	10	13	16	20

HSS Co8

a = a | a ≠ b | 10° | 0°

Metal band saw blades welded in standard lengths

GARANT – high-performance bi-metal band saw blade with wear-resistant **M42 teeth** and special flexible backing with increased load capacity.
X-RAY – bi-alfa-cobalt: High-performance bi-metal band saw blade with **M42** high-speed alloy steel (HSS, 67-69 HRC) tooth tips and a high-alloy spring steel backing.
HOLEX – Production band saw blade with high cutting performance.

Application:
Variable pitch teeth 0° – very low vibration, for a large range of cross sections (for pipes and profiles, solid materials up to maximum 70 mm).
Variable pitch teeth 10° – general purpose for a wide range of cross-sections (for solid material from 50 mm).
Regular pitch teeth 0° – for small to medium cross-sections up to maximum 70 mm engagement length.
Regular pitch teeth 10° – for large cross-sections from 50 mm engagement.

Note: **Running in a new blade:** See GARANT machining handbook No. 110010 and information page.

HSS Co8 | a ≠ b

Metal band saw blades welded to length as ordered

Note:
Our application engineers will gladly offer you further technical advice.
Further information can be found in the **GARANT machining handbook No. 110020** or from **RÖNTGEN Cutting Solutions (RCS)** at https://www.roentgen-saw.com/RCS/.
Price each = price per running metre × band length incl. welded joint.
Information required when placing an order: Length × width × thickness (mm) tooth format.
Example: 10 pieces No. 174000, 4870×34×1.1 - 3/4H -10°.
Use 3/4 0° and 4/6 0° variable pitch teeth only for pipes and profiles!

Variable pitch teeth 0° / 10°

17 3905 – **High-performance bi-metal band saw blade** with wear-resistant **M42 teeth** and special flexible backing with increased load capacity.
17 4000 – **bi-alpha-cobalt: High-performance bi-metal band saw blade** with **M42** high-speed alloy steel (HSS, 67-69 HRC) tooth tips and a high-alloy spring steel backing.
17 4025 – **Production band-saw blade** for high cutting performance.

Description:
Variable pitch teeth, 0° – Very low vibration, for a large range of cross sections (for pipes and profiles, solid materials up to max. 70 mm).
Variable pitch teeth 10° – General purpose for a large range of cross sections (for solid materials from 50 mm).
3/4 – 10/14 teeth per inch: 0° variable pitch teeth
1.4/2H – 5/6H teeth per inch: 10° variable pitch teeth

Note:
17 3905 – **Successor product to No. 173900.**

Variable pitch teeth 6°

17 4040 – **High-performance bi-metal band saw blade** with sturdy **profile tooth** and **positive rake angle.**
Aggressive cutting with **low tendency to vibrate**, resulting in a **very quiet sawing process.**
Proven **M42 teeth** and special flexible backing with increased load capacity.
Ideal for **sawing tasks that are prone to vibrations**, such as hollow and angled sections, carriers as well as material bundles and layer cuts, but also for flat material.

17 4062 – **bi-alfa Profile: High-performance bi-metal saw blade** with **M42** alloy high-speed steel (HSS) tooth tips.
The **reinforced back of the tooth** increases the resistance to overloading of the tooth due to **vibrations during interrupted cutting.**
For tooth pitches **3/4 and 4/6**, an **optimised** tooth profile ensures high performance in **process-controlled sawing operation.**

17 4064 – **Bi-alfa profile WS: High-performance bi-metal saw blade** with **M42** alloy high-speed steel (HSS) tooth tips.
The **reinforced back of the tooth** increases the resistance to overloading of the tooth due to **vibrations during interrupted cutting.**
The WS version generates a wide cutting channel to prevent jamming, especially for materials with internal stresses.
The **optimised tooth profile** ensures high performance in **process-controlled sawing operation.**

Variable pitch teeth 10° ground

bi-alfa Master: High-performance bi-metal saw blade with **M42** alloy high-speed steel (HSS) tooth tips.
With **special ground finish on the taper tap** (tooth height difference) for improved cutting guidance.
Optimally suitable for solid material (from 50 mm) of all common **high and very high-alloy steel grades** up to a hardness of <45 HRC.

Variable pitch teeth 16° ground

Master Supreme: Tooth tips made of high-speed alloy steel (HSS) **M51**, with **increased thermal and mechanical wear resistance.**
The ground **taper tap improves the cutting guidance** and the cutting behaviour, especially for large material cross-sections and the **extra-wide teeth setting prevents jamming of materials with internal stresses** (e.g. forgings).
Ideal for machining **high and very high-alloy steel grades.**

Carbide

RÖNTGEN

Carbide-tipped band saw blades, welded to length as ordered

RÖNTGEN carbide titanium:
Carbide-tipped band saw blade with ground tooth profiles. (Hardness approx. 1600 HV). Very high rate of metal removal.

Note: When placing an enquiry, please indicate the band saw machine (manufacturer and type), band dimensions, material, and material cross section.
General-purpose small workshop machines (tilting frame bandsaws with saw blade width 27×0.9 mm) are generally not designed for use with carbide-tipped saw blades.
Our application engineers will gladly offer you further technical advice.
Further information can be found in the **GARANT machining handbook No. 110020** or from **RÖNTGEN Cutting Solutions (RCS)** at https://www.roentgen-saw.com/RCS/.
Price each = price per running metre × band length **incl. welded joint.**
Order information: Item number and size (teeth per inch) × desired length (mm).
Example: 5 pieces No. 174113 size 2/3 × 4640 mm.

Carbide-titanium MU

Tooth tips made of **high-quality carbide (HM) with positive rake angle (10°)** and a backing made of high-alloy spring steel. Suitable for **general applications**, especially in all common steel grades up to a tensile strength of 1700 N/mm². **The smooth running** and **optimised cutting surface** are achieved by a **highly precise grinding geometry of the teeth**.

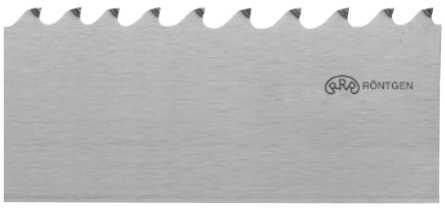
Carbide - titanium B0

Carbide (HM) tipped high-performance saw blade with special geometry and a **rake angle of 0°.**
Especially suitable for hardened/induction-hardened and high-hardness materials > 50 HRC.
The B0 can be used on sawing machines with limited power.

Note:
17 4122/4123 Size 3/4 – For the configurations, a forte C-coated variant with a performance increase of 20-30% is available on request.



17 4121

Carbide-titanium MUSN

Carbide (HM) tipped high-performance saw blade **with a negative rake angle (-18°) and special tooth geometry to increase the machining parameters. Especially suitable for sawing hardened/induction-hardened and high-hardness materials >50 HRC.** Use requires a **powerful band saw machine.**

Note:
Size 3/4 – For the configurations, a forte C-coated variant with a performance increase of 20-30% is available on request.

3/4	(eShop)	(eShop)	Combi	–18

Carbide-titanium nSET

Carbide (HM) tipped high-performance saw blade with a **positive rake angle (11°).**
The **normal set** generates a cutting channel in which the **jamming of the saw blade is prevented, especially in the case of internal material stresses** (e.g. in Inconel, Hastelloy or forged materials)**.**
Suitable for sawing all common types of steel up to a tensile strength of 1700 N/mm^2 and especially for **large contact lengths.**
The saw blade can also be used on powerful bi-metal sawing machines.

Note: Quality carbide-titanium SET (item number 174161 to 174167) is still available. Just contact us with your request.

Carbide-titanium forte C

Carbide (HM) tipped high-performance saw blade with a **positive rake angle (10°)** and **special tooth geometry** to increase the machining parameters.
Performance increase in comparison to the quality carbide-titanium MU of 10-30% with the same tool life due to **forte C coating.**
The **cutting edges are pre-rounded,** eliminating the need to run the belt in.

RÖNTGEN Metal band-saw blades

Tooth spacing for carbide-titanium saw blades

Tooth pitch	Material Ø
0.85/1.15	> 500 mm
1.1/1.6	350 – 600 mm
1.5/2	150 – 400 mm
2/3	100 – 250 mm
3/4	50 – 120 mm

Type **carbide-titanium ALU** (specially for aluminium materials) available on request.
Different versions are available depending on the available bandsaw and component shape (plates, castings, pipes).

HSS

Re-Bo Metal circular saw blades

All blades are hollow ground to give side clearance.
All sizes with 200 mm ∅ and very thin blades have a bore collar for stabilisation.
Accuracy, tooth form, and side clearance grinding according to DIN 1840.

17 5000 – **DIN 1837 A fine-toothed** with raked teeth form A.
Straight teeth with relatively small indentations.

17 5500 – **DIN 1838 B coarse-toothed** with curved form B.
Curved teeth with relatively large tooth indentations.

17 6000 – **DIN 1838 C coarse-toothed** with curved form C.
High performance tooth pitch (HZ) **with high teeth and lower finishing teeth.** The roughing tooth is 0.15 – 0.30 mm higher than the finishing tooth and is chamfered at both tooth corners. In this way both types of teeth share the cutting work.

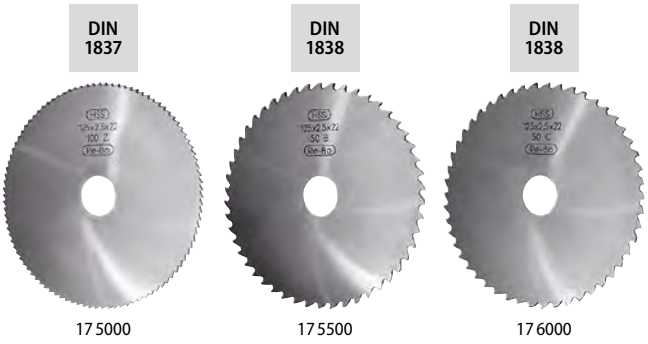
Application:

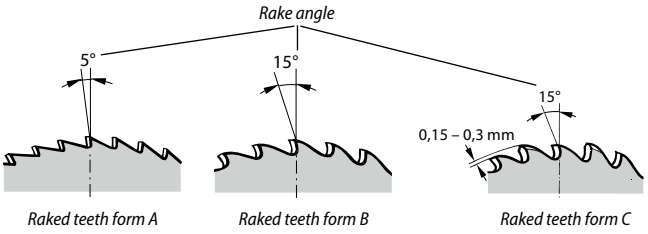
17 5000 – For thin-walled components and small cutting depths.

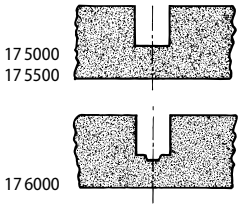
17 5500 – These blades are suitable for more universal use due to the improved chip formation and larger gullets compared to No. 175000. Should be used for thicker materials and greater cutting depths.

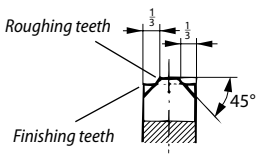
17 6000 – Particularly suitable for cutting workpieces with low to medium tensile strength. High cutting performance due to the chip breaking tooth form.
Please note: If the component is not cut through, but only cut into, the bottom of the cut will have an additional slot due to the projecting high tooth.

Note:	The concentricity and axial run-out values are considerably better than the figures according to DIN 1840, in some cases by up to 50 %.









Arbors for saw blades
∅ 20 – 100 mm
see No. 34 5510 / 34 5555

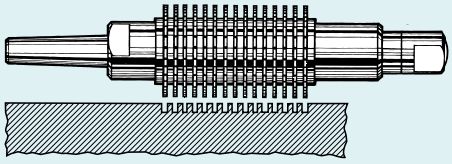
Metal circular saw blades for special applications

Please make a note on your order if you want to use the metal circular saw blades in sets.
These blades will then be gauged as a set and ground plane parallel as a precision matched set, hollow ground from teeth to collar (spacer ring Ø). This arrangement must be made to order. We also need further information on the order if dimensional tolerances are tighter than DIN, or for special tooth formats or fully surface ground types, for keyways or pinholes etc.

On request:

- Metal circular saw blades with hard coating "Re-Bo-TiN" or "Re-Bo-Top" for difficult machining applications in industrial use.
- Driving slots can be produced if required.



HSS

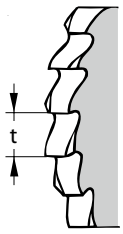
Metal circular saw blades

Application: On low speed machines (approx. 50 rpm).
Pitch t: (tooth form).

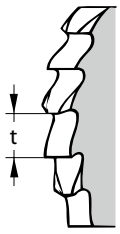
- 4 mm (BW) – For profiles and pipes with 1.0 – 1.5 mm wall thickness.
- 5 / 6 mm (HZ) – For medium profiles, tubes and solid material with 1.5 – 20 mm wall thickness or cross–section.
- 7 / 8 mm (HZ) – For thick profiles and solid materials up to approx. 50 mm wall thickness or cross-section.
- 10 – 16 mm (HZ) – For extra thick cross-sections and solid material more than 50 mm.

Note:

- **For stainless steels (such as V2A)** the correct cutting speed and lubrication is crucial (see information in the machining handbook, No. 110020).
- The concentricity and axial run-out values are considerably better than the figures according to DIN 1840, in some cases by up to 50 %.



*t 4 mm = **BW** curved teeth set alternately*



*t from 5 mm = **HZ** tooth configuration with roughing and finishing teeth*

Metal circular saw blades, coarse version

177400 – **German top quality product.** Precision tooth geometry and very fine ground side faces. Significant increase in service life and protection against edge build-up due to the **nitrided surface.**

177455 – Precise format and good quality for a competitive price. **Vaporised surface** protects against edge build-up.

Note:

177455 – **Successor product to No. 177450.**

HSS E

Re-Bo VA circular saw blades, for stainless steels

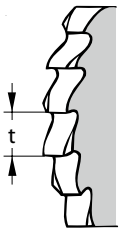
Precision toothing and very fine ground side faces. **Rake angle especially for stainless steels.**
Nitrided surface: hard, durable protection against edge build-up.

Suitable for: **EISELE** and **TRENNJAEGER** cold circular saws.

Application: **Pitch t:** (tooth form)

- 3 mm (BW) – For thin pipes, profiles, sheet metal with 1 – 2 mm wall thickness.
- 4 mm (BW) – For pipes, profiles, sheet metal with 1.5 – 4 mm wall thickness.
- 6 mm (HZ) – For pipes, profiles and solid material above 4 mm wall thickness or cross–section up to a maximum of. 50 mm.
- 8 mm (HZ) – For solid material above 50 mm.

Note:
- For optimum performance and service life: use coolant concentrate No. 084260.
- The concentricity and axial run-out values are considerably better than the figures according to DIN 1840, in some cases by up to 50 %.



*T 3/4 mm = **BW***

Carbide

Garant

Carbide tipped circular saw blades for non-ferrous metals

High performance toothing with high teeth and lower finishing teeth. The trapezoidal carbide tips cut easily and generate clean cut surfaces.

Advantage: Particularly suitable for hard anodised profile material.

Application: **On high-speed machines.**
F = fine tooth pitch for thin walled profiles or plates up to 5 mm thickness.
M = medium tooth pitch for profiles and pipes with greater than 5 mm thickness.
G = coarse tooth pitch for solid material such as bars and rods.

17 9600 – **Positive rake angle 5°** for smooth, burr-free cutting on machines with saw blade infeed from below or horizontal. Very suitable for cutting to size, for mitre and ripping cuts on profiles, and for cutting into solid material.

17 9700 – **Negative rake angle 6°** for use on machines with oscillating saw blade infeed from above. Advantageous for thin profiles.

Note:
- Recommended cutting speed: 40 – 80 m/s, for harder materials such as alloys, brass, or bronze it is preferable to use the lowest recommended speed.
- Pay special attention to maintaining an even feed rate; this prevents damage.
- **Additional versions on request.**
- **Further circular saw blades can be found in catalogue volume 2.**

17 9710

Solid carbide

Re-Bo Solid carbide circular saw blades

Top quality German product with **precision toothing** and **hollow ground mirror finish sides**.
Compared to HSS saw blades, the cutting speed can be increased by a factor of 3 to 4.

17 9800 – **DIN 1837 A fine-toothed** with **raked teeth to form A** with chisel edge.
For thin-walled components and small cutting depths.

17 9820 – **DIN 1838 B coarse-toothed** with **curved teeth to form B** with chisel edge.
For cutting larger cross sections and greater cutting depths.
These blades are suitable for more universal use due to the improved chip formation and larger gullets compared to the fine-toothed version.

Note:
- Stable conditions of machine and component clamping are important prerequisites. If these conditions are disregarded the circular saw blade may break.
- The values for radial run-out and axial run-out are considerably better than the values specified in DIN 1840.
- Special sizes on request.

Solid carbide

GARANT solid carbide circular saw blade with extra narrow cutting width in order to minimise the loss of material. The cutting speed can be **increased by a factor of 3 to 4** compared to HSS saw blades. Reinforced collar for a significant increase in the stability of the saw blade. For flat base of the slot.

Note: The tolerances for the circular saw blade diameter are considerably better than the values permissible to DIN 1837/1838, in some cases by up to 50%.
Size 40×1 – Tooth profile B.
Size 50×1–125×2 – Tooth profile BW.

Carbide

GARANT carbide-tipped circular saw blade for extra deep saw cuts. Unequal spacing of the saw blade teeth for smooth cutting. We recommend radial feed to minimise vibration and increase the working life of the saw blade.

17 9925 – Carbide substrate. Tooth form and number of teeth specially configured for machining aluminium.
17 9930 – Carbide substrate. Tooth form and number of teeth specially configured for machining steel. Very well suited even for steel < 1100 N/mm².

SIMTEK simmillQX SIMTEK milling tools type QX

SOLID CARBIDE SIDE MILLING CUTTER. SHARP TEETH FOR EFFICIENT SLOT MILLING.

High-performance side milling cutter made of solid carbide for slot milling.

We would be pleased to advise you!
Custom solutions on request.

In eight different cutting widths.

Tool diameter of 50 mm and 63 mm.

Each version available as sharp-edged or with a corner radius of 0.2.

Coatings
X700 for applications in P and K materials.
X500 for applications in M, N and S materials.

18

Note
Following an update to the range, the SIMTEK
solid carbide side milling cutter replaces the GARANT side milling cutter 18 5015.

Suitable GARANT toolholders:

300835_13/_16 302895_13/_16 306110_13/_16

HSS Co5 | DIN 885 A | Type N | js16

Garant

Side milling cutter

Staggered teeth with collar and keyway.

Application: For **slotting or cutting-off** when the side faces of the component must have an accurate and clean surface.

Note: f_z for $a_e = 0.1 \times D$.

End mill

Multi-flute end mill. **Eccentric relief ground.**

19 1500 – Centre cutting edge geometry for plunging.

19 1520 – For the highest demands in respect to material removal rates. **Excellent results** when **milling dry.** Size 6M–25M **MID mills:** Dimensions to **manufacturer's standard,** which lies **between** DIN 844 **short** and DIN 844 **long**. **Particularly suitable** for **mould** and **tool making**, as the **medium length** provides higher **rigidity** than long series mills to DIN 844.

19 1590 – Economy version.

3 4 5

Garant Roughing end mill MTC

SPM substrate with very high cobalt content. Combines the **hardness of solid carbide** with the **toughness of PM steel. Dynamic special knuckle profile for roughing.**
For use as a universal roughing end mill Centre cutting edge geometry for plunging.

Application: **For very high metal removal rates and increased machining volumes.** Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

5 | 6

Garant Roughing end mill

Relief ground knuckle form profile.
End face recessed. Wide lands permit frequent regrinding without losing the profile.
Advantage: For roughing at low cutting depths (predominantly face milling).
Very reliable, due to lower load on the machine spindle.

Categorisation of the tools by application based on DIN ISO 513

Material group	Material designations		Strength (N/mm²)
17.0	Long-chipping Al; wrought Al alloy; Mg	N	< 530
17.1	Short-chipping Al alloys	N	< 600
17.2	Cast Al alloys > 10 % Si	N	< 600
18.0	Low-alloy copper	N	< 400
18.1	Short-chipping brass	N	< 600
18.2	Long–chipping brass	N	< 600
18.3	Short–chipping bronze	N	< 600
18.4	Short–chipping bronze	N	650 – 850
18.5	Long-chipping bronze	N	< 850
18.6	Long-chipping bronze	N	850 – 1200

GARANT Master Alu*

20 2004, GARANT Master Alu PickPocket

20 3115, GARANT Master Alu milling cutter TPC

20 3205, GARANT Master Alu finishing cutter

20 5282, GARANT Master Alu SlotMachine

N

Material group	Material designations		Strength (N/mm²)
10.0	Hardened steels	H	45 – 50 HRC
10.1	Hardened steels	H	50 – 55 HRC
10.2	Hardened steels	H	55 – 60 HRC
10.3	Hardened steels	H	60 – 65 HRC
10.4	Hardened steels	H	65 – 67 HRC
10.5	Hardened steels	H	67 – 70 HRC

GARANT hard machining*

20 1631, Diabolo solid carbide micro slot drill

20 3221, GARANT Diabolo solid carbide milling cutter HRC 62

20 3079, solid carbide milling cutter with chip separators

20 6342, Diabolo solid carbide torus cutter

20 7523, solid carbide barrel milling cutter PPC

20 8158, Diabolo solid carbide deburrer, spiral flutes

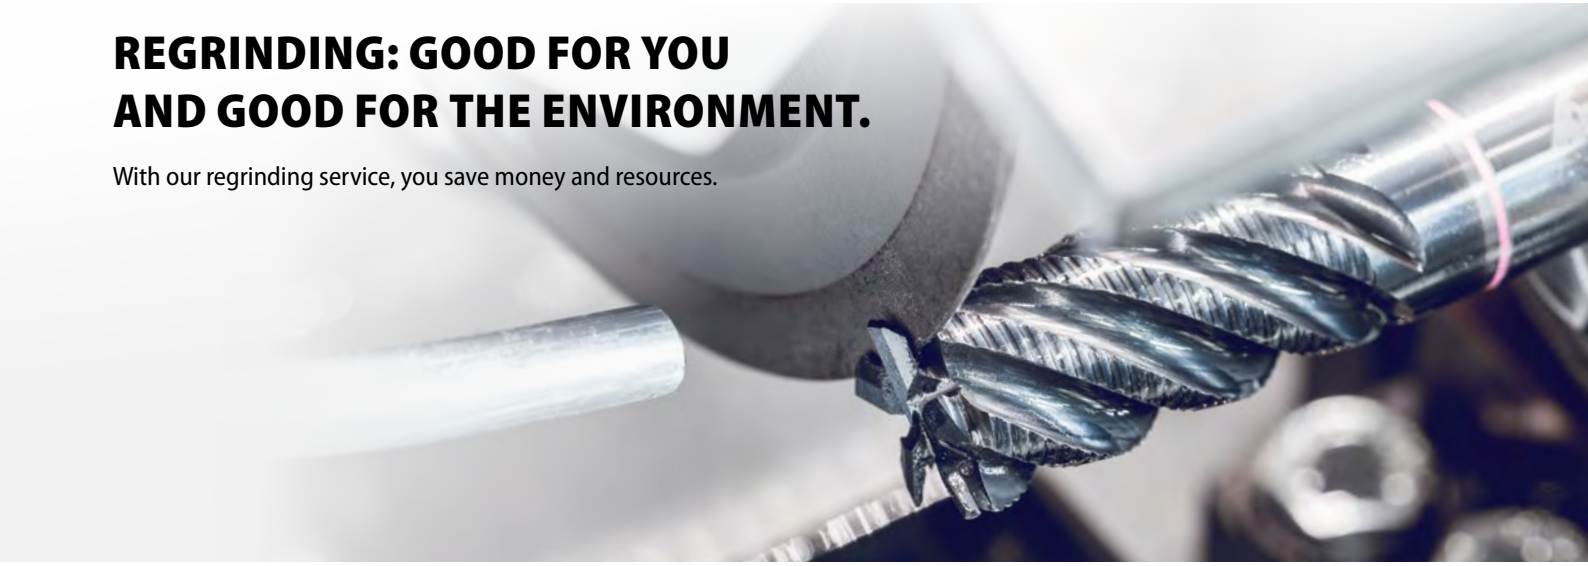
REGRINDING: GOOD FOR YOU AND GOOD FOR THE ENVIRONMENT.

With our regrinding service, you save money and resources.



Hoffmann Group
Regrinding service

Good for you

It is already worth it from the first regrind. Overall, you can expect amazing savings of up to 85%. And all with the original regrind quality, to the original geometry and on the original production machines. There are no compromises here. **In addition:** Of course, we also provide you with excellent regrinding results for your third-party brands!

Good for the environment

Reusing the tool saves valuable resources and avoids unnecessary waste. In addition, the shorter transport distances also ensure a reduced CO_2 footprint. A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service. **An all-round worry-free package has never been so easy – and with maximum cost transparency.** For you, this means the highest precision and reliability as quickly as possible.

> "The efficiency and quality of the reconditioned tools due to the original regrind quality surprised me very positively!"
> **Marin Engelsberger, Bacher GmbH**

Further information on the regrinding service:
Discover all about our services online now.

Garant GARANT Master Alu solid carbide slot drill HPC

Advantages of precision balanced GARANT Master Alu solid carbide slot drills

- Low-vibration milling, particularly at high speeds.
- Significant lengthening of the machine spindle life cycle.
- Significantly longer working life of the tool.
- Improved surface quality of the workpiece.

Solid carbide | Standard | Type W | 0 −0.005 | 2 | a_e 0.5×D | h5 DIN 6535 HA

25° ≤ 0.8 mm | 30° ≥ 1 mm

Garant Solid carbide precision micro slot drill

With **advanced DLC sp² coating.**
For the **highest demands regarding performance and precision in aluminium materials. Extremely tight tolerances** ensure maximum accuracy.
Double relief ground with 2 hollow-ground chamfers. **Recess angle α = 16°.**
Tolerances:

- Neck Ø: **D_1 = 0 / -0.01 mm.**

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
slots milled from solid: $a_p = 0.25 \times D \times a_{p\,corr}$
side milling: $a_p = 0.5 \times D \times a_{p\,corr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

Solid carbide | Standard | Type H | 0 −0.005 | 2 | a_e 0.1×D | h5 DIN 6535 HA

25° ≤ 0.8 mm | 30° ≥ 1 mm

Garant GARANT Diabolo solid carbide precision micro slot drill

GARANT Diabolo:
Special geometry, coating and carbide **for hard machining in the high-performance field.** Suitable even for **machining electrolytic copper.** Double-relief ground 2 chamfers hollow ground for high-precision hard machining.
Tolerances:
Neck ∅: **D_1 = 0 / -0.01 mm.**
Recess angle α = 16°.

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
slots milled from solid: $a_p = 0.05 \times D \times a_p$ korr
side milling: $a_p = 0.1 \times D \times a_p$ korr
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)! e.g: vf = 18000 [rpm]× fz [mm/Z]× z

Solid carbide	Standard	Type H	0 −0.02	2	35°	≠			a_e 0.05×D	h6 DIN 6535 HA	HPC

Garant Solid carbide milling cutter HPC

GARANT Diabolo 70:
Special solid carbide substrate with extremely high tensile strength combined with **outstanding wear resistance** for optimum process reliability. Newly developed **nano-crystalline high-tech coating for hard milling up to 70 HRC.** Very suitable for **continuous use** in tool and mould making.
Sizes 0.5 – 5: **Recess angle α = 15°.**

Application: Due to the **special hard geometry** ideal for use on hardened materials from 60 HRC to 70 HRC.

Note: f_z for a_p = 0.05×D.

Garant GARANT Master INOX solid carbide milling cutter HPC

Double relief ground **2 chamfers hollow ground** for use in **HPC applications.**
Greater oxidation resistance and high-temperature hardness.
Can be used at high cutting speeds, particularly suitable even for Toolox®.

Note: **Successor product to No. 201644.**

Garant

Solid carbide milling cutter MTC

With the latest generation of **DLC coating sp²**.
Eccentric relief ground, additionally **polish ground** in the flutes for **outstanding chip evacuation** in long-chipping aluminium components.
Lengths similar to **DIN 6527 long.**

20 2272 – **Without** 45° corner chamfer.
Size 1–2 – tolerance: Size nominal ∅ D_c = **e8.**
Size 2.5–20M – tolerance: Size nominal ∅ D_c = **h6.**

Application: Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

Note:
20 2270 – **NEW GENERATION AVAILABLE! Recommended successor products are No. 202004 and No. 202010.**
20 2278 – **NEW GENERATION AVAILABLE! Recommended successor product is No. 202006.**

Garant

GARANT Master Alu PickPocket solid carbide roughing end mill HPC

For roughing and finishing.
Up to 2 × D into solid material at very high feed rates and smooth cutting action.
Very high feed rates when plunging vertically.
Ramping capability up to 45°.

20 2006 – Improved chip evacuation due to central through-coolant. Due to the patented geometry also suitable for boring.
20 2004/2006/2010 – With the latest generation of DLC coating sp^2.

Advantage: **Optimised flute form, eccentric relief ground, generous chip spaces.**

Solid carbide | Standard | Type W | 3 | 42° | ≠ | ≠ | h6 DIN 6535 HA | G 2.5 n_{max} | HPC

GARANT Master Alu PickPocket solid carbide roughing end mill HPC

For roughing and finishing.
Up to 2×D into solid material at very high feed rates and smooth cutting action.
Very high feed rates when plunging vertically.
Ramping capability up to 45°.

20 2014–2019 – With the latest generation of DLC coating sp^2.
20 2015/2019 – Improved chip evacuation due to central through-coolant.
20 2017/2019 – Very long overhang for safe machining of deep cavities.

Advantage: **Optimised flute form, eccentric relief ground, generous chip spaces.**

Note: A minimum oversize of 0.1×D must be maintained for subsequent finishing operations.

Solid carbide | Standard | Type N | e8 | a_e 0.5×D | h6 DIN 6535 HA | HPC

GARANT Master Titan solid carbide mini milling cutter / GARANT Master Steel solid carbide mini milling cutter

Extra short cutter for maximum stability. **Shank length to DIN** for improved support of the tool in the holder. This significantly increases the tool life.

20 2287 – Attractively priced and extra stable version for **high-power machining of titanium.**

20 2289/2295 – Tool for **general-purpose machining.**

Note:

20 2289 – For **HB shanks** use order **no. 202291**.

20 2295 – For **HB shanks** use order **no. 202297**.

20 2289/2295 – HB shanks are available at the same price as HA.

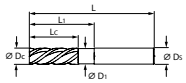
Solid carbide | Type N | h10 | 3 | 40° | ≠ | ≠ | h6 DIN 6535 HB | HPC



Garant GARANT Master INOX solid carbide milling cutter HPC

For roughing and finishing
HPC milling cutters with **newly developed high-performance coating** for **outstanding service life** and **optimum metal removal rates** in a wide range of stainless steels.
Greater oxidation resistance and **high-temperature hardness**.
Can be used at **high cutting speeds**, particularly suitable even for TOOLOX®.
20 2387 – Dimensions similar to **DIN 6527**.

Solid carbide | Type N | f8 | 3 | 45° | ≠ | ≠ | MTC

Garant Solid carbide milling cutter MTC

Special flute profile. Strengthened core.
MTC rough milling up to 1.5×D in solid material.
Eccentric relief ground.

20 2391 – Particularly sturdy due to short overall length. Overall length similar to **DIN 6527 short.**

20 2396/2399 – Improved coating for a further reduction in cutting force combined with increased tool life.

20 2392/2396 – Lengths similar to **DIN 6527 long.**

Application: Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

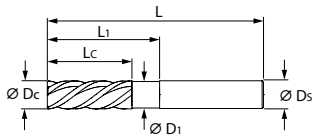
Solid carbide | Type N | f8 | 3 | 38° | ≠ | ≠ | a_e 0.4×D | h6 DIN 6535 HB | HPC



Garant

GARANT Master Steel PickPocket solid carbide roughing end mill HPC

For **roughing and finishing**
With corner radii similar to torus cutters.
Up to 1×D into solid material **at very high feed rates** with smooth cutting action.
20 2402 – Corner radii matched to DIN specifications for **drive keyways**.
Advantage: Optimised flute form, eccentric relief ground, wide chip space.

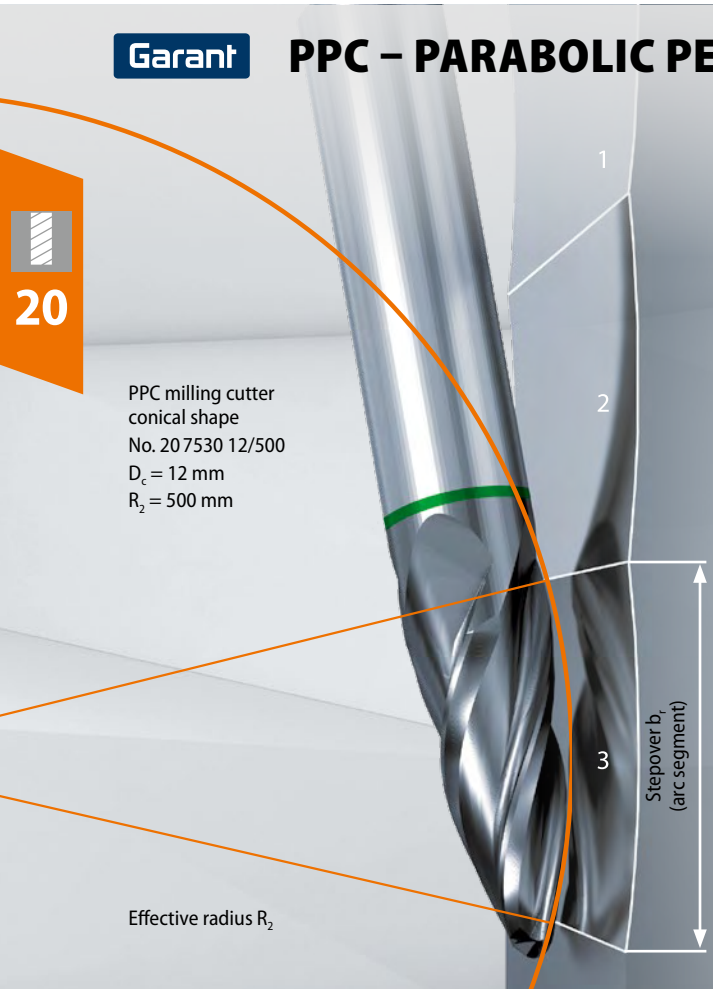
Garant PPC – PARABOLIC PERFORMANCE CUTTING

20



PPC milling cutter
conical shape
No. 20 7530 12/500
D_c = 12 mm
R_2 = 500 mm

Dynamic 5-axis milling.
Reduce process times and increase surface quality.

Advantages of the PPC process:
- Shorter machining times due to the large stepover.
- Lower set-up costs.
- Higher surface qualities at shorter cycle times.
- Outstanding process reliability.
- Extreme wear resistance.
- Increased productivity.

The right tool
for every application

The entire range can be found from page 547 of this catalogue.

Solid carbide | DIN 6527 | Type W | h6 | 4 | 38° | a_e 0.5×D | h6 DIN 6535 HA | HPC

Garant GARANT Master Alu solid carbide milling cutter, HPC

Extra sharp cutting edges.
Dimensions similar to DIN 6527.
Double relief ground side clearance angle.
For roughing and finishing. Up to 2×D into solid material at very high feed rates and smooth cutting action.

Note: **Successor product to No. 202480.**

Solid carbide | Standard | Type H | f8 | 4 | 45° | TPC $a_{e\,max}$ 0.1×D | a_e 0.15×D | h6 DIN 6535 HA | HPC | TPC

Garant Solid carbide milling cutters ISO H55 HPC/TPC

For machining **steels** in the transition range between the **ISO material groups P and H.**
Specially developed for steel materials with **tensile strengths of 1000-1500 N/mm²** and for **hardened steel materials up to HC 55.**
Micro-grain substrate and coating are coordinated to achieve the **longest service life and process reliability.**
Soft cuts due to 45° helix angle.

Solid carbide | Type N | e8 | 4 | 40° | ≠ | a_e 0.3×D | HPC

Garant

INOX solid carbide milling cutter HPC, INOX solid carbide milling cutter with chip separators HPC/TPC

Milling cutter with **optimised geometry** and modern **high-performance coating** for optimum metal removal rate in various **stainless steels.**
Can also be used in **duplex materials**.
Dimensions similar to DIN 6527.

Note:

20 2950 – **Successor product to 202986.**
20 2952 – **Successor product to 202989.**
20 2954/2956 – **With chip separators for controlled chip breaking**. For reliable working in automated production environments thanks to reliable chip evacuation from the component. Cutting data for TPC machining in the ToolScout.

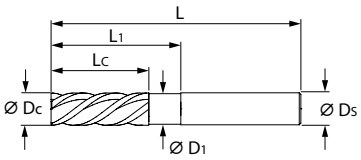
Solid carbide | Type N | h10 | 4 | 40° | ≠ | ≠ | h6 DIN 6535 HB | HPC



Garant GARANT Master INOX solid carbide milling cutter HPC, HPC/TPC

For **roughing and finishing**.
HPC milling cutter with **newly developed high-performance coating** for **outstanding tool life** and **optimum metal removal rate** in a very wide range of stainless steels. **Greater oxidation resistance** and **high-temperature hardness**.
Can be used at **high cutting speeds**, particularly suitable even for TOOLOX®.

20 2999 – With **internal coolant supply** for reliable chip evacuation.

Advantage: Particularly low vibration running.

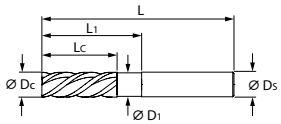
Solid carbide | DIN 6527 | Type N | f8 | 4 | 35° | h6 DIN 6535 HB | HPC



HOLEX Pro INOX solid carbide milling cutter HPC

HPC milling cutters with **newly developed high-performance coating** for **outstanding tool working life** and **optimum metal removal rates** in a wide range of stainless steels.
For use at **high cutting speeds**,
particularly suitable even for steels up to approx. 1100 N/mm².

20 3027 – With **internal coolant supply** for reliable swarf evacuation.

Solid carbide | DIN 6527 | Type N | 4 | ≠ | HPC

Garant GARANT Master Titan solid carbide milling cutter HPC / GARANT Master Ni-Based solid carbide milling cutter HPC/TPC

Specially ground with **corner radii similar to torus cutters.**

20 3048 – Innovative substrate specially for machining **nickel-based alloys.** Newly developed coating.

Application:

20 3029 – For milling **titanium and titanium alloys**, with very smooth cutting action for optimum tool life and top metal removal rate.
20 3048 – For milling **nickel-based alloys with high red hardness.**

Note:

20 3048 – **Successor product** to **No. 203028.**

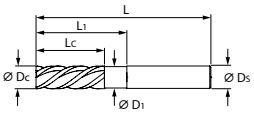
Solid carbide | DIN 6527 | Type N | f8 | 4 | 38° | h6 DIN 6535 HB | HPC



GARANT Master Steel solid carbide roughing end mill HPC

For **roughing and finishing.**

20 3034 – Up to 1×D into solid material **at very high feed rates** with smooth cutting action.
At maximum machining depths, ensure compliance with the ratio dimension L_C (cutting length) / Ø (nominal size)!

20 3039/3035 – Up to 1.5×D into solid material **at very high feed rates** with smooth cutting action.

Advantage: Optimised flute form, eccentric relief ground, wide chip space.

Solid carbide | Standard | Type N | f8 | 4 | 35° | ≠ | ≠ | a_e 0.3×D | h6 DIN 6535 HB | HPC

Garant GARANT GreenPlus solid carbide milling cutter HPC

For **roughing and finishing** with **very high cutting data.**
Optimised core geometry ensures a **low tendency to vibrate** and thus significantly **increased tensile strength**.
Innovative geometry and high-performance coating allow the machining of **different materials** while maintaining **high temperature resistance.**

Advantage: **In the milling cutter range of the Hoffmann Group**, the production of the **micrograin carbide substrate rod** currently has the **lowest product-specific CO_2 emissions**, thus **reducing the environmental footprint** compared to conventionally produced carbide rods.

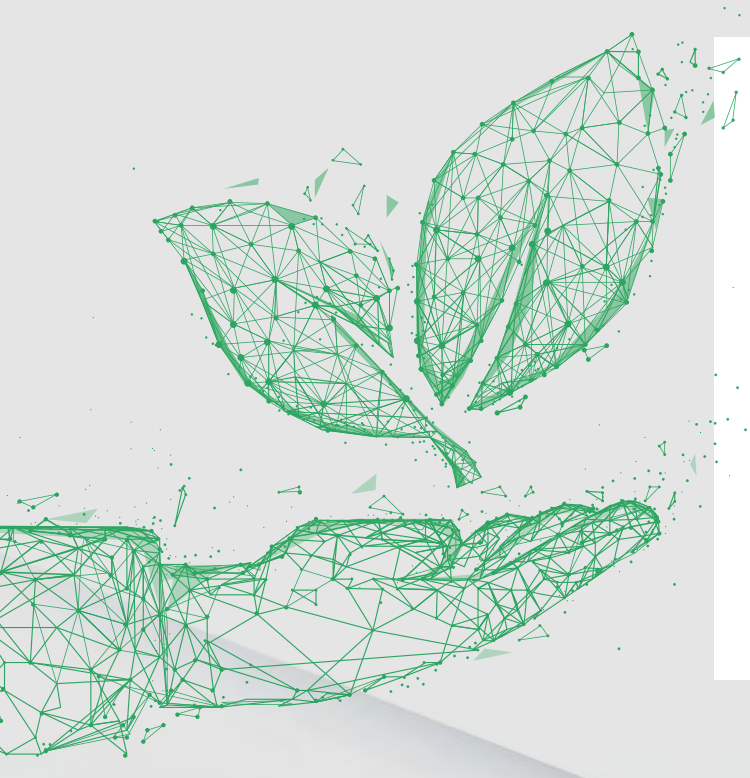
PRODUCED IN A WAY THAT CONSERVES RESOURCES.



Carbide rod

- Made from more than 99% secondary raw materials.
- The carbon footprint of the carbide rod during production is reduced * by approx. 65% compared to a conventionally produced carbide rod.
- Same mechanical properties as a conventional carbide rod.

Furthermore:

- Milling cutter production with electricity 100% from renewable sources.
- 100% recycled plastic packaging.
- Can be reground up to 3 times (see regrinding service from the Hoffmann Group).

Garant GREENPLUS

* The stated reduction in carbon footprint refers exclusively to the CO2 equivalent during production of the carbide rod.

Solid carbide | Type N | 0 –0.03 | 4 | 38° | ≠ | HPC

HOLEX Pro Steel solid carbide roughing end mill HPC

For **roughing and finishing.**

20 3052 – Up to 1×D into solid material **at very high feed rates** with smooth cutting action.
At maximum machining depths, ensure compliance with the ratio dimension L_c (cutting length) / Ø D_c (cutting Ø)!

20 3054 – Up to 1×D into solid material **at very high feed rates** with smooth cutting action. Dimensions to **manufacturer's standard.**

Advantage: Optimised flute form, eccentric relief ground, wide chip space.

Garant GARANT Master UNI solid carbide milling cutter HPC

For **roughing and finishing at very high feed rates** with smooth cutting action. **Newly developed geometry and high-performance coating** for excellent production results with maximum tool life in various materials. **High intrinsic stability** and smooth cutting action due to unequal spacing.

Advantage:
- Particularly low vibration running.
- Special flute profile, large flutes.
- Specially matched edge honing.
- Optimised substrate for hardness and toughness.

Solid carbide | Standard | Type N | e8 | 4 | 45° | ≠ | h6 DIN 6535 HB | G 2.5 nmax | MTC

Garant

Solid carbide roughing end mill MTC

For **roughing and finishing** up to 1.5×D into solid material **at very high feed rates** with smooth cutting action.
For cutting force reduction and better surface quality due to **45° helix.**
Improved coating for a further reduction in cutting force combined with increased tool life.

Application: Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

Garant

GARANT Master Alu solid carbide milling cutter TPC with more chip separators

Specially designed for TPC high-performance milling.
Optimised bending strength due to the use of ultra-fine grain substrates.
1×D chip separator for controlled chip breaking.
Balanced for very high process reliability and protecting the machine at high speeds.
Application: Especially for milling **aluminium and non-ferrous metals.**

Note:
20 3113 – h_{max}: The values stated in the table are maximum values.
ae_{max} = 0.15×D for TPC machining.
20 3114 – h_{max}: The values stated in the table are maximum values.
ae_{max} = 0.12×D for TPC machining.
Successor product for No. 202281, 202282.
20 3115 – h_{max}: The values stated in the table are maximum values.
ae_{max} = 0.1×D for TPC machining.
Successor product for No. 202283, 202284.

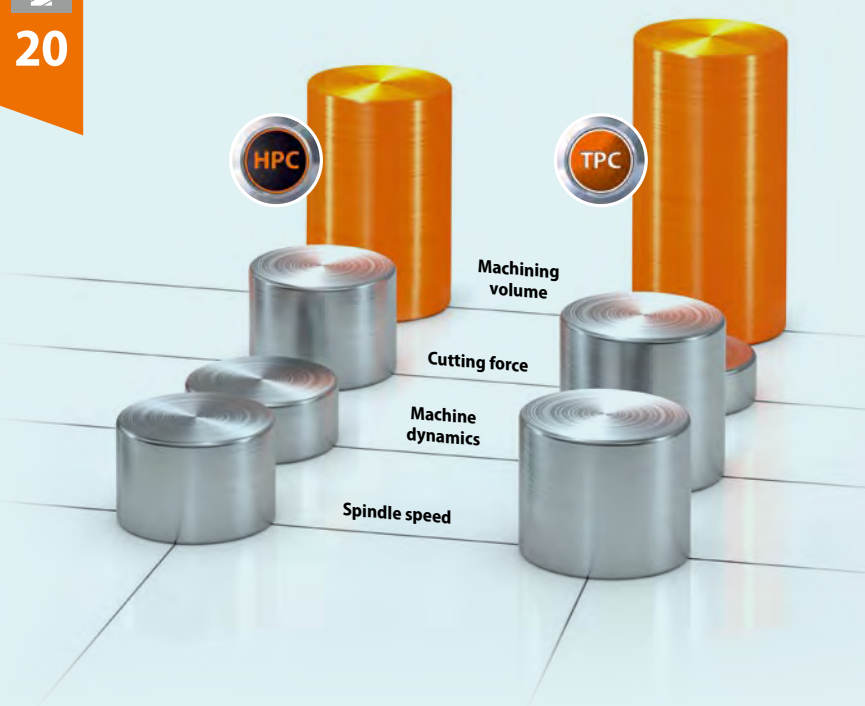
Milling processes compared



HPC
High Performance Cutting

- High feed rates.
- Very low degree of vibration due to unequal spacing.
- High chipping rates due to high a_p and a_e.

Lower cutting speeds than with HSC.

TPC
Trochoidal Performance Cutting

- Very high metal removal rate, especially when used on difficult-to-machine materials.
- Very high dynamic path speed.
- Very low cutting force.
- Low wear.
- High savings potential compared to the conventional strategy.

Requirements for successful TPC machining

- A modern CAM system or modern machine control.
- A machining centre with the most dynamic characteristics possible.
- TPC tools from GARANT – specially developed for the requirements in trochoidal application.

Solid carbide | Standard | Type N | f8 | 5 | 40° | ≠ | h6 DIN 6535 HB | G 2.5 n_{max} | TPC

Garant Solid carbide milling cutter TPC with chip separators

High-performance end mill for general-purpose applications, **specially designed for TPC applications**.
Strengthened core.
Optimised bending strength due to the use of ultra-fine grain substrates.
Offset chip breakers for controlled chip breaking.

Note:
h_{max}: The values stated in the table are maximum values. For finishing operations we recommend items No. 204016, 204018 and 204019.
20 3093 – $a_{e\,max}$ = 0.05×D for TPC machining.
Successor product to No. 203090.
20 3094 – $a_{e\,max}$ = 0.03×D for TPC machining.
Successor product to No. 203091.

Solid carbide | Standard | Type N | f8 | 6 | 36° | h6 DIN 6535 HB | G 2.5 n_{max} | TPC

Garant GARANT Master INOX solid carbide milling cutter TPC with chip separators

High-performance milling cutter with **irregular cutter spacing** and **irregular helical pitch.**
High process reliability and **better chip evacuation** due to **increased flutes.**
Optimised carbide substrate for **higher bending strength** and **extreme tool life**, even in stainless steels in the high-performance field, especially duplex.
Chip separator positioned offset **at cutting edges.**

20 3120 – Internal cooling version for improved chip evacuation.

Advantage: Lower pull-out forces due to reduced helix angle.

Note:
h_{max} : The values stated in the table are maximum values. For finishing operations we recommend items No. 204012, 204014, 204015, 204016, 204018 and 204019.
20 3116 – $a_{e\,max}$ = 0.12×D for TPC machining.
20 3118 – $a_{e\,max}$ = 0.07×D for TPC machining.
Successor product for No. 203104 and No. 203107.
20 3119 – $a_{e\,max}$ = 0.04×D for TPC machining.
Successor product for No. 203105 and No. 203108.
20 3117/3120 – $a_{e\,max}$ = 0.1×D for TPC machining.

Garant Solid carbide milling cutter HPC

GARANT Diabolo 70:
Special solid carbide substrate with extremely high tensile strength combined with **outstanding wear resistance** for optimum process reliability. Newly developed **nano-crystalline high-tech coating for hard milling up to 70 HRC.** Very suitable for **continuous use** in tool and mould making.
Sizes 2 – 5: **Recess angle α = 15°.**

Tolerance:
- Size nominal Ø: **D_c ≤ size 12: 0 / −0.02 mm;**
- Size nominal Ø: **D_c from size 16: 0 / -0.03 mm.**

Application: Due to the **special hard geometry** ideal for use on hardened materials from 60 HRC to 70 HRC.
For profile milling as **finishing.**
(Plunge cutting only to shallow depths.)

Note: For materials > 65 HRC: a_e = 0.02×D.

Solid carbide | WR | e8 | a_e 0.5×D | h6 DIN 6535 HA | HPC | 3 | 4

GARANT Master Alu SlotMachine solid carbide roughing end mill HPC / solid carbide roughing end mill HPC

20 5255 – Improved chip evacuation due to central through-coolant.

20 5265 – For roughing. Special profile for machining non-ferrous metals.

20 5250–5260/5270 – For roughing. Special profile for machining non-ferrous metals.

Advantage:

20 5250/5255/5265 – **Optimised flute form, eccentric relief ground, generous chip spaces.**
Up to 2 × D into solid material at very high feed rates and smooth cutting action.
Ramping capability up to 45°.
Very high feed rates when plunging vertically, thanks to **special plunging geometry**.

Note:

20 5250 – For **HB shanks** use order **no. 205251**.
20 5255 – For **HB** shanks use order **No. 205256**.
20 5265 – For **HB shanks:** use order **no. 205266**.

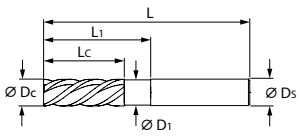
Solid carbide | Standard | WR | 35° | ≠ | ≠ | h6 DIN 6535 HA | G 2.5 | n_{max} | TPC

3 | 4 | 5



Garant GARANT Master Alu SlotMachine solid carbide roughing end mill HPC/TPC, TPC

For roughing.
Special profile for machining non-ferrous metals. Significant reduction in the chip volume due to targeted chip fragmentation using the **special cutter geometry.**

20 5267 – Improved chip evacuation due to central through-coolant.
20 5282 – As a result of the 5 teeth, even higher feed rates are possible. The end face is supported by an additional **stabilising chamfer,** which leads to **smoother operation during helical plunging.**
20 5274/5275 – **Problem-solver** for **TPC machining.** Ideal for automated production as the risk of chip accumulations in the machine is largely prevented.

Note:
HB shanks are available at the same price as HA.
20 5267 – For **HB shanks** use order **no. 205268**.
20 5274 – For **HB shanks** use order **no. 205276**.
h_{max}: The values stated in the table are maximum values. ae_{max} is 0.15 × D for TPC machining.
20 5275 – For **HB shanks** use order **no. 205277**.
h_{max}: The values stated in the table are maximum values. ae_{max} is 0.12 × D for TPC machining.
20 5282 – For **HB shanks:** use order **No. 205283**.
20 5267/5282 – h_{max}: The values stated in the table are maximum values. ae_{max} is 0.2 × D for TPC machining.

Solid carbide | DIN 6527 | NF | e8 | 4 | 40° | a_e 0.5×D | h6 DIN 6535 HB | HPC

Garant GARANT INOX SlotMachine solid carbide roughing end mill HPC

With modified knuckle form profile, optimised flutes and **state-of-the-art high-performance coating.** Exceptionally well suited for roughing machining work on stainless steel materials.
Dimensions similar to DIN 6527.

Advantage: The tool geometry produces particularly tightly rolled swarf that is discharged via flat chip breaker recesses. As a result, the tool maintains an **extremely stable core.**

Recommendation: To ensure reliable working, particularly for full slot milling, use arbors with **4 cooling channel bores**.

Solid carbide | DIN 6527 | HR | d11 | 20° | h6 DIN 6535 HB | HPC | 3 | 4

Garant Solid carbide roughing end mill HPC with internal coolant supply

With internal coolant supply.
The coolant is fed directly **to the cutting** edges.
This gives **longer tool-life** and **complete swarf evacuation.**
This is especially **important when milling slots or pockets**.

Solid carbide | NR | d11 | 5 | 42° | ≠ | h6 DIN 6535 HB | HPC

Garant GARANT Master Steel SlotMachine solid carbide roughing end mill HPC

With a new-type knurled profile, optimised for higher feed rates. Improved cutting edge protection thanks to slight edge honing. Tremendous bending strength due to the use of ultra-fine grain substrate.

20 5551 – With **internal coolant supply** for reliable swarf evacuation.

20 5548–5551 – Feed rate per tooth up to 0.1 mm up to a depth of 2×D (in the slot milled from solid).

Advantage: The tool geometry produces particularly tightly rolled swarf that is discharged via flat chip breaker recesses. As a result, the tool maintains an extremely stable core. Plunge angle of up to 10° possible thanks to generous recess on the front face.

Application: For roughing machining, particularly suitable for full-slot machining.

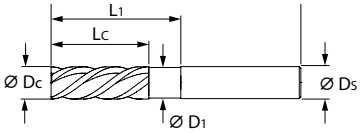
Solid carbide | DIN 6527 | HR | d11 | 45° | a_e 0.5×D | h6 DIN 6535 HB

4 5 6

HOLEX Pro Steel solid carbide roughing end mill HPC / solid carbide roughing end mill MTC



Dimensions similar to DIN 6527.
Optimised special knuckle form profile for roughing.
Very **high metal removal rate.**
Application: For roughing machining, particularly suitable for full-slot machining.

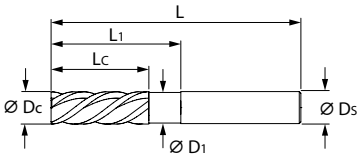
4 5

Garant Solid carbide roughing end mill MTC



Dimensions similar to DIN 6527.
Optimised special knuckle profile for roughing.
Very high rate of metal removal.
Can be used as a **universal end mill.**
Application: Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

Garant Solid carbide micro precision torus cutter

With **advanced DLC sp² coating.** For the **highest demands regarding performance and precision in aluminium materials. Extremely tight tolerances** ensure maximum accuracy.
Double-relief ground with 2 chamfers hollow ground.
Recess angle α = 16°.
Tolerances:

- Corner radius: **R_1 = ±0.0025 mm.**
- Neck ∅: **D_1 = 0 / -0.01 mm.**

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
slots milled from solid: $a_p = 0.25 \times D \times a_{p\,korr}$
side milling: $a_p = 0.50 \times D \times a_{p\,korr}$
copying: $a_p = 0.25 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

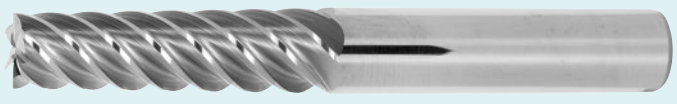
Do you need a tapered die-sinking cutter for your production?

Ask the employees / technical advisers of the Hoffmann Group!
We will be happy to prepare our quotation for you.



Solid carbide | Standard | Type H | 0 −0.005 | 2 | a_e 0.1×D | a_e 0.05×D | h5 DIN 6535 HA

25° ≤0.8 mm | 30° ≥1 mm

Garant GARANT Diabolo solid carbide precision micro torus cutter

GARANT Diabolo:
Special geometry, coating and carbide **for hard machining in the high-performance field.**
Suitable even for machining **electrolytic copper**.
Double-relief ground with 2 chamfers hollow ground for high-precision hard machining.
Recess angle α = 16°.
Tolerances:

- Corner radius: **R_1 = ±0.0025 mm.**
- Neck Ø: **D_1 = 0 / -0.01 mm.**

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
side milling: $a_p = 0.1 \times D \times a_p corr$
copying: $a_p = 0.05 \times D \times a_p corr$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

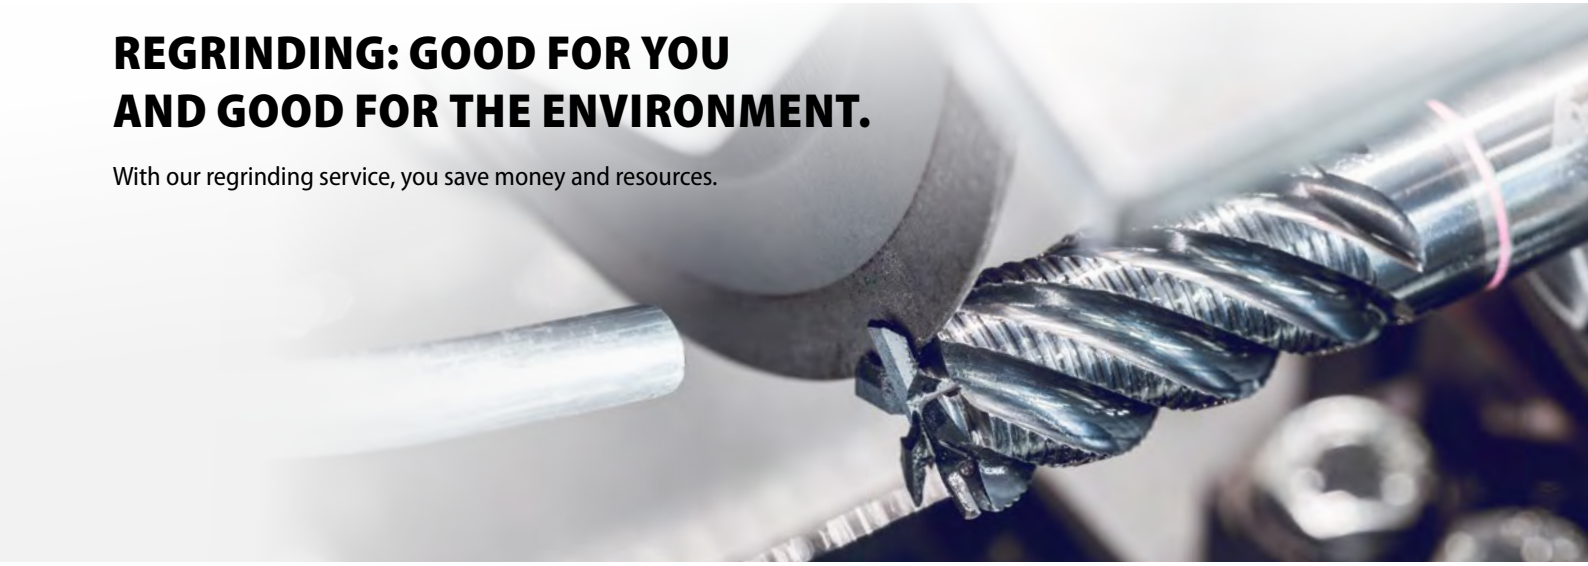
REGRINDING: GOOD FOR YOU AND GOOD FOR THE ENVIRONMENT.

With our regrinding service, you save money and resources.



Hoffmann Group
Regrinding service

Good for you

It is already worth it from the first regrind. Overall, you can expect amazing savings of up to 85%. And all with the original regrind quality, to the original geometry and on the original production machines. There are no compromises here.
In addition: Of course, we also provide you with excellent regrinding results for your third-party brands!

Good for the environment

Reusing the tool saves valuable resources and avoids unnecessary waste. In addition, the shorter transport distances also ensure a reduced CO_2 footprint. A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service.
An all-round worry-free package has never been so easy – and with maximum cost transparency.
For you, this means the highest precision and reliability as quickly as possible.

> "The efficiency and quality of the reconditioned tools due to the original regrind quality surprised me very positively!"
> **Marin Engelsberger, Bacher GmbH**

Further information on the regrinding service:

4 | 6

Garant Solid carbide high feed rate milling cutter HSC

Innovative ultra-fine grain substrate, especially for hard machining up to 70 HRC.
Newly developed high-performance coating for outstanding tool life and optimum metal removal rate.
Tolerance: Corner radius **R1 = +/- 0.01mm**

Application: Especially for high-speed cutting (HSC) in mould and tool making, for copy and traverse milling. Very high machining volume in hard machining.

Note: **Successor product to No. 206273.**

Solid carbide | Standard | Type N | h9 | 15° | h5 DIN 6535 HA | HPC

Garant Solid carbide end torus cutter HPC

Special centre cutting edge geometry for traverse milling at very high feed rates.
Tolerance: Corner radius R_1 = ±0.01 mm.

Application: **For copy and traverse milling** over the full range of hard machining **under HPC/HSC conditions.**
Using special milling strategies **very high rates of metal removal can be achieved.**

Note: **Tools can be reground.**
20 6266 – **Successor product to No. 206272.**
20 6267 – **Successor product to No. 206274.**
20 6262/6263 – With conically increasing recess to guarantee stability at long overhangs.

Garant GARANT Master Steel solid carbide torus cutter HPC

HPC milling cutter with **newly developed high-performance coating.** For **outstanding tool life** and **optimum metal removal rates** in a range of materials.
With **double relief ground side clearance angle.**
Tolerance: Corner radius R_1
Radius size 0.1 mm – 1 mm: **R_1 = ± 0.003 mm.**
Radius size > 1.0 mm: **R_1 = ± 0.005 mm.**

Application: Especially for **high speed machining** in **mould and tool making** for **copy milling.** Excellent results for **dry milling.**

Note:
20 6333 – **Successor product to No. 206280.**
20 6335 – **Successor product to No. 206300.**

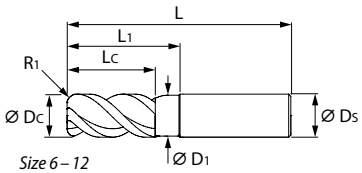
Garant Solid carbide torus cutter HPC



Size 6 – 12

GARANT Diabolo 70:
Special solid carbide substrate with extremely high tensile strength combined with **outstanding wear resistance** for optimum process reliability.
Newly developed **nano-crystalline high-tech coating for hard milling up to 70 HRC.** Very suitable for **continuous use** in tool and mould making.
Sizes 2 – 5: **Recess angle α = 15°.**
Tolerances:
- Corner radius: **R_1 = ±0.01 mm.**

Application: Due to the **special hard geometry** ideal for use on hardened materials from 60 HRC to 70 HRC.

HOLEX Pro INOX M solid carbide torus cutters HPC

Outstanding tool life in its class for machining **corrosion-resistant steels** thanks to **innovative coating and geometry.**
Especially for **stainless steels in the high-performance range,** e.g. duplex.
Optimal metal removal rate due to **high cutting speeds.**
Tolerance: corner radius **R_1 = ±0.005 mm.** Dimensions similar to DIN 6527.

Solid carbide | Standard | Type N | HPC | a_e 0.3×D

GARANT Master INOX / HOLEX Pro INOX solid carbide torus cutter HPC

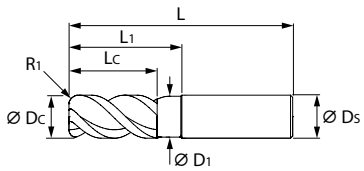
Dimensions similar to DIN 6527.
HPC milling cutter with **newly developed high-performance coating.**
For **outstanding tool life** and **optimum metal removal rate** in a very wide range of stainless steels.

20 6348 – For use at **high cutting speeds**, particularly suitable even for steels up to approx. 1100 N/mm².

20 6345/6347 – Can be used at **high cutting speeds**, particularly suitable even for TOOLOX®.

Advantage:

20 6345/6347 – **Greater oxidation resistance and high-temperature hardness.**



Suitable for/ v_c [m/min]	Alu plastics	Alu	Alu cast > 10 % Si	< 500 N	< 750 N	< 900 N	< 1100 N	< 1400 N	< 55 HRC	< 60 HRC	< 65 HRC	< 67 HRC	< 70 HRC	TOOLOX® 33 HRC	TOOLOX® 44 HRC	INOX < 900 N	INOX > 900 N	Uni

Solid carbide | Type N | HPC

Solid carbide torus cutter HPC

20 6351 – Dimensions to DIN 6527 and 38° flutes.
Tolerance: Corner radius R_1 = **±0.005 mm.**

20 6353 – Dimensions to factory standard and 35° spiral.
Special TiSi coating.
With balancing speed G 2.5.

Note: **NEW GENERATION AVAILABLE!**
20 6351 – **Recommended successor product is No. 206345**
20 6353 – **Recommended successor product is No. 206348**

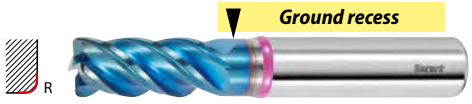
Solid carbide | Type N | HPC

GARANT Master Titan solid carbide torus cutter HPC / GARANT Master Ni-Based solid carbide torus cutter HPC

DIN 6527 | e8 | 4 | 40° | a_e 0.3×D | h6 DIN 6535 HA



20 6364

20 6364 – Tolerance: Corner radius R_1 = ±0.005 mm.

20 6371/6373 – Innovative substrate specially for machining **nickel-based alloys.** Newly developed coating.

Application:

20 6364 – For milling **titanium and titanium alloys;** with very smooth cutting action for optimum tool life and top metal removal rate.

20 6373 – For finishing operations.

20 6371/6373 – For milling **nickel-based alloys with high red hardness.**

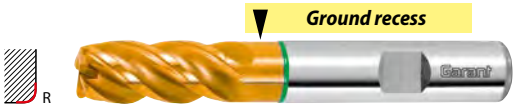
Solid carbide | Standard | Type N | e8 | 4 | 42° | ≠ | a_e 0.3×D | a_e 0.05×D | h6 DIN 6535 HB | HPC

GARANT Master Uni solid carbide torus cutter HPC / HOLEX Pro UNI solid carbide torus cutter HPC

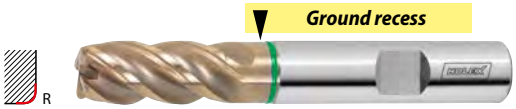
For **roughing and finishing at very high feed rates** with smooth cutting action.
Newly developed geometry and high-performance coating for outstanding production results and very long tool life with a variety of materials.
Unequal spacing gives **high intrinsic stability** and smooth cutting action.
Tolerance: corner radius **R_1 = ±0.005 mm.**
Dimensions similar to **DIN 6527.**

Advantage:

20 6367 –
- Particularly low vibration running.
- Special flute profile, large flutes.
- Specially matched edge honing.
- Optimised substrate for hardness and toughness.



20 6367



20 6368

Solid carbide | Type H | e8 | a_e 0.05×D | a_e 0.05×D | h6 DIN 6535 HA | HPC

6 | 8 | 10

Garant GARANT Diabolo solid carbide torus cutter HRC 62 / GARANT Diabolo solid carbide torus cutter HPC

GARANT Diabolo:
Special geometry, coating and carbide for hard machining.
Tolerance: Corner radius R_1 = **±0.005 mm.**

20 6421/6372 – Without dynamic twist pitch.
20 6372 – Dimensions according to factory standard and 50° helix. Double relief ground side clearance angle.
20 6421 – Dimensions according to factory standard and 50° helix. Double relief ground side clearance angle.
20 6422/6442 – Tolerance: Corner radius **RS_1 = ± 0.005 mm.**

Application:
20 6422/6442 – **For peripheral milling** as a **finishing operation** (plunge milling only to shallow depths).

25° 30°
≤ 0.8 mm ≥ 1 mm

Garant Solid carbide micro precision copy slot drill

With **advanced DLC sp² coating.** For the **highest demands regarding performance and precision in aluminium materials. Extremely tight tolerances** ensure maximum accuracy. Double-relief ground with 2 chamfers.

Tolerances:

- Corner radius: **Radius contour = 0 / -0.005 mm.**
- Neck ∅: **D_1 = 0 / -0.01 mm.**

20 7023 – Recess angle α = 16°.
20 7025 – Recess angle α = 16°.
Extra-sturdy shank to reduce the tendency to vibrate.

Note: At greater tool overhang lengths, use a reduced value for a_p!
values for:
copying: $a_p = 0.25 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

GARANT Diabolo solid carbide ball nose slot drill HRC 62 / GARANT solid carbide ball nose slot drill HPC / GARANT Diabolo solid carbide high-precision ball nose slot drill

GARANT Diabolo:
Special geometry, coating and carbide for hard machining.
Tolerance: Radius contour = **±0.005 mm.**

20 7341 – **Specialist for steels up to 62 HRC.** Reliable process and longer service life thanks to optimised cutter geometry and state-of-the-art high-performance coating.

20 7347 – **Solid carbide high precision ball nose slot drill** with **radius Ø and contour variations within the µm range.**

Garant GARANT Diabolo solid carbide precision micro copy slot drill

GARANT Diabolo:
Special geometry, coating and carbide **for hard machining in the high-performance field.**
Suitable even for **machining electrolytic copper.**
Tolerances:

- Corner radius: **Radius contour = 0 / -0.005 mm.**
- Neck ∅: **D_1 = 0 / -0.01 mm.**

20 7373 – Recess angle α = 16°.
20 7377 – Recess angle α = 16°.
Extra-sturdy shank for achieving longer tool life.

Note: At greater tool overhang lengths, use a reduced value for a_p!
values for:
copying: $a_p = 0.05 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

Solid carbide | Standard | Type N | f8 | 2 | 28° | a_e 0.5×D | a_e 0.03×D | h6 DIN 6535 HA | HPC

Garant GARANT Master Steel solid carbide ball nose milling cutter HPC

Precision ground for very high accuracy requirements.
Tolerance: Radius contour = **±0.005 mm.**
Improved cutting edge protection thanks to slight edge honing.
Tremendous bending strength due to the use of ultra-fine grain substrate.

Solid carbide | DIN 6527 | Type N | f8 | 4 | 45° | a_e 0.3×D | a_e 0.03×D | h6 DIN 6535 HA | MTC

Garant Solid carbide ball nose end mill MTC

Ball nose slot drills with corrected cutting form, without profile distortion.
With double relief ground side clearance angle.
Tolerance: Radius contour = **±0.005 mm.**

Application: Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres.

Note:
20 7450 – **NEW GENERATION AVAILABLE!**
Recommended successor product is No. 207490.
20 7460 – **NEW GENERATION AVAILABLE!**

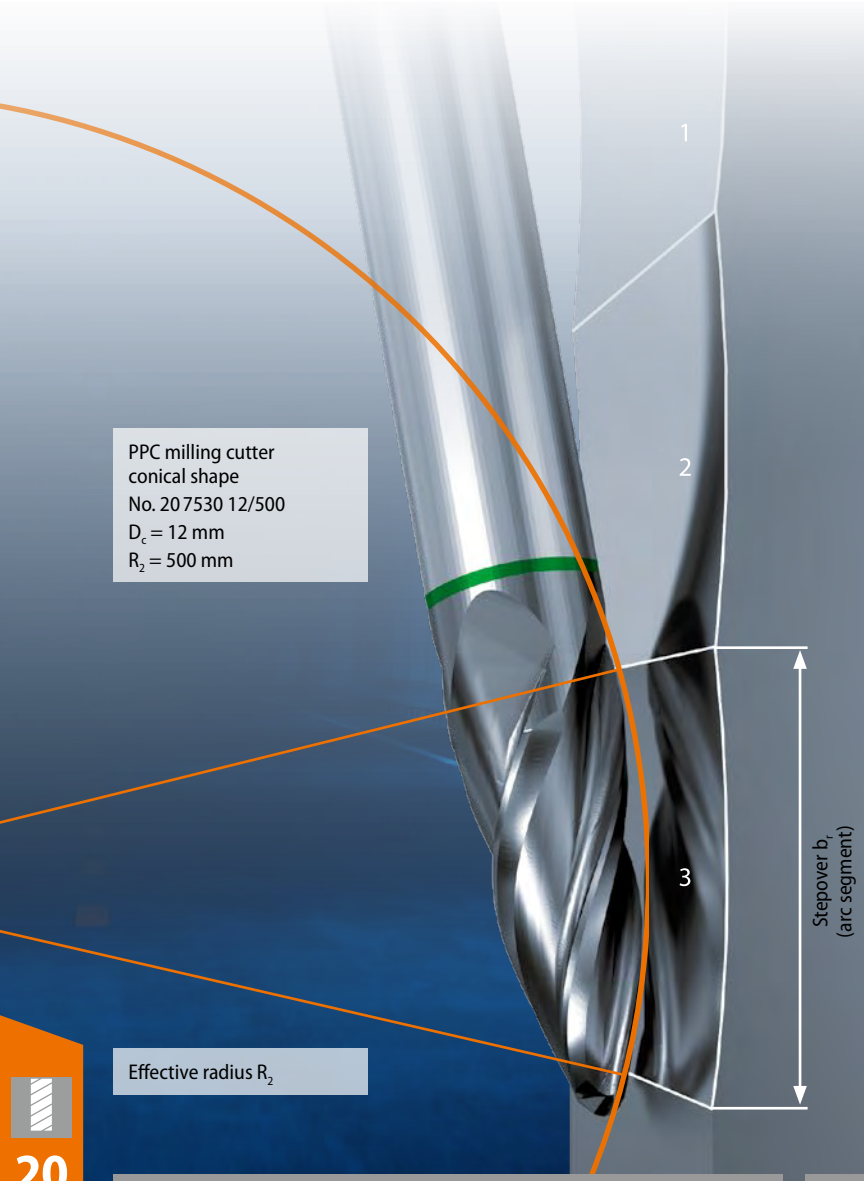
Garant **PPC – Parabolic Performance Cutting**

Dynamic 5-axis milling.

Reduce process times and increase surface quality.



PPC milling cutter
conical shape
No. 20 7530 12/500
D_c = 12 mm
R_2 = 500 mm

Effective radius R_2

PPC

Advantages of the PPC process:

- Shorter machining times due to the large stepover.
- Lower set-up costs.
- Higher surface qualities at shorter cycle times.
- Outstanding process reliability.
- Extreme wear resistance.
- Increased productivity.

The right tool
for every application

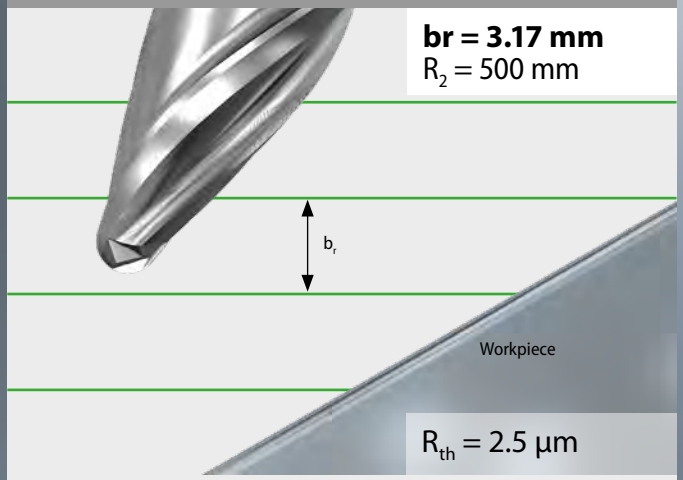
R_{th} = 2.5 µm

$$b_r = 2 \times \sqrt{R_{th}(2 \times r - R_{th})}$$

$$b_r = 2 \times \sqrt{\frac{2{,}5\ \mu m}{1000}(2 \times 6\ mm - \frac{2{,}5\ \mu m}{1000})} = 0{,}35\ mm$$

Barrel milling cutter, conical form



br = 3.17 mm
R_2 = 500 mm

R_{th} = 2.5 µm

$$b_r = 2 \times \sqrt{R_{th}(2 \times R_2 - R_{th})}$$

$$b_r = 2 \times \sqrt{\frac{2{,}5\ \mu m}{1000}(2 \times 500\ mm - \frac{2{,}5\ \mu m}{1000})} = 3{,}17\ mm$$

Solid carbide | Standard | Type N | f8 | 30° | a_e 0.05×D | a_e 0.05×D | h6 DIN 6535 HA | PPC

Garant Solid carbide barrel milling cutter, PPC

High-performance tool for **exceptionally efficient finish machining of free-form surfaces.**
For outstanding surface qualities in a **very short machining time.**
For use on modern 5-axis milling machines with CAD / CAM support.
Recommendation: We recommend 0.05 to 0.2mm as an allowance for finishing operations.

Note: R_2 represents the effective radius on the tool.
Cannot be reground!

Solid carbide barrel milling cutter, tangential form

The end face geometry is designed so that the chips, especially those formed by the end radius, are of optimum shape and have optimum evacuation characteristics. For this purpose the number of cutting edges is reduced to the number of effective end face cutting edges.

20 7523 – Innovative coating concept for **machining hardened materials.**

Note:

Solid carbide | Standard | Type N | ±0.04 | 3 | h6 DIN 6535 HA

Garant Solid carbide micro Woodruff keyseating cutter

Particularly suitable for slot milling and circular milling in holes. With optimised coating for universal application in virtually all materials.
Tolerance, nominal diameter D_c = +/- 0.04 mm.
Tolerance, cutter length L_c = +/- 0.02 mm.
Size 5,8×0,5–5,8×1,5 – Minimum hole diameter is 6 mm.
Size 7,8×0,7–7,8×2,0 – Minimum hole diameter is 8 mm.

Note: Always use climb milling. Engage loop of 180° to achieve the full depth of cut. Make sure the depth of the slot is linear.
ae_{max} = 0.1×D.

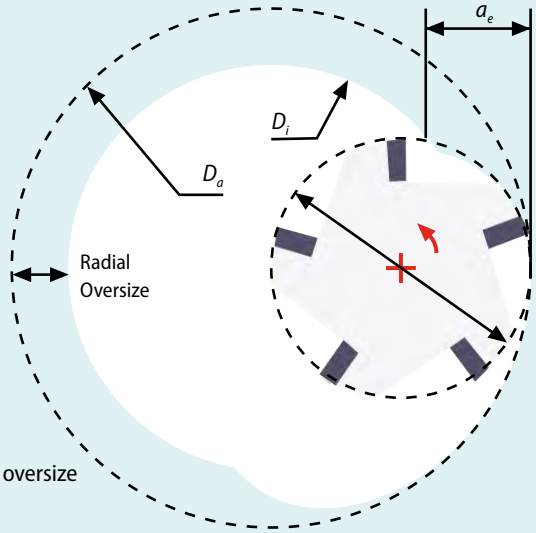
Garant Application instructions for solid carbide micro Woodruff keyseating cutters

Due to the unfavourable contact ratio of milling cutter (D_c) to hole, particularly in the case of small hole diameters, please note the following:

- Always use climb milling.
- Use engage loop of 180° to achieve the full depth of cut.
- Make sure the depth of the slot is linear.



a_e > radial oversize

$$a_e = \frac{D_a^2 - D_i^2}{4\,(D_i - D_{wz})}$$

a_e cutting width
radial cutting depth [mm]
D_a external (enlarged)
diameter [mm]
D_i internal (existing)

D_{wz} milling tool diameter [mm]

Solid carbide | DIN 850 D/F | e8 | h6 DIN 6535 HB | Type N | Type NF | 6 | 8 | 10

Garant Solid carbide high performance Woodruff keyseating cutter

With new high-performance coating for very long tool life. Peripheral cutting, alternate set teeth (staggered). The sides of the teeth are ground to give clearance
Size 38,5×10; 45,5×10 – With chip separators – type NF.

Note: Suitable for milling Woodruff keyways to DIN 6888.
f_z for $a_p = 0.1 \times D$.
Successor product to No. 208025.

Garant Solid carbide deburrer, spiral flutes

For aluminium and plastics

Deburrer with **polished flutes** and **sharp cutting edges** especially for machining aluminium and plastic.
Tolerance: **Dimension S = +/- 0.2 mm.**
Point angle = +/- 5 arc minutes.
Outstanding surface qualities thanks to the 35° **helix angle.**
Size 6M; 10M; 12M – Extra-long deburrers for outstanding deburring results on particularly difficult-to-access contours. Tools without tip.

Application: Perfectly suitable for **chamfering** and **deburring** component edges and for **contouring applications**.

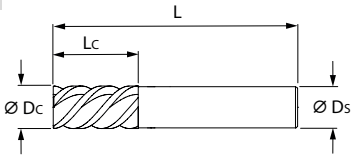
Solid carbide | Standard | h10 | a_e 0.5×D | h6 DIN 6535 HA

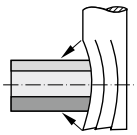
Garant Solid carbide milling cutter for GRP, CRP, and graphite

Twisted and curved cutting edges, which enable **burr-free milling** of both the upper and lower edges of fibre-reinforced composites.
Delamination is prevented because the cutter performs a cut which is simultaneously dragging and compacting. The cutter must be positioned centrally to the cross section of the material.



20 9515

Workpiece centre



The helical curved flute profile prevents delamination and permits burr-free milling.

20 9517

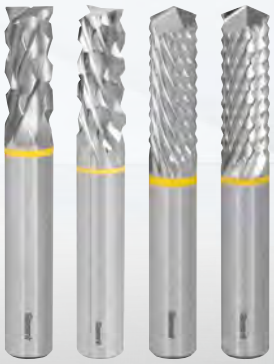
GARANT COMPOSITE SOLID CARBIDE MILLING CUTTERS.

The highest performance for composite materials.

Compared to GARANT router tools, our GARANT composite solid carbide milling cutters are especially designed for the machining of composite materials and offer a longer tool life and higher metal removal rate.

GARANT router tools



20 9410 / 20 9420 / 20 9415 / 20 9435

GARANT Composite solid carbide milling cutter

+100%

- Tool life **plus 100 %**.
- **Extremely improved** smooth running.
- **4x higher** cutting quality.

Uncoated

20 9542 **20 9540**

+100%

- Tool life **plus 100 %**.
- **Increased** smooth running.
- **Twice the** cutting quality.

Diamond-coated

20 9548 **20 9546**

The further development of the GARANT composite cutters guarantees clear advantages:

+30 %

Increased productivity

- Problem-solver in unfavourable process conditions.
- Extreme cutting edge sharpness for excellent cutting quality.

Optimum cutting edge quality

- 40 %

Reduced axial forces

- Process conditions, ideal for use in hard-to-machine outer layers.
- Increased layer thickness for maximum tool lives.

Very high productivity

Solid carbide | DIN 6527 | h10 | 8 | 8° | h6 DIN 6535 HA

Garant Solid carbide milling cutter Composite

Specifically **developed Tool cutting edge has been specifically developed further** for optimum machining of composite materials.
Length similar to **DIN 6527 long.**

20 9540/9546 – Right-hand helix, **dragging cut** for standard applications.
20 9542/9548 – Left-hand helix, **compacting cut.** The material is pushed down on to the substrate. Highly suitable for thin materials.

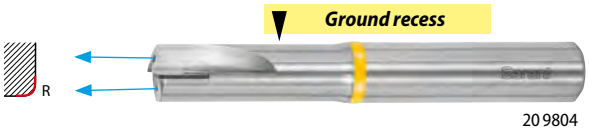
Garant PCD torus cutter with internal cooling

High performance PCD slot drill for **high metal removal rates.**
Straight flutes for a neutral cut.
Tolerance for corner radius R_1 = **±0.01 mm.**



Improved version!

Garant PCD milling cutter with internal cooling

High-performance PCD milling cutter designed for **high-volume machining. High rigidity** due to conical design. Very well suited for structural components made of aluminium. Axial angle approx. 10° positive.

Size 16 – Taper transition with 2.2° (angle α).
Size 20 – Taper transition with 1.5° (angle α).

Garant PCD face mill

High-performance PCD face mill for **roughing and finish machining. Generous flutes** for reliable evacuation of the chips. Coolant directly on the cutting edge. Axial angle 6° positive.

Supplied with: Special fastening screw for optimal coolant feed.

Note: Matching face mill arbors are located in the clamping device area, e.g. No. 306530 22. PCD face mill with corner radius 0.1 mm – 1.5 mm are available on request.

Garant Solid carbide micro precision slot drill for CRP, GRP and graphite

With **crystalline diamond sp³ coating.** For the **highest demands regarding performance and precision in** fibre-reinforced composites, CRP, GRP, and graphite. **Extremely tight tolerances** ensure maximum accuracy. Double relief ground with 2 hollow-ground chamfers. **Recess angle α = 16°.**

Tolerances:

- Neck Ø: **D_1 = 0 / -0.01 mm.**

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
slots milled from solid: $a_p = 0.1 \times D \times a_{p\,korr}$
side milling: $a_p = 0.2 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

90°

Garant

Solid carbide micro precision torus cutter for CRP, GRP and graphite

With **crystalline diamond sp³ coating**. For the **highest demands regarding performance and precision** in fibre-reinforced composites, CRP, GRP, and graphite. **Extremely tight tolerances** ensure maximum accuracy. Double relief ground with 2 hollow-ground chamfers.
Recess angle α = 16°.

Tolerances:

- Corner radius: **R_1 = ±0.0025 mm**
- Neck Ø: **D_1 = 0 / -0.01 mm**

Note: At greater tool overhang lengths, use a reduced value for a_p!
Values for:
copying: $a_p = 0.10 \times D \times a_{p\,korr}$
side milling: $a_p = 0.20 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

Solid carbide micro precision copy slot drill for CRP, GRP and graphite

With **crystalline diamond sp³ coating.**
For the **highest demands regarding performance and precision in** fibre-reinforced composites, CRP, GRP, and graphite. **Extremely tight tolerances** ensure maximum accuracy. Double relief ground with 2 hollow-ground chamfers. **Recess angle α = 16°.**
Tolerances:

- Corner radius: **Radius contour 0 /-0.005 mm.**
- Neck ∅: **D_1 = 0 / -0.01 mm.**

Note: At greater tool overhang lengths, use a reduced value for a_p!
values for:
copying: $a_p = 0.15 \times D \times a_{p\,korr}$
To calculate the feed rate vf please use the actual speed of the machine (the maximum possible speed)!
e.g: vf = 18000 [rpm]× fz [mm/Z]× z

HAIMER DUO-LOCK®

Interchangeable head system

can be found on pages 675 – 679.

The advantages at a glance!

Maximum concentricity and length repetition accuracy due to the modular interface with double taper on a wide variety of carbide tool heads. Unsurpassed productivity and stability due to a protected unique thread design and third support area. Process reliability without loss of performance due to the finest, virtually unbreakable carbide grade.

Superior riigidity of the interface which allows up to 1 × D cutting depth for slot milling and 3 × D cutting depth for side milling.

With the 3 precise mating faces of the interfaces, the Duo-Lock® has become established as the most accurate and most stable interchangeable head system.

The double cone contact surfaces in combination with the third support surface in the rear area result in high rigidity and precision.

Conclusion

Quick and precise changing of the Duo-Lock® milling heads:

- Saves time.
- Saves material as the shank remains in place.
- Higher metal removal rate with very high process reliability.

220334 220327

220376 220353

Furthermore:

Also increase safety with HAIMER Safe-Lock®. The innovative shank shape can also be used on the Duo-Lock® extensions. This ensures consistent pull-out protection for reliable load capacity.

Highly wear-resistant grade for machining unalloyed tool steels and high-tensile materials up to 56 HRC		HB4015					HB4015				HB4015										
Suitable for machining low-tensile steels. PVD coated.		HB4020																			
Outstandingly suitable for high-alloy tool steels. Ultra-fine grain grade with multi-layer coating.			HB4030																		
Extremely wear-resistant grade with AlTiCrN coating for hard machining.										HB4715								HB4715			
Tool material with AlTiCrN multi-layer PVD coating, developed for use on stainless steels.								HB4130													
High-performance tool material for machining Inconel and heat resistant superalloys (HRSA). Multi-layer PVD coating.																HB4420					
Tool material for machining titanium. Multi-layer PVD coating.																HB4430					
Wide-range grade. General-purpose tool material.		HB415				HB415															
Highly wear-resistant grade for hard machining up to 60 HRC. TiC / TiN-CVD multi-layer coating.	HB7505									HB7505								HB7505			
Wear-resistant grade for high-speed machining in steel.	HB7510 HB7510																				
Grades update for grade HB 7510.	HB7510-1																				NEW
Machining of heat-treatable and tool steels, and also cast iron. Ti(C, N)+Al_2O_3.		HB7515									HB7515										
Micro-grain grade with TiC / TiN and nano-layer coating.		HB7520 HB7520				HB7520 HB7520															
Grades update for grade HB 7520.		HB7520-1				HB7520-1															NEW
Grade for wet and dry machining and high cutting speeds. TiC / TiN-CVD multi-layer coating or Ti(C, N)+Al_2O_3 coating. For NC spotting drills with TiCN coating.		HB7525 HB7525 HB7525				HB7525 HB7525 HB7525															
Wide-range grade for machining steel. Especially suitable for low tensile strength steels. Tough substrate means low susceptibility to fracture.			HB7530																		
Ideal for use in difficult conditions and on stainless steels. (P30/40) (M20/35) micro–grain grade with TiAlN/TiN–PVD multi–layer coating.			HB7535 HB7535				HB7535 HB7535									HB7535 HB7535					
Highly wear-resistant grade for machining hardened materials. PVD coated.	HB7605									HB7605								HB7605			
Special grade for stainless steels.						HB7625															
Micro-crystalline grade with balanced basic toughness and nano-layer coating.							HB7630														
Tough carbide with CVD multi-layer coating especially for stainless steels. For 45° chamfer mills, with PVD coating.								HB7635 HB7635													
Highly wear-resistant grade for hard machining up to 60 HRC. TiC / TiN-CVD multi-layer coating.										HB7705								HB7705			
Wear-resistant grade for machining cast iron. (P10) (K10/20) carbide with TiAlN-CVD coating.	HB7710										HB7710										
Wear-resistant grade for high alloy tool steels, cast iron, and nickel alloys.		HB7720									HB7720										
(P20/30) (K20/30) Grades for high cutting speeds. Ideal for dry machining. Specially suited for hard machining, mounted on TopCut indexable face mills.			HB7730									HB7730									
Grades update for grade HB 7730.			HB7730-1									HB7730-1									NEW
Machining of low tensile strength materials. (P30/40) (M20) carbide with TiAlN-CVD coating.				HB7735			HB7735									HB7735					
Specially for machining aluminium at high cutting speeds.														HB7805							
Nano-crystalline high performance coating for aluminium, aluminium alloys and composite materials. Some are diamond-coated.														HB7810							
Grades update for grade HB 7810.														HB7810-1							NEW
PVD multi-layer coating based on AlTiCrBN. For finishing, semi-roughing and roughing machining.			HB7830-1					HB7830-1													NEW
PVD-coated carbide substrate for general-purpose machining.			HB7835					HB7835													
Wear-resistant grade for machining titanium and cast iron.												HB7930				HB7930					
Grades update for grade HB 7930.												HB7930-1				HB7930-1					NEW
Micro-grain grade with high toughness. Suitable for machining stainless steels and materials that are difficult to machine.																HB7935					
Exceptionally wear-resistant grade, PVD-coated.																HB7940					
Micro-crystalline carbide with multi-layer coating for wet machining of stainless steels.							HB8630														
Wear-resistant PVD-coated tool material grade for machining steels.			HB9520

KYOCERA																					
Carbide coated	**Megacoat**-NanoEX. 1st choice for cast materials.											PR1810						PR1810			
	Megacoat coating (PVD) on a fine-grain substrate. For general-purpose applications in steel and stainless steels.		PR1225					PR1225													
	Megacoat-NanoEX. 1st choice for steel.		PR1825					PR1825													
	Megacoat multilayer coating (PVD) and substrate for machining cast iron.											PR1510						PR1510			
	Megacoat multi-layer coating (PVD) on a fine-grain substrate. First choice for general-purpose applications in steel and stainless steels.		PR1525					PR1525													
	Megacoat multilayer coating (PVD) on a fine-grain substrate. For stainless steels and titanium alloys.								PR1535									PR1535			
	Megacoat-NanoEX. 1st choice for stainless materials.								PR1835									PR1835			
	α-Al_2O_3coating CCRD, as first choice for Ni-based heat resistant alloys and martensitic stainless steels.								CA6535									CA6535			
	CVD-coated substrate of very high toughness for high protection against wear when machining cast iron.												CA420M								
Carbide uncoated	Uncoated wear-resistant micro-grain grade for machining aluminium. High hardness and toughness.															GW25					
Cermet	Tough Cermet with high resistance to oxidation and thermal shock. For productive applications in steel.	TN100M						TN100M													
Ceramic	Ceramic grade for high cutting speeds.											CS7050									
	Ceramic grade for the highest cutting speeds.											KS6050									
mimatic																					
Car-bide	Wear-resistant micro-grain carbide with Tinamatic coating.		TiAlN					TiAlN					TiAlN			TiAlN					
HOLEX																					
Carbide coated	Optimised wide-range grade for machining steel. CVD coating.		HBM015																		
	Special carbide grade for machining stainless steels. Ideal for use under difficult machine conditions.							HBM130													
	Coated carbide grade for general-purpose use.		HBM020					HBM020					HBM020								
	General-purpose CVD-coated multi-range grade.		HBM20					HBM20													
	PVD-coated multi-range grade for a wide range of applications.			HBM025				HBM025										HBM025			
Carbide uncoated	Uncoated highly wear-resistant tool material type for machining non-ferrous metals.															HUM310

Garant Aluminium shoulder mill for ZDHT 1505

High-performance milling system for high cutting speeds. Absolutely precise insert bedding. Exceptional torsional stiffness thanks to optimised protection against centrifugal force.

Attention: Before using the indexable insert No. 211776 ALU (r = 5.0 mm) and 211777 ALU (r = 6.0 mm), the insert seats of the carrier must be modified.

Note: The **recommended torque** for fastening the insert screws No. 219878 4 and 219878 5 is **3.2 Nm.**

Garant Indexable milling inserts ZDHT1505.. for aluminium shoulder mill No. 211755 – 211759

Indexable inserts ground all round for a precise fit in the tool body. High-performance micro-grain substrate from the latest generation of tool materials. Optimised preparation of cutting edges for use in materials that are easy to machine.

Note:
21 1776/1777 – A carrier modification (insert seats) is required before use.
