VERSATILE ALUMINIUM SHOULDER MILL.

The aluminium shoulder mill can also be used for machining plastics and aluminium composite materials.
We have the answer to your machining requirements.

Just contact us!

Our ToolScout is easy to use – for intelligent tool selection and to determine technological data:

HPC | POWER CARD Garant

Garant Precision finishing mills for CPHX0602.. / CPHX09T3..

Precision finish milling for **extremely efficient en pre-finish machining and finish machining.**
Due to the revised wiper geometry, suitable for **outstanding surface quality** in **ground finish standard**.
Extreme time saving available due to a **large line skip** and a **high feed rate per tooth**.
Application: Typical tool for tool and die manufacturing.

Precision finishing mills for CPHX0602..

Note: GARANT torque screwdriver TQ No. **211750 size 1.0** with bit No. **674252 size 7IP**.

Garant Milling inserts for precision finishing mills No. 212534 /212538 /212542

- Inserts with improved wiper geometry for **more efficient machine processes in tool and die manufacture.**
- Extreme **time saving** available due to large stepover and high feed rate per tooth.
- Milling inserts with **radial** and **axial** wiper geometry.

Concentricity ± 0.020 mm.

Recommendation: For pure face milling operations, reduce Vc by 30%.

Note: Standard application values for ae 0.2 mm.
L_{wa} represents the axial wiper length.
L_{wr} represents the radial wiper length.

POWER CARD Garant

Garant Precision copy mill

Exactly accurate insert bedding due to optimised design of insert and insert seat tolerances.
Highest interchange accuracy guaranteed: ± 0.015 mm.

Size 8 – Without through–coolant feed.
21 2620 – Without through–coolant feed.

Application: General use for finishing and semi-finishing operations.
21 2590/2592 – **Solid carbide –** for large depths of cut and to minimise vibration.
21 2601–2620 – **Steel –** for general use in machining drop-forgings, and in tool and mould making.

Note: Calculate the speed based on the effective Ø D_w.
Size 8 – Use GARANT torque screwdriver TQ No. **211750 size 0.9** with bit No. **674252 size 7IP**.
Size 10 – Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 8IP**.

HPC POWER CARD Garant

Garant GARANT Power Q Mini high feed rate indexable milling cutter for ANGX10T308

High feed rate milling system for **smaller machining diameters** and **greater operating depths.** Particularly **effective due to the large number of cutting edges.**

Spare part: Pack of insert screws No. 269028 18 (7IP; 1.2Nm).

Note: Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 7IP**.

21 3056 – When working with extensions, always use internal cooling.

HPC POWER CARD Garant

GARANT Power Q Double high feed rate indexable milling cutter for XOMU094812 I XOMU146715

Tool system with **extremely stable embedding for the inserts** for **working to high process reliability.**
Tool geometries to reduce the cutting forces contribute significantly to **reducing the load on the headstock**.

GARANT Power Q Double high feed rate indexable milling cutter for XOMU094812

Spare part: Pack of insert screws No. 219799 7 (10IP; 2.8Nm).

Note: Use GARANT torque screwdriver TQ No. **211750 size 2.8** with bit No. **674252 size 10IP**.
21 3004 – When working with extensions, always use internal cooling.

HPC POWER CARD Garant

Garant Feedking high feed rate indexable milling cutter HPC for XD.. 070308 / 09T308 / 120408

Dynamic cutting edge geometry for highest feed rates. Extremely smooth cutting due to **self-stabilising insert bedding.**
Optimised geometry for reduced cutting forces, thereby reducing the stress on the main spindle.
Advantage: Particularly cost-effective due to **exceptionally sturdy 4-edge** inserts.

Note:
21 2905 – When working with extensions, always use internal cooling.

Feedking high feed rate indexable milling cutter for XD.. 070308

Note: Use GARANT torque screwdriver TQ No. **211750 size 2.2** with bit No. **674252 size 9IP**.

POWER CARD Garant

Garant Hi5 high feed rate indexable face mills for milling inserts POMX 10T5..

Description: Powerful and smooth-cutting high feed rate indexable face mill.
Particularly smooth-running, due to unequal spacing of the teeth.
Can also be used for semi-finishing.
Cost-efficiency due to 5-edge inserts.

Note: Use GARANT torque screwdriver TQ No. **211750 size 5.7** with bit No. **674252 size 20IP**.

Garant Milling inserts for Hi5 high feed rate indexable face mill No. 213110

Sturdy insert version (thickness = 5.9 mm).
Positive geometry for high feed rates.
Flat cutting edge length: 2 mm for high surface quality.
Special cost-effectiveness due to 5 cutting edges.
21 3184/3193 – Preferred solution for difficult applications (interrupted cutting).

Note: Standard application values for a_e = 0.5 ... 1×D / a_p max = 2.2 mm.

43° POWER CARD Garant

Garant Indexable face mill 43° Octo for milling inserts OF.. 050405

43° indexable face mill with up to 8 edges per milling insert.

Application: Very good surface finishes are obtained due to the positive geometry. Smooth-cutting face mills.

Note: To use all **8 cutting edges**, the insert **always has to be turned in the indicated direction.**
Standard application values for a_e = 0.5 ... 1×D.
$a_{p\,max}$ 2.2 mm: **(Z = 8),**
$a_{p\,max}$ 3.5 mm: **(Z = 7).**
Use GARANT torque screwdriver TQ No. **211750 size 3.8** with bit No. **674252 size 15IP**.

Garant Milling inserts ON.U, SN.U and XNEU for TwinCut indexable face mills No. 213410 - 213420

21 3424–3438 – Double-sided with 2×8 cutting edges.
21 3440/3468/3470 – Wiper edge insert with 1 cutting edge.
21 3444–3466 – Double-sided with 2×4 cutting edges.

Recommendation: For the best surface quality choose insert tolerance E in combination with wiper edge insert(s).

Note: Standard application values for $a_e = 0.5 \ldots 1 \times D$ / $a_{p\,max}$
21 3440 – Length of the flat chamfer 7.6 mm.
21 3468/3470 – Length of the wiper flat 8 mm.

Milling inserts

21 4540 – With additional wide smooth flat chamfer.
21 4525/4531 – Precision ground carbide indexable inserts, ideal for machining thin-walled aluminium material.
21 4543/4545 – Precision-ground carbide indexable insert for high surface qualities when face milling.

Application:

21 4540 – For high cutting speeds and high surface quality. Preferably for use in adjustable insert seatings. Different types of inserts can be mixed.
21 4543/4547 – For surfaces with roughness less than R_z 3 µm. Only for dry machining.

Note:
21 4525/4531 – Standard application values for $a_e = 1 \times D$ / $a_p = 5$ mm, $a_{p\,max} = 10$ mm.
21 4540–4547 – Standard application values for $a_e = 1 \times D$ / $a_p = 3$ mm, $a_{p\,max} = 5$ mm.

90° POWER CARD Garant

Garant GARANT Softcut® HSI for milling inserts SO.T 0836.. and XOEW

Wear-resistant heat-treated steel with corrosion-inhibiting coating. Precise indexable insert seating by use of appropriate torque. Wide and close tooth pitches for individual milling strategies.

Application: Particularly suitable for machines with lower drive power and for machining at greater depths and small entry diameters.

Note: **For exact 90° corners, select a_p = 6 mm.**
To use all **4 cutting edges**, the insert must **always be turned in the direction shown (anticlockwise).**
Use GARANT torque screwdriver TQ No. **211750 size 2.2** with bit No. **674252 size 8IP**.

Indexable face / shoulder mill 90° for indexable inserts SOMT 09T304

Made of hardened special steel for low vibration and long life. Very good surface finishes are obtained due to projecting flat cutting edge.

Attention:

21 5055 – Without a PowerCard!

Note: To use all **4 cutting edges**, the insert **always has to be turned in the indicated direction.**
Use GARANT torque screwdriver TQ No. **211750 size 2.2** with bit No. **674252 size 9IP**.

21 5055

Milling inserts SOMT 09T304 for indexable face / shoulder mills No. 215045 / 215050 / 215055

Extremely **strong inserts** to the standard ISO dimensions, precision sintered and ground. High strength and wear resistance due to micro-grain structure.

Note: Standard application values for $a_e = 0.3 \times D$ / $a_{p\,max} = 5$ mm.

Shoulder mill 90° for inserts XNEX0806..

Robust shoulder milling cutter. Insert seats enclose the inserts on several sides for stable machining conditions.
For use in combination with indexable insert 215117 UNI as a **high feed rate indexable face mill**.

Application: With double-sided 3-edge inserts XNEX0806.. or single-sided 3-edge inserts XNEX0806.. **High feed rate.**

Note: GARANT torque screwdriver TQ No. **211750 size 3.8** with bit No. **674252 size 15IP**.

GARANT Power Tang 90° tangential high-performance shoulder mill for LO.U0904...

Single-row

Maximum stability due to tangentially arranged inserts.
High feed rate values for maximum metal removal rate due to optimum indexable insert with stability in the direction of the cutting force.

Note: Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 8IP**.

MTC POWER CARD Garant

GARANT Softcut® high-performance indexable chamfer mill for AP.T 1805..

Robust plug-in chamfer mill. Insert seat enclosed on several sides for stabilisation of the cutters and to take up the vertical and radial forces.

Application: For wide chamfers in steel fabrications.
Outstandingly suitable for roughing and semi-roughing applications.

Note: Stepless surfaces are achieved.
Use GARANT torque screwdriver TQ No. **211750 size 3.8** with bit No. **674252 size 15IP**.

Other configurations on request

90° MTC POWER CARD Garant

GARANT Softcut® high-performance indexable shoulder mill 90° MTC for indexable inserts AP.T 1805..

High precision square shoulder milling cutter with irregular pitch for very smooth cutting, very high precision and cutting power. High performance indexable square shoulder milling cutter **with special geometry for reduced cutting forces for MTC applications** under **unstable conditions** or **for spindles with low drive power.**

Application: For face milling to large depths, also slotting.
General use in all steels including stainless steels.
Especially for **MTC (Multi Task Cutting)** use on the new generation of turning / milling centres **(MTM).**

Note: The insert pocket must be modified when using indexable inserts with a radius greater than 3.1 mm.
Use GARANT torque screwdriver TQ No. **211750 size 3.8** with bit No. **674252 size 15IP**.

Garant GARANT SOFTCUT® 90° HIGH-PERFORMANCE SHOULDER MILL.

Marking indicating suitability for heavy-duty cutting.

Reliable and profitable

- Very good perpendicularity for shoulder cuts.
- Impressive surface quality.
- Suitable for circular interpolation milling, plunging, ramping.
- Optimised chip breaker geometry for machining tempered steels (21 5444 – 21 5453 ST1400).
- Highly positive surface geometry for a soft cut in all materials.
- First-rate innovative tool materials and coatings.

Application example

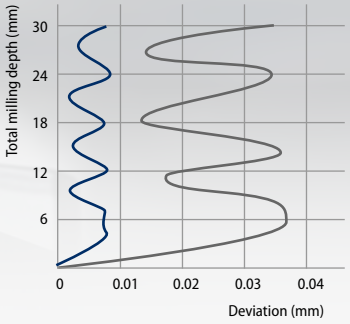
SIDE MILLING a workpiece, material C45

Technology data:

- v_c = 160 m/min
- f_z = 0.15 mm
- a_p = 6 mm
- a_e = 3 mm
- Tool: GARANT Softcut® 90° shoulder mill 21 5411 50/7
- Insert: GARANT Softcut® 90° 21 5438 ST900

90° accuracy – comparison

Test result with a_p = 6 mm (shoulder height 30 mm)

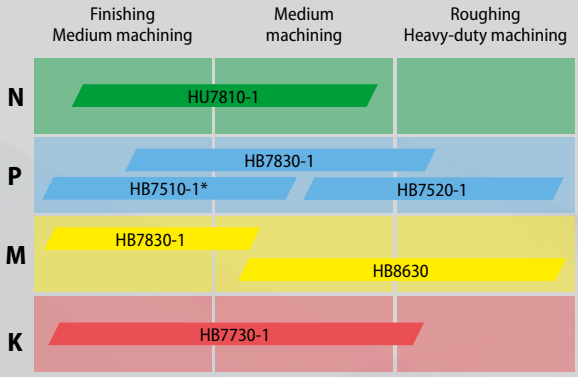


GARANT Softcut® 90° 21 5438 ST900
Step joint offset of less than 0.01 mm

Competitors
Step joint offset of up to 0.035 mm

Tool material selection

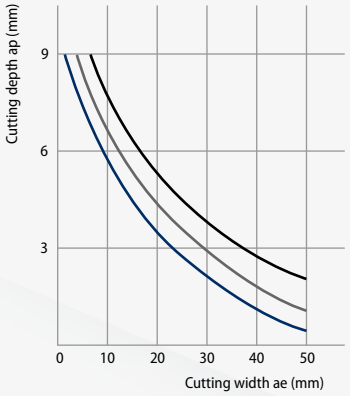
Carbide tool materials with PVD coating



* CVD-coated

Recommended cutting conditions for shoulder milling

Using the example of 21 5411_50/7 and chip breaker ST900



f_z = 0.05 mm/z

f_z = 0.10 mm/z

f_z = 0.15 mm/z

MTC POWER CARD Garant

GARANT Softcut® high-performance indexable chamfer mill 90° MTC for AO.T1104..

Robust plug-in chamfer mill. Insert seat enclosed on several sides for stabilisation of the cutters and to take up the vertical and radial forces.

Application: For wide chamfers in steel fabrications.
Outstandingly suitable for roughing and semi-roughing applications.

Note: Stepless surfaces are achieved with indexable inserts No. 215431-215487.
Use GARANT torque screwdriver TQ No. **211750 size 1.5** with bit No. **674252 size 8IP**.

90° MTC POWER CARD Garant

GARANT Softcut® high-performance indexable shoulder mill 90° MTC for AO.T1104..

High precision square shoulder mill with irregular pitch for very smooth cutting, very high precision and cutting power.
With special geometry for reduced cutting forces for MTC applications under **unstable conditions** or for spindles with low drive power.

Application: For shoulder milling in large depths, also slotting. General use in all steel materials as well as stainless and acid-resistant steels.

Note: Use GARANT torque screwdriver TQ No. **211750 size 1.5**
with bit No. **674252 size 8IP**.

90° MTC POWER CARD Garant

Garant

GARANT Softcut® high-performance indexable shoulder mill 90° MTC for indexable inserts AP.T 0602..

High precision indexable shoulder mill with irregular pitch for very smooth cutting, very high precision and very high metal removal rate.
New generation of high performance indexable shoulder mills **with special geometry for reduced cutting forces for MTC applications** under **unstable conditions** or **for spindles with low drive power. Suitable inserts APMT 0602..**

Application: For shoulder milling to large depths, also slotting.
General use in all steels including stainless and acid-resistant steels.

Spare part: Pack of insert screws No. 219827 (6IP; 0.45 Nm).

Note: GARANT torque screwdriver TQ No. **211750 size 0.45**, use bit No. **674252 size 6IP**.
The insert pocket must be modified when using indexable inserts with a radius of 2 mm.

POWER CARD Garant

Garant Indexable chamfer mill for AP.. 1604..

Note:
- **Recommended milling inserts for chamfering: No. 215720; 215724; 215728; 215744; 215758.**
- If other milling inserts are used, the tool life may be less and surface quality may suffer.
- Use GARANT torque screwdriver TQ No. **211750 size 5.0** with bit No. **674252 size 15IP**.

MTC milling inserts AP.. 1003.. for milling cutters No. 215795 – 215870

Inserts with highly positive geometry and helical cutting edges.

Note: Standard application values apply for indexable milling cutters No. 215800, 215803, 215850, 215853 and 215870.
For $a_e = 0.3 \times D$ / a_p max = 4.8 mm.

POWER CARD Garant

10-80°

Garant Adjustable indexable countersinking mill (10° – 80°) for TOH. 0902.. / 1604..

Quiet running due to **sturdy design.**

Application: For deburring edges, round holes, and long holes, and for countersinking. Rigid mounting is required (not suitable for power drills).
Steplessly adjustable for angles of 10° - 80°.

Note: Scale tolerance ±2.5°. **For setting to an exact angular value please use a pre-setting device.**
Size 20 – Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 8IP**.
Size 25 – Use GARANT torque screwdriver TQ No. **211750 size 3.0** with bit No. **674252 size 15IP**.

Adjustable indexable countersinking mill (0 – 90°) for SP.T 09T308 / 120408

Made of hardened tool steel. Deeply engraved scale.
Two exposed insert edges

Application: For forwards and reverse deburring, chamfering and countersinking.
Suitable for oblique plunging.
Steplessly adjustable for angles of 0° - 90°.

Note: **For setting to an exact angular value, use a pre-setting device.**

60° milling inserts for thread milling

Type P12 / P16 / P26

Note: **Corrected profile threading inserts** eliminate the need to program a correction to the diameter. Therefore use these inserts only for the specified thread sizes.
When using the circular mill No. 217252 size 18L and 18XL, the partial profile insert No. 217281 size 1–4 can be used only up to pitch 3.0.

POWER CARD Garant

Garant T-slot cutter for SP.T 0603.. / 09T3.. / 1204..

End mill with clamping face and internal coolant supply. Deeply recessed at the cutting area to allow working in very deep slots. Anti-corrosion surface treatment.

Application: For slots to DIN 650.

Note: Coolant feed via the internal coolant supply is preferable in order to achieve optimum chip clearance.

Size 50/2 – Use GARANT torque screwdriver TQ No. **211750 size 5.7** with bit No. **674252 size 20IP**.
Size 21/1; 25/2 – Use GARANT torque screwdriver TQ No. **211750 size 1.2** with bit No. **674252 size 8IP**.

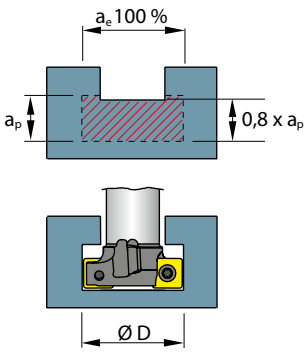
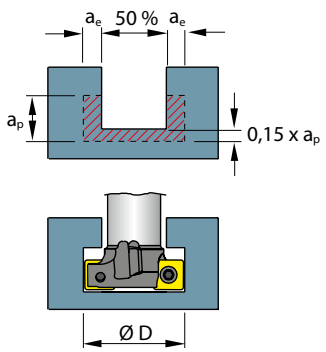
T-slot milling in the case of a_e = 100%



T-slot milling in the case of a_e = 50%



Garant Side / parting off milling cutter for clamped inserts

High-performance parting-off milling cutter system with choice of either collar and **low-cost steel blade** or collar and **high-precision temperature-resistant HSS blade.**

Application: For slitting and parting off milling. For high repetition accuracy in series production it is preferable to use the HSS blade.

Attention: Please order the assembly key No. 279940 separately.

Note: Side and parting-off milling cutters available up to Ø D = 200 mm.
HSS spare blades can be reordered as accessories.

Solid carbide | DIN 6527 | Type N | f9 | HPC

HAIMER MILL solid carbide milling cutter / HAIMER MILL solid carbide milling cutter SAFE-λOCK®

For **general-purpose use** in steel materials and high-alloy steels, especially stainless steel. With **cylindrical core** for optimised tool stiffness when milling slots. Reliable processes guaranteed when ramping and during circular interpolation milling thanks to **special end face geometry.**

22 0288/0290/0294 – With SAFE-LOCK pull-out protection to provide an additional form fit for the tool. In conjunction with SAFE-LOCK tool holders, it secures the tool to prevent it being pulled out.

Note: Tool holders with the SAFE-LOCK pull-out protection can be found under clamping technology.

22 0286 – For **HB** use order **No. 220287**.
22 0289 – For **HB** use order **No. 220291**.
22 0292 – For **HB** use order **No. 220293**.

Solid carbide | DIN 6527 | Type N | f9 | 4 | 32° | HPC

HAIMER MILL solid carbide torus cutter / HAIMER MILL solid carbide torus cutter SAFE-λOCK®

For **general-purpose use** in steel materials and high-alloy steels, especially stainless steel.
With **cylindrical core** for optimum tool stiffness when milling slots.
Reliable processes guaranteed when ramping and during circular interpolation milling thanks to **special end face geometry.**

22 0298 – With SAFE-LOCK pull-out protection to provide an additional form fit for the tool. In conjunction with SAFE-LOCK tool holders, it secures the tool to prevent it being pulled out.

Note: Tool arbor with the SAFE-LOCK pull-out protection can be found under clamping technology.

22 0296 – For **HB** use order **No. 220297**.

KENNAMETAL Shoulder mill 90° 5720VZ16 for indexable inserts ZDET 16M5

Milling body with plain shank, balanced to G = 6.3 at 30,000 rpm. Shell-type milling cutters and milling cutters with modular interfaces have to be balanced together with their holder before use in high-speed copy milling. The design allows all radii of indexable inserts up to r_e = 6.0 mm to be mounted without modification to the milling head and without length correction.

LOGIQ4FEED high feed rate milling cutter for inserts XNMU040310..

Innovative high feed milling system for efficient roughing – especially for machining deep cavities,
e.g. in tool and mould making, as well as in the aerospace industry.
The twisted shape indexable insert has an auxiliary cutting edge which guarantees a higher metal removal rate during oblique plunging.

Spare part: Pack of insert screws No. **229695 2** (TX7; 0.9 Nm).

LOGIQ4FEED milling inserts XNMU040310.. for high feed rate milling cutter

Double-sided indexable insert with 4 cutting edges. With auxiliary cutting edge.

Note: Standard application values for a_e = 0.6 to 1 × D / $a_{p\,max}$ = 0.8 mm.
The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.

KENNAMETAL High feed rate milling cutter 7792VX for extreme metal removal rates

Description: The unique design of the indexable inserts together with their approach angle in the milling body greatly reduces the radial forces and diverts them into the axial direction. Particularly thick indexable inserts with 4 cutting edges for the heaviest duties and high cost-effectiveness. The tool has particular advantages for face milling and milling deep pockets. With its ground wiper chamfer it is equally well suited also to plunge milling and finish milling operations.

KYOCERA

MFH Harrier high feed rate indexable milling cutter for SOMT.. indexable inserts

Description: MFH Harrier high feed rate indexable face mills enable short machining times thanks to high feed rates and high cutting depths. The approach angle in combination with the convex cutting edges reduces the cutting forces and minimises the tendency to vibrate.

Application: For increased productivity in face milling, pocket milling and slot milling. Because the cutting forces are so low, large overhangs for plunge milling pose no problem.

KYOCERA Milling inserts SOMT.. for MFH Harrier high feed rate indexable milling cutters

4-edge indexable inserts with convex cutting edges for low cutting forces.

Application:

22 2071–2076 – **FL geometry** is the first choice for general machining.

22 2079–2084 – **LD geometry** is also suitable for high cutting depths ($a_{p\,max}$ = 5 mm) at moderate feed rates. Do not use for helical, plunging or contour milling, or on steep walls.

22 2087–2092 – **FL geometry** (surface-oriented) is the first choice for roughing on lower-powered machines. Do not use for helical, plunging or contour milling, or on steep walls.

Note:	Standard application values for $a_e = 0.3 \times D$.

KYOCERA MFAH – highly efficient milling cutters for finish machining of aluminium

Wide range with different types of cutting edge for **a wide variety of milling applications.**

Steel or hybrid body with through-coolant.

Low cutting forces minimise the formation of burrs and chip abrasion, and ensure **high-quality machining results.**

DOVEIQMILL face mill 50° for inserts SYHU0704..

Extremely stable face milling system. The indexable inserts are fixed by means of screw clamping and by additional fixing in a dovetail-like insert seating. The positive axial installation position of the plates results in a very soft cut and thus guarantees the best surface qualities. Maximum **cost-effectiveness** due to 8-cutter indexable inserts.

Spare part: Pack of insert screws No. **229695 4** (IP15; 4.8 Nm).

DOVEIQMILL milling inserts SYHU0704.. for face mill 50°

Double-sided indexable insert with 8 cutting edges. Large flat chamfer for high surface qualities. Positive rake angle for optimum chip breaking.

Note: Standard application values for a_e = 0.6 to 1.0×D / $a_{p\,max}$ = 4.6 mm.
The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.

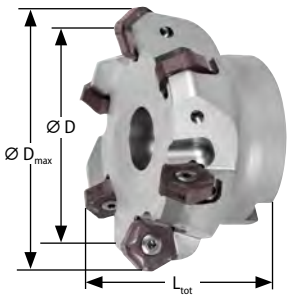
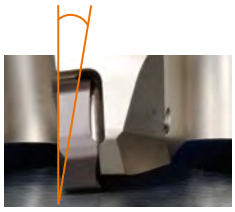
47.5° HPC

KYOCERA Indexable face mill 47.5° MFPN45 for PN.U 1205 milling inserts

High performance face milling cutter with double-sided pentagonal indexable inserts. The combination of approach angle, chip chamber design as well as the geometries and cutting angles of the indexable inserts ensure outstanding metal removal rates, chip clearance, working life, and low cutting forces, and hence high cost-effectiveness.





Low cutting force due to high axial rake (maximum +10°).

70°

KYOCERA Indexable face mill MFK for machining cast iron, for inserts PN.. 1106

Face mills for high-performance machining of cast iron. Close and very close tooth spacing for maximum productivity when machining cast iron.

Advantage:
- Cost-effective and stable machining by use of 10-edge pentagonal inserts.
- Reduced cutting forces thanks to balanced tool design and high approach angle.

75° HPC

KYOCERA Indexable face mill 75° MSRS (Monster Square) for milling inserts SPMT 1806

Cutter head with normal and close-pitch cutter spacing.

Application: Cutting depths up to 12 mm and high feed rates for highly efficient roughing. The innovative notched indexable inserts reduce the cutting pressure, which in turn significantly reduces the tendency to vibrate. This allows a larger cutting width and a significantly increased rate of metal removal.

KYOCERA Indexable inserts for indexable face mill 75° MSRS (Monster Square)

Special indexable insert geometry ensures reduced cutting forces and improved chip breaking. All types with **wiper cutters** for high feed rates.

Application:

22 4012/4013 – **NB2 / NB3:** General application

22 4018/4019/4030/4031 – **NB2T / NB3T:** Ideal for **interrupted cutting**, high cutting speeds and high feed rates.

22 4024/4025 – **NB2P / NB3P:** For **reduced cutting forces.** Specially for large overhangs and thin workpieces.

Note: **The milling cutters are alternately equipped with equal numbers of indexable inserts of forms NB2 and NB3.** Comply with the assignment instructions on the cutter.
Standard application values for $a_e = 1 \times D$.

KYOCERA 90° indexable milling cutter MFWN for indexable inserts WNMU 0806..

Milling cutter with double-sided indexable inserts.
The combination of approach angle, chip chamber design as well as the geometries and cutting angles of the indexable inserts ensure outstanding metal removal rates, chip clearance, working life, and low cutting forces, and hence high cost-effectiveness.
Size 160/8–250/14 – Without internal cooling.

KYOCERA Indexable inserts WNMU.. for indexable milling cutter No. 225600 / 225615

MEGACOAT-coated indexable inserts with **6 edges** – due to double-sided version. The high axial rake angle up to a maximum of 13° significantly reduces the cutting force.
22 5627–5630 – Ground version for significantly better surface quality.

Application:

22 5621 – The **GH geometry** is the first choice for roughing applications.
22 5620/5626 – The **GM geometry** is the first choice for general machining.
22 5623/5625 – The **SM geometry** has a highly positive rake and cuts smoothly.
22 5627–5630 – The **GL geometry** is suitable for good surface finishes thanks to the ground version and flat cutting edge.

Note: Standard application values for $a_e = 0.3 \times D$.

NEODO face / shoulder mill for inserts SZ.U0804..

Highly efficient milling system for facing and milling 90° shoulders. For roughing and pre-finishing especially of steel and cast iron materials. Cost-effective due to 8 cutting edges per indexable insert. Extremely stable embedding for the inserts in a dovetail-shaped insert seating.

Spare part: Pack of insert screws No. **229696 3** (IP9; 2.0 Nm).

NEODO milling inserts SZ.U for face / shoulder mill

Double-sided indexable insert with 8 helical cutting edges. Special cutting edge geometry for smooth cutting to reduce power consumption during machining.

Note: Standard application values for a_e = 0.3 to 1 × D / $a_{p\,max}$ = 5.0 mm.
The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.

KYOCERA Indexable inserts TOMT060508 for 90° indexable milling cutters MEV No. 226400 / 226410 / 226420

Improved chip evacuation with unique chip breaker design for the indexable inserts. The maximum axial rake angle of 17° ensures low cutting forces.

Application:

22 6430/6436/6442 –The GM geometry is the 1st choice for general machining.

22 6433/6439/6445 –The SM geometry is the 1st Choice for lower cutting forces.

90° HPC

HELI3MILL shoulder mill 90° for inserts TP..1003.. and TD..1505..

Reliable shoulder milling system for a wide range of applications. Versions in two system sizes with cutting edge lengths in 10 and 15 mm.
Optimally supported Trigon indexable inserts in the seat ensure true 90° shoulders. Ideally suited for circular interpolation milling operations and ramping.

HELI3MILL shoulder mill 90° for TP..1003..

Spare part: Pack of indexable insert screws No. **229695 1** (TX10; 3.2 Nm).

HELI3MILL milling inserts TP..1003.. and TD..1505.. for 90° shoulder mill

Trigon indexable insert with 3 helical cutting edges. Axial and radial positive cutting edge design. For effective and precise machining of 90° shoulders.

Note: The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.

KYOCERA 90° indexable milling cutter MECX for indexable inserts BDMT 0703..

Description:

22 7100/7105 – Very close spacing provides improved productivity even under more unstable machining conditions. Low cutting forces and high stability for low tendency to vibrate. Permits various milling tasks such as milling shoulders and ramps etc.

KYOCERA 90° indexable milling cutter MEC11T for indexable inserts BD. T 11T3..

Description: MEC11T mill type with higher stability due to lower number of cutters than MECX. This enables higher feed rates per cutter.

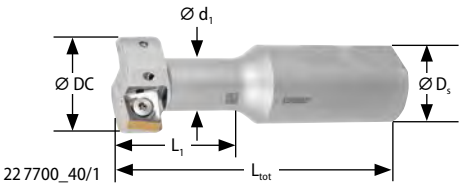
HELISLOT slot and side milling cutter for inserts XNMU130608 and XNMU090408

Economical machining of grooves and T-slots. Achieve different slot widths with only one insert size thanks to the insert seat concept with staggered teeth formation. Square inserts with positive rake angle for efficient and gentle machining. Very reliable process thanks to optimised insert support in the seat.



22 7700_40/1

HELISLOT full slot milling cutter for XNMU130608

Spare part: Pack of insert screws No. **229697 1** (IP15; 4.8 Nm).

HELISLOT milling inserts XNMU130608 and XNMU090408 for slot and side milling cutters

Double-sided indexable insert with 8 helical cutting edges. Very robust design, special insert thickness. Very reliable process due to positive installation position in the insert seat. Excellent chip control and evacuation.

Note: Standard application values for a_e max
The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.

Cermet																								
Cermet grade for general machining of steel. Good cutting edge stability. Uncoated.		CU7025																						
Tungsten carbide																								
Grade for general machining of steel. Extremely high wear resistance. PVD coating.			HB7010																					
General-purpose tool material grade. TiAlN (PVD coating).			HB7020																					
Grade for general machining of steel and cast iron. Al_2O_3 + TiCN + TiN (CVD coating).		HB7215																						
Grade for general machining of aluminium. Outstanding wear resistance and cutting edge stability. Uncoated.															HU7310									
Grade for general machining of aluminium, non-ferrous metals and cast aluminium. CVD-diamond coating.															HU7310									
PCD																								
Polycrystalline diamond, fine grain. Very good cutter sharpness, wear resistance and toughness.															PCD									
CBN																								
General-purpose CBN grade for hardened materials. Excellent toughness properties.																						CBN825

Garant Chip breaker selection – ISO indexable turning inserts

Negative

Application		Chip breaker	Geometry	Characteristics
P	Finishing	WSS		**Wiper** geometry for finishing of general and alloy steels. Higher feed rates with the same surface quality.
		SS		Specially for finishing of general and alloy steels. For high feed rates at low cutting depths.
	Medium	WSM	 Radius profile Minor cutting edge profile	**Wiper** geometry for medium machining of general and alloy steels. Higher feed rates with the same surface quality.
		SM	 Radius profile Minor cutting edge profile	Medium machining of general and alloy steel grades. Positive primary chamfer for smooth cutting.
		SM spec. KNUX		Machining of carbon steel and alloy steels.
	Roughing	SG	 Radius profile Minor cutting edge profile	Roughing operations on general and alloy steels. Large flute combined with a wide, flat primary chamfer for high feed rates.
	Coarse machining	SR	 Radius profile Minor cutting edge profile	Rough machining of low-tensile steels. The positive primary chamfer and curved cutting edge reduce the cutting resistance.
M	Finishing	VS		Light to medium machining of stainless steels. Also for difficult to machine materials. Sharp cutting edges for a soft cutting action.
	Medium	VM		Distinctive chip evacuation geometry coupled with slightly positive cutting angle give the best chip evacuation. Main application in stainless steels.
		VM spec. KNUX		Machining of stainless steels.
	Roughing	VG		For rough machining of stainless steels. Sturdy cutting edge version.
O	Medium	GM	 Radius profile Minor cutting edge profile	High cutting edge stability for a wide range of applications in cast materials.
	Roughing	Cast iron	 Radius profile Minor cutting edge profile	Stable cutting edge and wide protective chamfer for medium rough machining of castings.
N	Medium	AM1		For finishing to medium roughing of aluminium. Positive chip-breaker geometry.
S	Finishing	TIS		Finish machining of difficult-to-machine materials such as nickel-based alloys or titanium.
	Medium	TIM		Medium machining of heat-resistant alloys. Positive cutting angle and large flute permit targeted chip evacuation.
UNI	Medium	UM1		Chip breakers for medium machining. For general use over a wide range of materials.
		XUM		Open and positive chip breaker for soft cutting and optimum chip formation.

Positive

Application		Chip breaker	Geometry	Characteristics
P	Fine finishing	SF		For precision finishing in steels. Positive rake geometry for soft cutting.
	Finishing	WSS		**Wiper** geometry for finishing of steels and stainless steels. Higher feed rates with the same surface quality.
		SS	 Radius profile Minor cutting edge profile	Finishing operations on general, alloy and stainless steels. Smooth cut due to sharp cutting edge profile.
	Medium	WSM		**Wiper** geometry for medium machining of general and alloy steels. Higher feed rates with the same surface quality.
		SM	 Radius profile Minor cutting edge profile	First choice for medium machining of carbon steel, alloy and stainless steels. Combination of sharp cutting edges and stability.
M	Fine finishing	VF		For precision finishing in stainless steels. Positively designed geometry for soft cutting.
	Finishing	VS		For light and medium operations in stainless steels. Heavily profiled surface for unobstructed swarf evacuation. Sharp cutting edges.
	Medium	VM		For medium and pre-machining of stainless steels. Strong cutting edges and positive rake angle.
O	Medium	GM		High cutting edge stability for a wide range of applications in cast materials.
N	Fine finishing	AF		Positive rake geometry specially for non-ferrous metals and plastics.
	Finishing	AF		Positive rake geometry specially for non-ferrous metals and plastics.
	Medium	AM	 Radius profile Minor cutting edge profile	Aluminium machining. Large rake angle and special surface geometry permit excellent chip clearance and low cutting forces.
S	Finishing	TIS		Exceptionally well suited for use on high temperature materials.
UNI	Medium	UM1		Chip breakers for medium machining. Universally applicable in a wide range of materials.
		XUM		Open and positive chip breaker for soft cutting and optimum chip formation.

KYOCERA Chip breaker selection – ISO indexable turning inserts

Negative

	Application	Chip breaker	Geometry	Characteristics
P	Finishing	WP		Finishing with **wiper** geometry. For twice the feed rate without compromising the surface quality.
		WQ		**Wiper** geometry for finish machining with double the feed rate without affecting the surface quality.
		PP		Stable chip control in a wide feed range thanks to 3-stage point structure. Low cutting force.
	Finishing – Medium	PQ		For finishing up to light cuts. Good chip clearance.
		HQ		Wide chip clearance area due to 3D rake angle and double overhang geometry.
	Medium	PS		Extremely stable due to large contact area.
		PG		Chip breaker with stable edges for general machining.
		PMG		For medium machining (wide range of applications). The chip evacuation prevents crater wear and promotes a long tool life.
	Roughing	PH		For roughing steels. Suitable for heavily interrupted cutting and workpieces with casting skin.
	Coarse machining	PX		Roughing at high feed rates. The chip breaker requires only low cutting force.
M	Finishing	MQ		Large rake angle, round cutting edge design. Low cutting force and good chip clearance.
	Medium	MS		First-class sharp cutting edges due to positive rake geometry. Particularly stable cutting edge.
K	Medium	KG		Chip breaker with positive chisel edge for smooth to interrupted cutting.
N	Medium	AH		Polished chip breaker. Very good chip clearance and low tendency to edge build-up.
S	Finishing	MQ		Large rake angle, round cutting edge design. Low cutting force and good chip clearance.
	Medium	MU		Large rake angle reduces the cutting forces. Low burr formation due to reduced damage due to formation of notches.
	Coarse machining	SX		Highly efficient roughing thanks to unique cutting edge design. Shim insert necessary!

Positive

	Application	Chip breaker	Geometry	Characteristics
P	Fine finishing	MP-CF		Suitable for small cutting depths (0.02 mm – 0.2 mm).
	Finishing	WP		Finishing with **wiper** geometry. For good chip clearance at high feed rates. Reduces the surface wear rate.
		MFP-SKS		Stable chip clearance thanks to base and chip breaker surfaces. For finishing from 0.2 mm –1.5 mm.
		PP		Stable tool life due to special cutting edge design with improved strength.
	Finishing – Medium	HQ		Chip breaker for medium machining.
M	Fine finishing	MFP-PF		Sharp cutting edge version for finish machining of materials that are difficult to machine.
	Finishing	MFP-SKS		Stable chip clearance thanks to base and chip breaker surfaces. For finishing from 0.2 mm –1.5 mm.
		MQ		Good chip evacuation when used for internal turning. The swarf is small and tightly rolled so it does not lodge in the toolholder.
K	Finishing – Medium	GK		Good chip clearance due to chip breaker and chip diverter.
N	Finishing	AP		Good chip clearance. Sharp cutting edge for excellent surface quality. Chip breaker polished.
	Finishing – Medium	AH		Sharp cut and good chip clearance with low cutting force. Low tendency to edge build-up due to polished rake faces.
S	Finishing	MQ		Good chip evacuation when used for internal turning. The swarf is small and tightly rolled so it does not lodge in the toolholder.

Garant HOLEX Selection of chip breakers, ISO indexable turning inserts

Member IMC Group ISCAR

Negative

	Application	Chip breaker	Geometry	Characteristics
P	Finishing	F3P		Double-sided indexable insert with positive rake angle to reduce cutting forces when finishing steel.
P	Medium	M3P		Double-sided indexable insert for medium machining of steel with reinforced cutting edge to increase tool life.
M	Finishing	F3M		Double-sided indexable insert with positive rake angle for finishing stainless steel. The unique insert geometry with a wavy surface prevents chipping.
M	Medium	M3M		Double-sided indexable insert for medium machining of stainless steel with reinforced cutting edge to increase tool life.

Positive

	Application	Chip breaker	Geometry	Characteristics
P	Finishing	F3P		Chip breaker with positive rake angle for fine and finish machining of steel.
P	Medium	M3P		Chip breaker with reinforced cutting edge and positive rake angle for medium machining of steel.
M	Finishing	F3M		Chip breaker with positive rake angle for finish machining stainless steels, also suitable for superalloys and exotic materials.
M	Medium	M3M		Chip breaker with reinforced cutting edge and positive rake angle for medium machining of stainless steel.

HOLEX

Negative

	Application	Chip breaker	Geometry	Characteristics
P	Finishing	PF		Soft-cutting geometry for finish machining of steels.

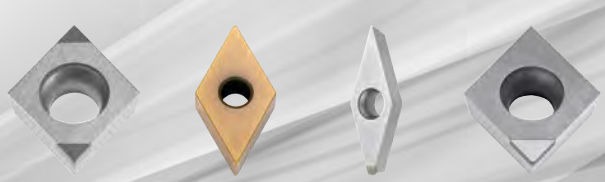
Garant

Indexable turning inserts CBN / ceramic / MCD / PCD

- **CBN** - page 760 (negative) and 815 (positive)
- **Ceramic** – page 762 / 763
- **MCD** – page 817
- **PCD** – page 818 / 819



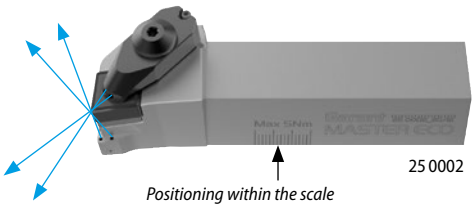
Standard

Garant GARANT Master Eco DCLN 95° clamp toolholder for indexable inserts CN..

Highly efficient cooling directly on the cutting edge and additional flank face cooling.

Note: Coolant transfer via slot on the underside of the shank in conjunction with GARANT Master Eco holder No. 319006 – 319136 or No. 317900 for shank length < 125 mm. Optional connection possibility via hose connection (G 1/8 inch) No. 269207 and 269208.

With flank face cooling



25 0002

Positioning within the scale ensures precise coolant transfer.

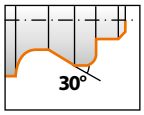
Garant

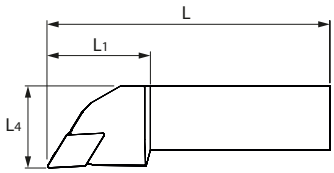
GARANT Master Eco .DJN 93° clamp / lever lock toolholder for indexable inserts DN..

Highly efficient cooling directly on the cutting edge and additional flank face cooling.

Note:	Coolant transfer via slot on the underside of the shank in conjunction with GARANT Master Eco holders No. 319006 – 319136 or No. 317900 for shank length < 125 mm. Optional connection possibility via hose connection (G 1/8 inch) No. 269207 and 269208.

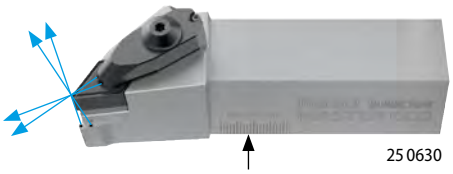


With flank face cooling



Clamping with clamp

Standard



25 0630

Positioning within the scale ensures precise coolant transfer.

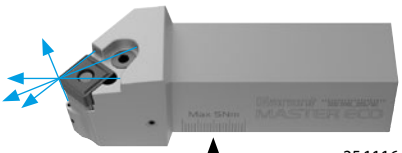
Garant GARANT Master Eco PSSN 45° lever lock toolholder for indexable inserts SN..

Highly efficient cooling directly on the cutter and additional flank face cooling.

Note: Coolant transfer via slot on the underside of the shank in conjunction with GARANT Master eco toolholders No. 319006 – 311936 or No. 317900 for shank length < 125 mm. Optional connection possibility via hose connection (G 1/8 inch) No. 269207 and 269208.

DIN ISO 5610 Standard

With flank face cooling



25 1116

Positioning within the scale ensures precise coolant transfer.

Garant CBN indexable inserts

Innovative **"all-in-one" concept** to reduce the amount of variation in your stock levels and to give you the flexibility you need in your production.
New type of CBN with a balanced combination of wear resistance and tensile strength for general-purpose use in hardened steels up to 67 HRC in combination with a special chamfered profile.
For use both in continuous cutting and also in slightly interrupted and heavily interrupted cutting.
SIMPLE. FAST. ALWAYS THE RIGHT CHOICE.

Garant Indexable inserts CBN (0°)

25 5403–5451/5463/5466 – Fitted with 2 cutters.
25 5454/5457/5469–5481 – Fitted with 3 cutters.

KYOCERA Indexable inserts CBN (0°)

MEGACOAT coated CBN inserts.

Size ME – MultiEdge; 2 or 3 cutting edges per insert.
Size MET – MultiEdge Tough; 2 or 3 cutting edges per insert, with special honing for optimisation in interrupted cutting.
Size MEW – MultiEdge Wiper; 2 cutting edges per insert with wiper geometry.

GARANT Master Eco SCLC 95° screw-on toolholder for indexable inserts CC..

Highly efficient cooling directly on the cutting edge and additional flank face cooling.

Note: Coolant transfer via slot on the underside of the shank in conjunction with GARANT Master Eco toolholders No. 319006 – 311936 or No. 317900 for shank length < 125 mm. Optional connection possibility via hose connection (G 1/8 inch) No. 269207 and 269208.

With flank face cooling.

DIN ISO 5610 Standard

26 0026

Positioning within the scale ensures precise coolant transfer.

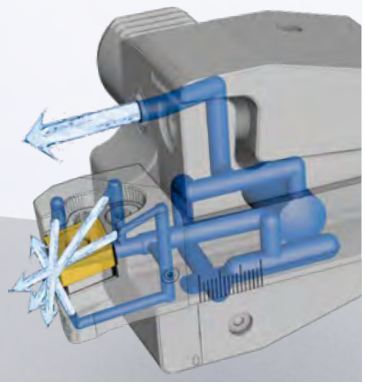
SCREW-ON TOOLHOLDER WITH THROUGH-COOLANT – DIFFERENTIATION

Garant Master

GARANT Master Eco – efficient, systematic cooling.

- Minimises heat-induced insert wear on both the rake face and the flank face.
- Variable arrangement of the VDI holder system with coolant transfer via slot at the bottom of the shank.
- Problem-solver, especially for materials with low thermal conductivity.



HOLEX Pro

HOLEX Pro Eco – simple and clever.

- Minimises heat-induced insert wear on the rake face.
- Coolant transfer via tubing below the head without any other peripherals.
- The smart choice for standard applications.

GARANT Master Eco SDJC 93° screw-on toolholder for indexable inserts DC..

Highly efficient cooling directly on the cutting edge and additional flank face cooling.

Note:	Coolant transfer via slot on the underside of the shank in conjunction with GARANT Master Eco holder No. 319006 – 311936 or No. 317900 for shank length < 125 mm. Optional connection possibility via hose connection (G 1/8 inch) No. 269207 and 269208.

DIN ISO 5610 | Standard

26 0292

Positioning within the scale ensures precise coolant transfer.

With flank face cooling

GARANT Master Mute vibration-damping boring bar shanks

Supplied with: Reducing adaptor for coolant connection.

Note:
Do not clamp on the area marked S!
D_{min} = 1/2 shank ∅ + H + cutting head centre-line offset L_3.
Usable length = overall length L minus clamping length (recommended = 3×D).
Use **only with internal cooling** (temperature resistance of up to max. 100°C).

For diamond burnishing

Diamond burnishing tool for material classes P, M, K, N and S.

Cutting dataa: Cutting speed v_c = value of finish machining (start value).
Reduce the cutting speed step by step if vibrations occur.
Feed rate f = 70% of the value of the finish machining (start value).
Infeed a_p = 0.1 mm (start value) up to a maximum of 0.2 mm.

Function: The pressure of the diamond burnishing tip produces a material flow from the near-surface material layer.

Application: For surface machining up to R_a = 0.3 µm on materials up to 65 HRC.

Supplied with: Includes diamond burnishing tip and clamping screw.

Note: A surface quality of at least R_a = 1.6 µm is recommended by way of preparation.

Garant Indexable inserts CBN (5° / 7°)

Innovative **„all-in-one“ concept,** to reduce the variety of items you hold in stock and give you the flexibility in production that you need.
New type of CBN with a balanced combination of wear-resistance and tensile strength for general-purpose use in hardened steel up to 67 HRC in combination with a special chamfered profile.
For use both in continuous cutting and also in slightly interrupted cutting and heavily interrupted cutting.
SIMPLE. FAST. ALWAYS THE RIGHT CHOICE.

Garant Indexable inserts CBN (5° / 7°)

26 5403–5442/5457–5484 – Fitted with 2 cutters.
26 5445–5454 – Fitted with 3 cutters.

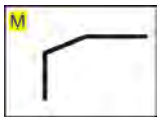
HOLEX Indexable inserts CBN (5° / 7°)

- Disposable insert.
- Single cutting edge.

Note: Further indexable insert shapes, sizes and corner radii available on request.



Cutting edge (chamfered). Chamfering even for slightly interrupted cutting.

Indexable inserts MCD

MCD - mono-crystalline diamond, laser-profiled cutting edges.
Universal chamfering (NU) for all non-ferrous metals and synthetic materials (PMMA, POM, acrylic etc.).
Application: For very fine machining for the best finishing surfaces.
Recommendation: For the best results, use the GARANT Master Eco system.
Alternatively all suitable ISO tool holders and boring bars can be used.

Garant Indexable inserts PCD (7°)

PCD – Polycrystalline diamond, fine grain.
Size N – Neutral, without chip breaker.
Size TWF – Finishing, sharp edges for low cutting pressure.
Size TWM – General machining, stable cutting edge for high metal removal rates.
Size TWN – Roughing, stable cutting edge for large cutting depths.
Application: For aluminium, aluminium alloys, non-ferrous metals, plastics, composite materials, titanium alloys, sintered metals.

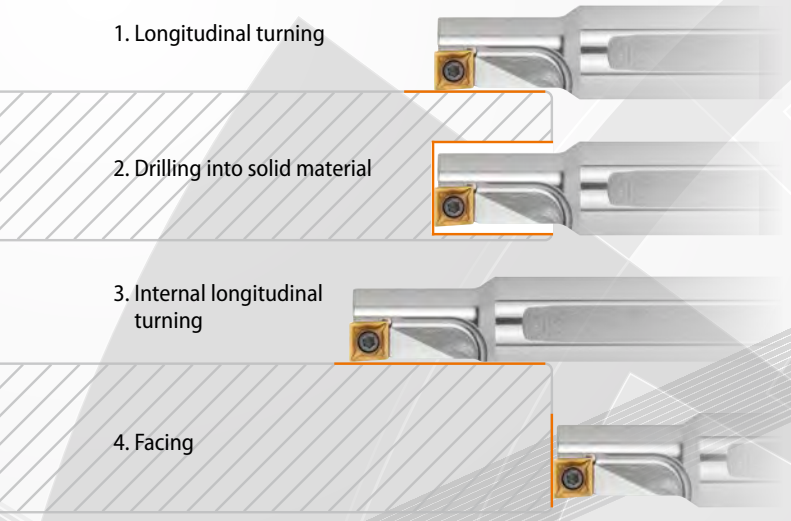
Garant “4 IN 1” DRILLING AND TURNING TOOL

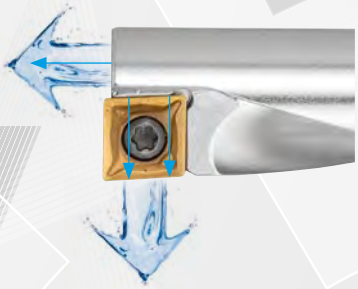
This multi-functional drilling and turning tool allows one-off and series components to be produced inexpensively and efficiently. Tool-changing and set-up times are minimised and the cost-benefit ratio is maximised.

1. Longitudinal turning
2. Drilling into solid material
3. Internal longitudinal turning
4. Facing



Ideal cooling.

Optimised cooling using three target-directed coolant channels. The positioning of these channels permits better chip evacuation from holes.



Optimum stability.

- Specially hardened shank for outstanding stability.
- Strength and dynamics are equally matched.
- Sturdy design of the carrier due to relatively small indexable insert.
- Improved resistance to the radial and axial forces that occur.

Reliable changing of the indexable insert.

The positive-locking design of the insert seat makes it impossible to incorrectly fit the indexable insert.

The GARANT “4 in 1” drilling and turning tool improves your machine efficiency by up to 30% by eliminating tool-changing time and machine idle time.

26

Variety of tool materials for optimum machining results.

Especially in sub-contract manufacturing, it is not unusual to experience a constant change of the material to be machined. The many demands on tool life, surface and tolerance can be satisfied by selecting the right tool material.

HBZ025 HBZ030 HBZ035 HBZ120 HBZ140 HUZ310 HBZ310

GARANT "4 in 1" drilling and turning tools

26 8404/8405 – Plain shank.
26 8408/8409 – Plain shank **with collar.**

Application:
1. Facing of end faces.
2. Drilling (drilling out and drilling from solid) – flat drilled hole end.
3. Internal longitudinal turning.
4. External longitudinal turning.

Note:
- Choose corner radii and toolholder size as large as possible.
- **Drilling tolerance + 0.15 mm** (for drilling processes with a driven tool).
- When drilling greater than nominal ∅, residual material will remain.
- **Always use internal cooling for drilling (at least 5 bar).**

WE'RE BIG ON THE LITTLE THINGS TOO!

Our comprehensive range includes suitable turning solutions starting from a hole diameter of just 0.3 mm.

SIMTEK

With the simturn range, the Hoffmann Group offers a comprehensive turning range for micro-machining. On the following pages you will find a large selection ex stock from the Hoffmann Group.

All 16,000 standard tools under the Simtek brand can be ordered from the Hoffmann eShop.
Individual custom solutions are available on request.

simturn AX

SIMTEK small part machining type AX

- From hole diameter 0.3 mm.
- CBN tools from a hole diameter of 1 mm.
- Overhang lengths up to 9×D.
- Standard range ex stock, Hoffman Group.
- Special solutions on request.

Member IMC Group IMC MIN CUT MINI FACE LINE

MINCUT – the flexible system for axial and internal machining of small and medium-sized components.

- Can be used from 8 mm bore diameter.
- Groove widths from 1.5 – 3.5 mm.
- Groove depths of up to 15 mm possible.
- Optimum chip evacuation thanks to soft-cutting geometry and targeted coolant supply into the cutting zone.
- Stable and accurately repeatable screw clamping thanks to defined contact surfaces between the tool and the cutter insert.

Garant Mini boring bar for indexable inserts

- Carbide insert screwed on to the end face, positive force transmission due to end face serrations.
- Insert change is very easy to perform.
  27 0006 – Low-vibration carbide shank with soldered steel head and hardened insert seat.

Note:
27 0006 Size 42/6; 50/6; 64/8 – **Only** for boring and chamfering!

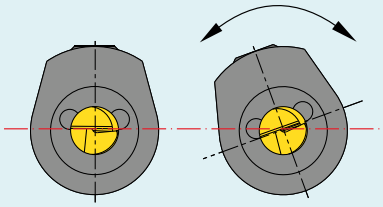
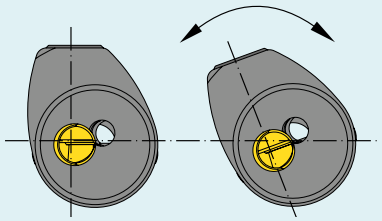
simturn AX Center Line

Standard version



Suitable for all cutter inserts.

Center Line version



For use only with optimised cutter inserts (for Ø range < 4.2 mm).

- The eccentric mounting of the Centre Line version ensures extremely precise cutting edge positioning, even in the event of slight variations in the tool mounting.
- The cutting results are significantly optimised, especially for very small diameters.
- Ideal coolant feed directly to the bore to be machined.

simturn AX Center Line toolholder

Eccentric mounting of cutter inserts.

Advantage: Eccentric mounting ensures precise cutting edge positioning at all times.

Application: In particular for very small boring-out diameters.

SIMTEK simturn AX toolholder

simturn AX toolholder with ME clamping system

Optionally select 4 different types of coolant feed. Easy to adjust using only two grub screws.

Advantage: The ME clamping system permits optimum precision and stability thanks to the all-round wrapping.

Application: Especially for long overhangs to reduce vibrations.

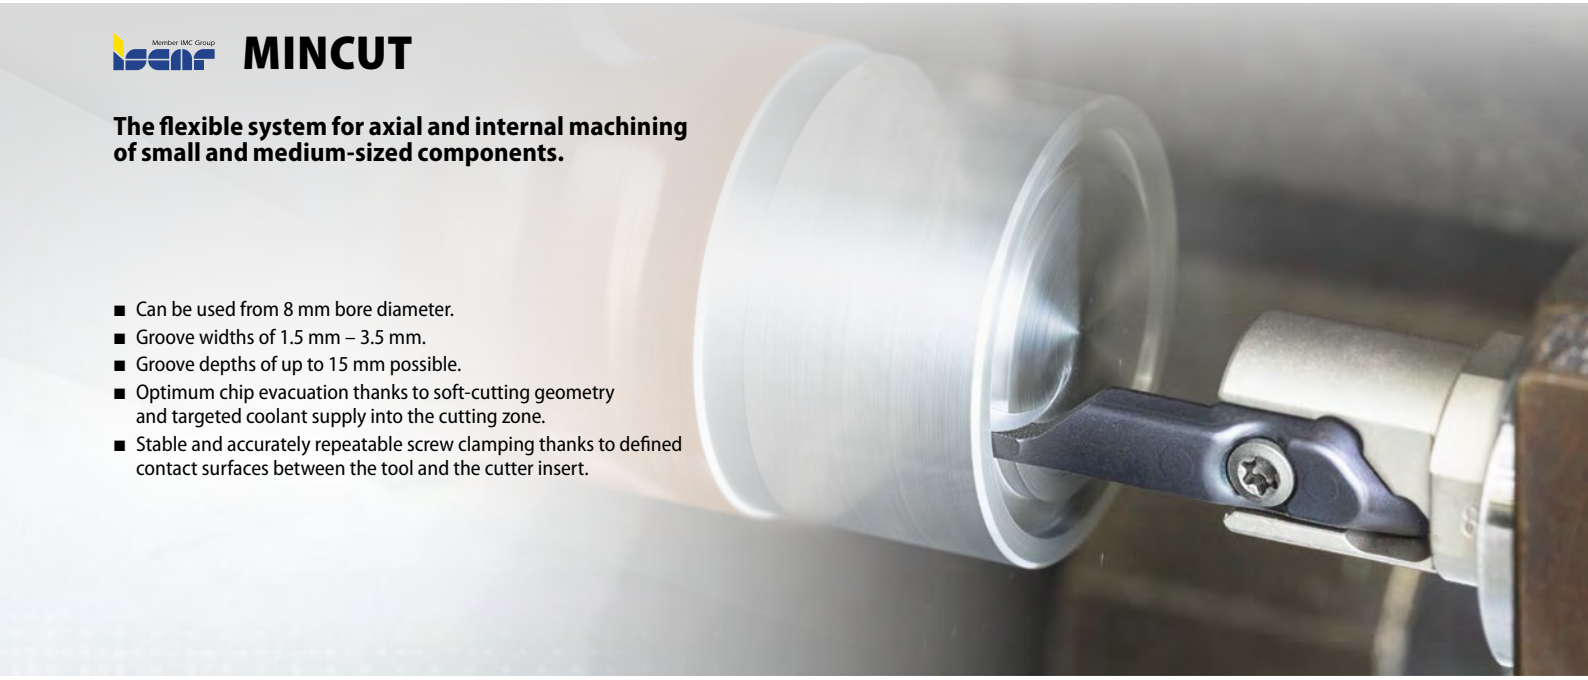
MINCUT

The flexible system for axial and internal machining of small and medium-sized components.



- Can be used from 8 mm bore diameter.
- Groove widths of 1.5 mm – 3.5 mm.
- Groove depths of up to 15 mm possible.
- Optimum chip evacuation thanks to soft-cutting geometry and targeted coolant supply into the cutting zone.
- Stable and accurately repeatable screw clamping thanks to defined contact surfaces between the tool and the cutter insert.

MINCUT boring bar

Suitable for: Inserts No. 270422 – 270429.
Application: For face grooving and groove turning in the diameter range 8 mm – 17 mm.

Regrinding service

GOOD FOR YOU AND GOOD FOR THE ENVIRONMENT.

With our regrinding service, you save money and resources.

Further information on the regrinding service:
Discover all about our services online now.
https://hog.tools/regrinding

Good for you

It is already worth it from the first regrind.
Overall, you can expect amazing savings of up to 85%. Without compromising on quality.

Good for the environment

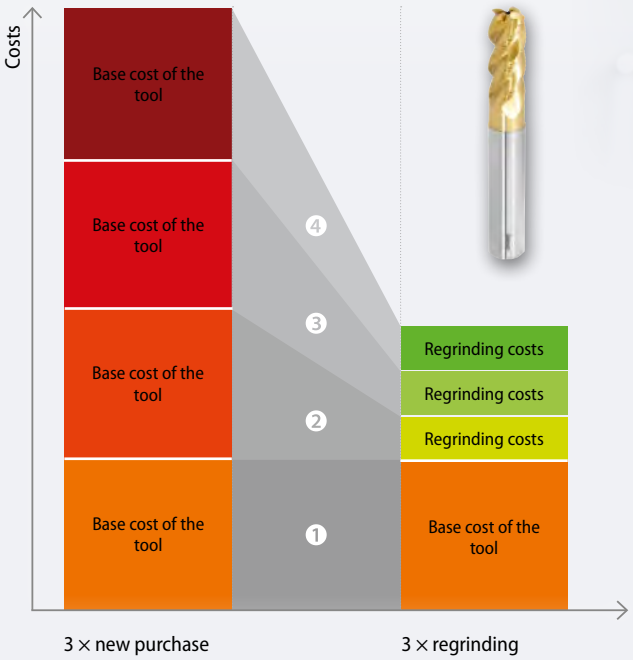
Reusing the tool saves valuable resources and avoids unnecessary waste.
A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service. **An all-round worry-free package has never been so easy – and with maximum cost transparency.**

KEEP AN EYE ON THE COSTS.

With our regrinding service, you save money and resources.



Good for you

It is already worth it from the first regrind.
All with the original regrind quality, to the original geometry and on the original production machines. There are no compromises here.

Up to **85 %** savings potential … … with **95 %** tool life … and **100 %** machining performance

Full power with maximum cost control – **test our regrinding service today!**

27

Garant **Thread turning – overview of the range**

Thread standards for our catalogue range.

Special solutions and other thread standards can be provided upon request – simply contact us for more details!

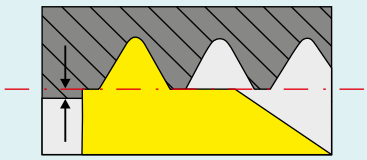
			internal		10 – 4				16 – 22	849

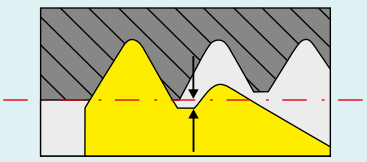
Carbide grades:

Grade designation	Application	Description
HB7010	P M O N	■ Multi-layer coating ■ Very good edge sharpness ■ Use for uninterrupted cutting ■ Universal use for steel up to < 55 HRC
HB8015	P M O N	■ AlTiN, PVD coating ■ Multi-purpose micro-grain grade ■ Extended contour grinding to reduce burrs
HB7020	P M O N	■ TiAlN coating ■ Fine-grain substrate ■ Optimised chip evacuation ■ Very high wear resistance ■ Good tensile strength ■ Universal use for steel up to < 55 HRC
HB7125	M S	■ AlTiN, multi-layer PVD coating ■ Specially adapted for stainless steels ■ Also suitable for Inconel when used with cutting oil
HU7315	N Ti	■ Uncoated ■ Especially for aluminium and titanium alloys

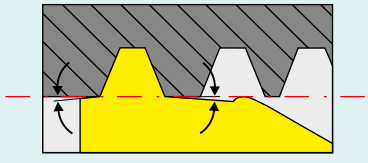
Differentiation between full, partial and semi-profile:



With **full profile** threading inserts the entire thread is cut in full with the outer or inner ∅ without any additional operations. The threads produced are burr-free and true to DIN/ISO gauge.



Partial profile threading inserts cover a wide range of different pitches. However, they do not produce true to gauge threads according to DIN/ISO, since the profile radius does not match the respective pitch.



Semi-profile threading inserts cut the complete profile and deburr the tips of the thread flanks. The external or internal ∅ is not cut with the profile.

Garant Thread turning – error analysis and solutions

Problem		Possible cause		Solution
Increased wear on the flank faces		Excessively high cutting speed	▶	Lower cutting speed / use coated cutter insert
		Insufficient cutting depth / too many passes	▶	Increase the cutting depth per pass
		Unsuitable carbide grade	▶	Use a coated carbide grade
		Insufficient cooling	▶	Increase coolant flow
Uneven wear along the cutting edge		Incorrect pitch angle	▶	Use the correct shim
		Incorrect infeed method	▶	Use alternate infeeds
Extreme plastic deformation		Cutting depth too high	▶	Reduce the cutting depth / increase the number of passes
		Insufficient cooling	▶	Increase coolant flow
		Excessively high cutting speed	▶	Reduce cutting speed
		Unsuitable carbide grade	▶	Use a harder carbide substrate
		Corner radius too small	▶	Select a larger corner radius
Fracture of the cutting edge		Cutting depth too high	▶	Reduce the cutting depth / increase the number of passes
		Extreme plastic deformation	▶	Reduce cutting speed
		Insufficient cooling	▶	Increase the flow rate and adjust the flow direction
		Unsuitable carbide grade	▶	Use a tougher carbide substrate
		General instability	▶	Check/improve the system stability
Built-up edge		Cutting speed incorrect	▶	Adjust the cutting speed
		Unsuitable carbide grade	▶	Use a coated carbide grade
Thread profile too flat		Point height incorrect	▶	Correct the point height
		Cutter insert does not machine the threaded point	▶	Measure the workpiece ∅
		Cutter insert is worn	▶	Replace the cutter insert in good time
Poor surface quality		Excessively low cutting speed	▶	Increase cutting speed
		Shim incorrect	▶	Use the correct shim
		Unsuitable infeed method	▶	Use alternate or radial infeed

Infeed methods

Infeed method		Recommended for		Advantage
Radial infeed		■ Pitches up to 1 mm ■ Short-chipping material ■ Cold-formed or hard material	▶	■ Easy to use ■ Also on conventional machines
Flank infeed		■ Pitches > 1 mm (24 TPI) ■ Trapezoidal thread.	▶	■ Good chip clearance
Modified flank infeed		■ Pitches > 1 mm (24 TPI) ■ Trapezoidal thread	▶	■ Good chip clearance ■ Reduces forces on the flank side
Alternative flank infeed		■ Cutter inserts with small radii ■ E.g. for NPT thread	▶	■ Good chip clearance ■ Even load/wear on both flanks

Garant THREADING INSERTS TYPE BF AND CB

Type BF (Burr Free)
For higher thread quality requirements.

- Contour grinding deburrs the thread edge.
- Creates burr-free, ready-to-install components.
- Reduces vibration.
- Improves the edge quality.

New grade HB8015 universally suitable for steel and stainless steel.

Type CB (Chip Breaker)
For higher process reliability.

- Sintered chip breaker.
- Ground profile.
- Particularly suitable for long-chipping materials.
- Reduces the incidence of edge build-up.

Garant Threading inserts with contour grinding / chip breaker

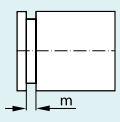
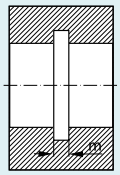
Garant Profile turning inserts for threading tool holder – see page 883

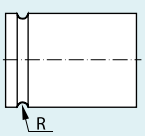
DIN 471

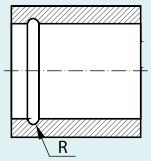


DIN 472



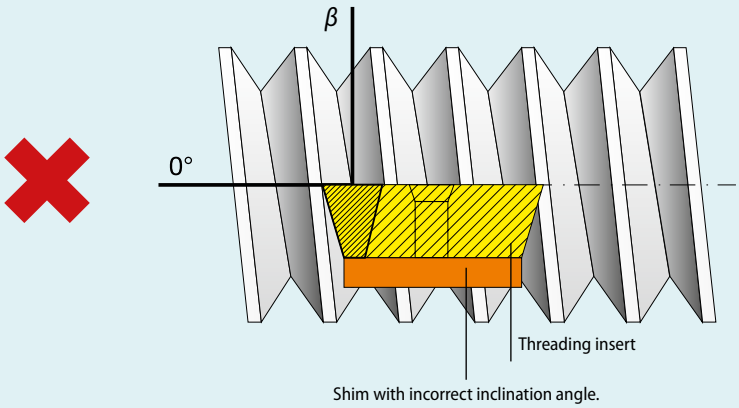
DIN 7993

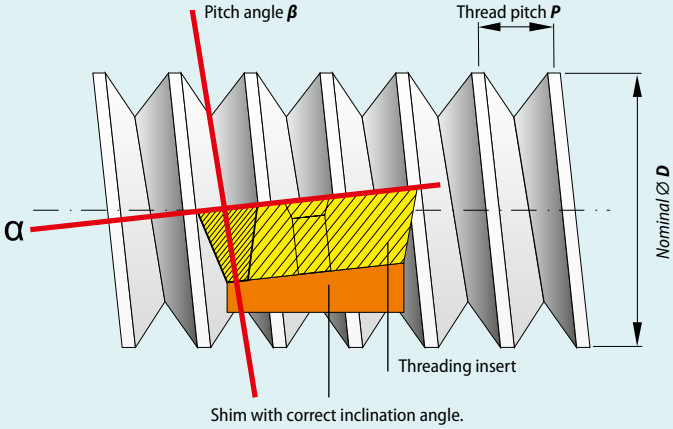




Garant Determination of the necessary inclination angle

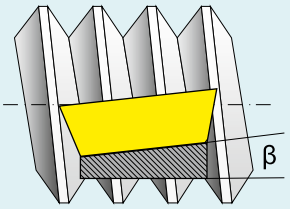
The insert inclination angle α must correspond with the thread pitch angle β as exactly as possible.
Only by this means can maximum profile accuracy and best surface quality be achieved.
At the same time the evenness of the wear increases the working life of the insert.





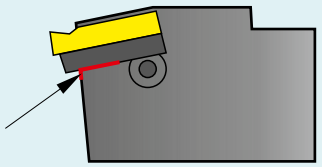
Three important factors for the shim:

❶



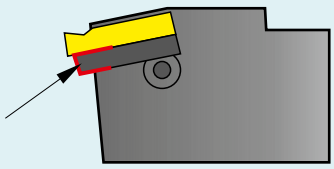
Setting the correct inclination angle.

❷



Protection for the insert seat.

❸



Support for the cutting edge.

Determination of the necessary inclination angle using the formula

Metric: $\alpha \approx \frac{20 \times P}{D}$

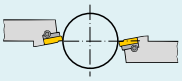
Inch: $\alpha \approx \frac{508}{D \times \text{threads per inch}}$

Example:
Thread pitch **P = 2**
Nominal Ø **D = 30 mm**

$\alpha \approx \frac{20 \times 2}{30} = 1.33°$

Result:
The suitable shim has a 1.5° inclination.
Machining can be performed using the standard shim.

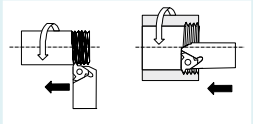
Determination of the necessary inclination angle using the diagram



also applies when overhead toolholders are used

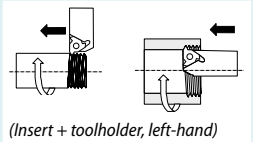
Feed towards chuck

Right-hand thread



(Insert + toolholder, right-hand)

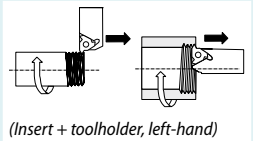
Left-hand thread



(Insert + toolholder, left-hand)

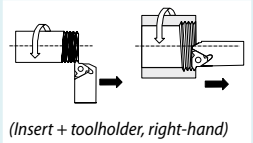
Feed towards tailstock

Right-hand thread

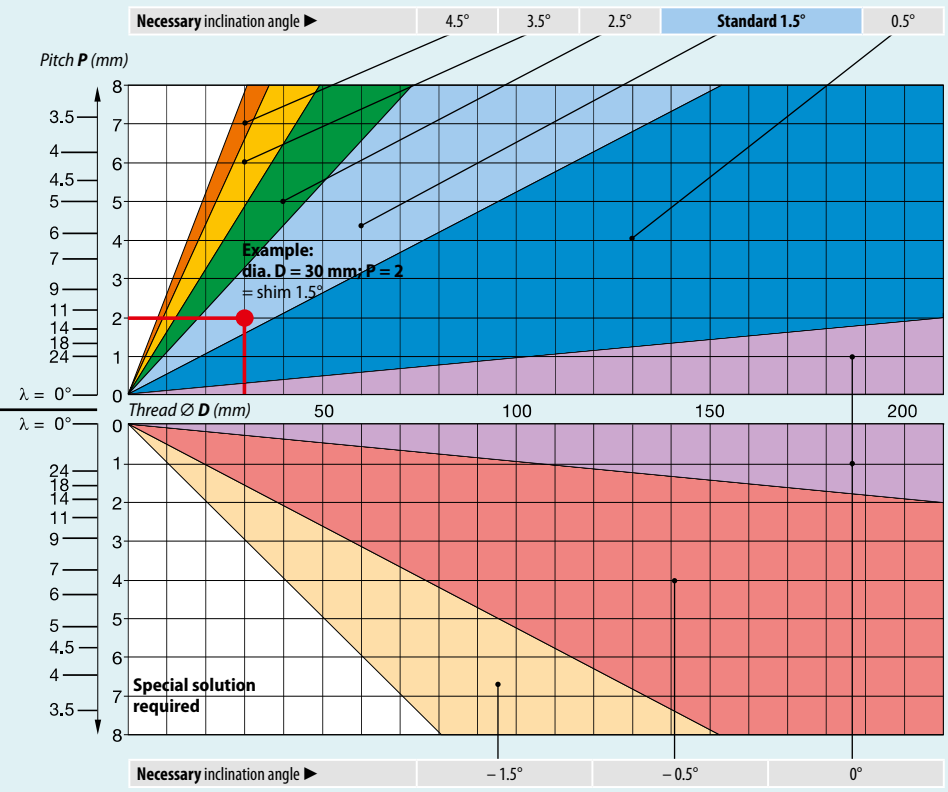


(Insert + toolholder, left-hand)

Left-hand thread

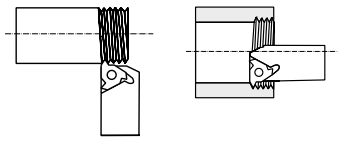


(Insert + toolholder, right-hand)



Garant Shims with correction angle

Note: Toolholders that have no fixed angle of inclination are supplied as standard with a 1.5° shim.



For external (ER/EL) and internal (IR/IL) threads

27 2600 – For right-hand external thread (ER) and left-hand internal thread (IL).
27 2606 – For right-hand external thread (EL).
27 2610/2616 – For left-hand external thread (EL) and right-hand internal thread (IR).

Application: **For the production of standard-compliant threads.** Use in conjunction with threading inserts No. 270700 – 271900 and 271970 – 271980.

Hoffmann Group

Regrinding service

Good for you

It is already worth it from the first regrind. Overall, you can expect amazing savings of up to 85 %. And all with the original regrind quality, to the original geometry and on the original production machines. There are no compromises here.
In addition: Of course, we also provide you with excellent regrinding results for your third-party brands!

Good for the environment

Reusing the tool saves valuable resources and avoids unnecessary waste. In addition, the shorter transport distances also ensure a reduced CO_2 footprint. A good contribution to environmental protection.

Just good all round

Pick-up and delivery service, coating service, measurement certificate service, labelling service.
An all-round worry-free package has never been so easy – and with maximum cost transparency.
For you, this means the highest precision and reliability as quickly as possible.

27

It's that simple.

1

Request and have a system box picked up.

2

We check and process your tools.

3

You will receive your tools back ready for use.

Garant Eco parting-off tools for single-sided GARANT parting-off inserts

With Eco cooling directly on the cutting edge and additional flank face cooling.
27 3564 – With coolant transfer for toolholders from other manufacturers (e.g. EWS).

Suitable for:
Size 19/2,2; 19/3,1 – Toolholder No. 274093 or 319132 – 319133 (VDI toolholder).
Size 26/2,2–32/5,1 – Toolholder No. 273893; 273894; 274095; 274097 or No. 319132 – 319133 (VDI toolholder).

Application: For deep grooves and parting off large diameters.
Spare part: Blanking screw No. 279828 size 2.
Sealing disc No. 279830 size 1.
Attention: Please order the assembly key No. 279940 separately.

Garant Parting-off tool for parting-off inserts No. 273656 – 273749

Suitable for: Toolholder No. 273984 – 273994 or 319132 – 319133 (VDI toolholder).
Application: In conjunction with parting-off inserts No. 273656 – 273749.
Attention: Please order the assembly key No. 279940 separately.

Note: From 19.5 mm groove depth (up to groove width 3 mm) and from 24.5 mm groove depth (from groove width 4 mm) the second cutter comes into contact with the workpiece. This can lead to scoring. If necessary, use single-ended grooving inserts No. 273656 – 273670.

Garant Assembly key for fitting inserts

It is simple to change the inserts – precisely and in seconds.
With just a single turn of the GARANT assembly key, you can position the insert exactly where you want it.
Many potential applications for GARANT grooving tools.

One key – one system!

- GARANT parting-off blade.
- GARANT tool holder for radial grooving.
- GARANT tool holder for face grooving.
- GARANT boring bar for grooving (No. 27 4170 – 27 4171).

Garant Toolholder with removable clamping strip

Higher clamping forces dues to larger clamping screws in the clamping strip.

Application: Allows grooving tools of different makes to be used.
Can be used even on toolholders with concealed clamping elements.

Garant Eco grooving tools, strengthened

With Eco cooling directly on the cutting edge and additional flank face cooling.
27 3854/3855 – With coolant transfer for toolholders from other manufacturers.

Suitable for:
27 3864 – Toolholder No. 273893; 273894; 274095; 274097 or VDI toolholder 319133.
27 3865 – Toolholder No. 273893; 273894; 274095; 274097 or VDI toolholder 319132.
27 3864 Size 26/3; 26/3L – 319140 – 319141 size RR or LR.
27 3865 Size 26/3; 26/3L – 319140 – 319141 size RL or LL.

Attention: Please order the assembly key No. 279920 separately.

Note: Due to its design, it is not compatible with EWS toolholders No. 319148 and 319149.

29Y 27 9920	Assembly key	eShop

Garant Eco grooving tools

With Eco cooling directly on the cutting edge and additional flank face cooling.
27 3856 – With coolant transfer for toolholders from other manufacturers (e.g. EWS).

Suitable for:
Size 26/2–32/6 – Toolholder No. 273893; 273894; 274095; 274097 or VDI toolholder No. 319132 – 319133.
Size 19/2; 19/3 – Toolholder No. 274093 or VDI toolholder No. 319132 – 319133.

Application: For deep grooves and parting off large diameters.

Spare part: Blanking screw No. 279828 1.

Attention: Please order the assembly key No. 279920 separately.

Note: From 19.5 mm groove depth (up to groove width 3 mm) and from 24.5 mm groove depth (from groove width 4 mm) the second cutter comes into contact with the workpiece. This can lead to scoring. If necessary, use single-ended grooving inserts No. 273656 – 273670.
Size 19/2; 19/3 – Set consisting of 2 blades each with its own seating.

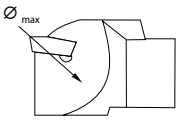
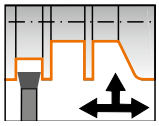
Garant Grooving toolholder with t_{max} ≤ 12.5×groove width w

Made of high-tensile tool steel (> 1300 N/mm²). In conjunction with the convex insert clamping, the system achieves very high resistance to axial and radial cutting forces and thereby significantly increases the surface quality and productivity.

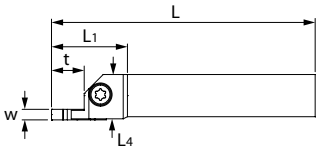
Note:	Maximum Ø = limited workpiece Ø due to the tool type. From 19.5 mm groove depth (up to groove width 3 mm) and from 24.5 mm groove depth (from groove width 4 mm) the second cutter comes into contact with the workpiece. This can lead to scoring. If necessary, use single-cutter grooving inserts No. 273656 – 273670.

Optimum washing of the cutting edge with coolant.





Up to groove depth 37.5 mm = 12.5 × w



Eco grooving toolholder with groove depth t_{max} ≤ 12.5×groove width w

Size 16/3 – 8×w
Size 20/3; 25/3 – 10×w
Size 20/3L; 25/3L – 12.5×w **(groove depth up to 37.5 mm)**

Note:	Coolant transfer only possible in conjunction with GARANT Master Eco toolholders No. 319006 – 319136.

27 3835

Positioning within the scale ensures precise coolant transfer.

Garant Grooving toolholder with t_{max} = 5×groove width w

Made of high-tensile tool steel (> 1300 N/mm²). In conjunction with the convex insert clamping, the system achieves very high resistance to axial and radial cutting forces and thereby significantly increases the surface quality and productivity.

Note: From groove width 6 mm at t_{max} (5×groove width), the second cutter comes into contact with the workpiece. This can lead to scoring. Reliably free of scoring up to t = 24.5 mm.

27 3830

Positioning within the scale ensures precise coolant transfer.

Eco grooving toolholder with groove depth t_{max} = 5×groove width w

Note: Coolant transfer only possible in conjunction with GARANT Master Eco toolholders No. 319006 – 319136.

Garant Grooving toolholder 45°

Application: For free turning operations directly up to a shoulder, to create free undercuts for threading and grinding work.

Note:
- **ØD$_{min}$ = 30 mm** (at w = 3).
- **ØD$_{min}$ = 35 mm** (at w = 2).
- Use only with a full radius groove turning insert No. 273735 – 273739.
- No standardised undercut according to DIN 509.

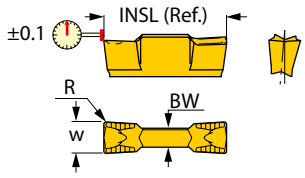
HELIGRIP inserts

Suitable for: Blade carrier No. 273766 – 273768.

Application: For axial and radial grooving, parting off and internal machining.
(HELIGRIP inserts for axial grooving application only compatible with HFHR holder).

Note: The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.



Chip breaker Y

Positive chip breaker. Soft cut. Reduced cutting forces.

Parting off tools for parting-off inserts No. 278029 - 278036

All sizes with just one insert seat for two groove widths (3 mm and 4 mm). For grooving inserts No. 278029 – 278036.

Attention: Parting-off insert can be clamped only in combination with base holders No. 278008 and 278009. The parting-off insert is easily replaced only by releasing the front screw on the clamping strip of the base holder.

Note: From 14 mm groove depth onwards the second cutter comes into contact with the workpiece. This can lead to scoring.

PENTA GROOVING SYSTEMS FOR A WIDE RANGE OF APPLICATIONS.

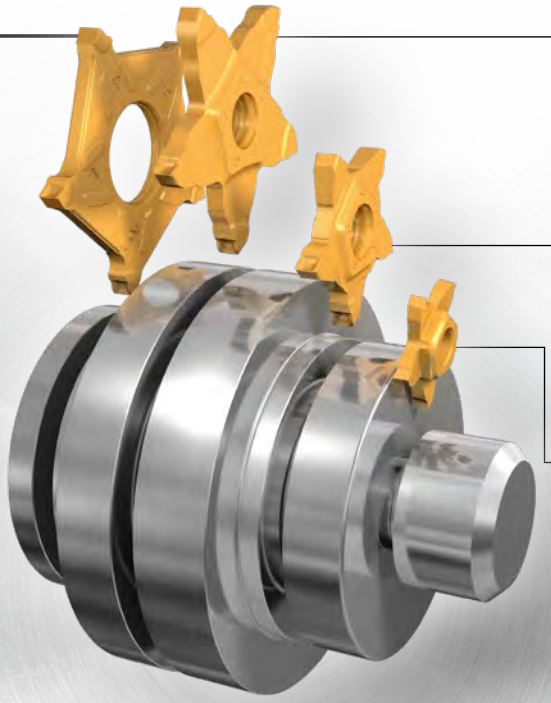
5 cutting edges on one insert.
Best ratio of price per cutting edge.

FLASHPENTA
ECO PARTING AND GROOVING LINE

PENTACUT
PARTING & GROOVING LINE

FLASHPENTA

- For all machine types.
- Groove width: 2– 3 mm.
- Groove depth: ≤ 20 mm (in 3 graduations).



PENTACUT 34

- For universal lathes and multi-spindle machines.
- Groove width: 1.5– 4.0 mm.
- Groove depth: ≤ 10 mm.

PENTACUT 24

- For universal lathes and multi-spindle machines.
- Groove width: 0.5– 5.0 mm.
- Groove depth: ≤ 6.5 mm.

PENTACUT 17

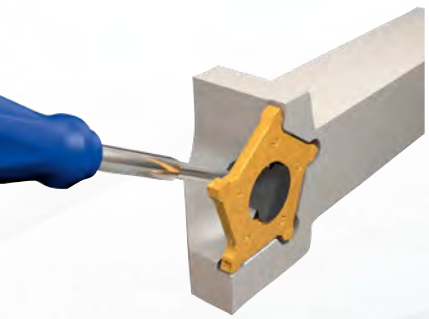
- For sliding headstock lathes and multi-spindle machines.
- Groove width: 0.25– 3.18 mm.
- Groove depth: ≤ 4 mm.

FLASHPENTA.
The highly economical system.

- Excellent flatness and surface quality when parting off.
- Inserts can be mounted on both right and left holders.
- Universal tool material grade IC908 for a wide range of applications.
- Dovetail clamping of the inserts in the holder for maximum stability and easy handling.

PENTACUT.
The highly variable system.

- A wide range of geometries is available (e.g. thread turning and grooving of retaining ring grooves).
- A wide range of tool materials is available.
- A wide range of chip breakers ensures effective chip clearance, even in demanding materials.
- Stable and precise tangential clamping of the inserts in the holder.
- Clamping or loosening possible on both sides of the holder.



PENTACUT PENTA 17 toolholder

Suitable for: Inserts No. 273956 – 273959.

Application: For flush work on workpiece shoulders for groove widths of 0.25 mm – 3.18 mm.

Note: For right-hand toolholders use right-hand inserts, for left-hand toolholders use left-hand inserts.

27 3950

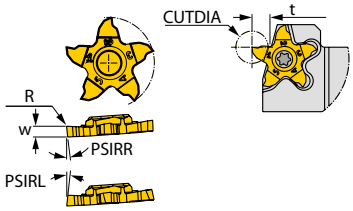
PENTACUT PENTA 17 inserts

Suitable for: Toolholder No. 273950 – 273951.

Application: Universal system for machining small components. For parting off, grooving, threading and reverse turning.

Note: The minimum order quantity corresponds to one pack unit quantity (VPE) or a multiple thereof.



Chip breaker P

Application: For parting off and grooving. Positive chip breaker. Soft-cutting.

Garant Boring bars for axial grooving

- Carbide insert screwed on to the end face, positive force transmission due to end face serrations.
- Insert change is very easy to handle.

27 3969 – Elliptical profile for very high flexional resistance.
27 3966/3969 – Low-vibration carbide shank with soldered steel head and hardened insert seat.

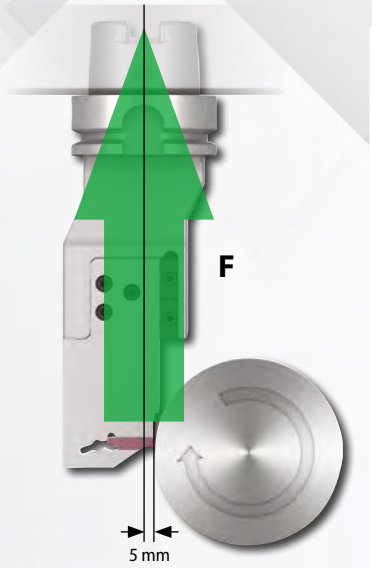
Garant VARIO PLUS ECO Y GROOVING – ADVANTAGES

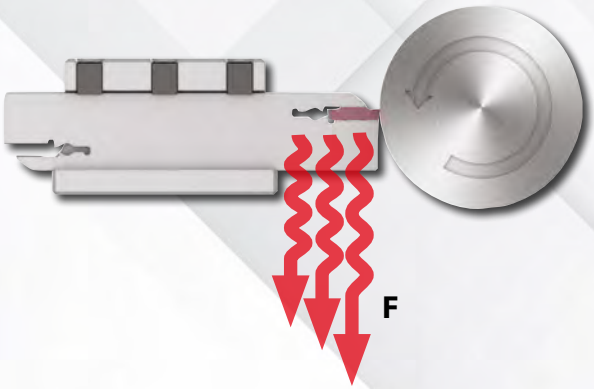
Parting off with Y-axis

- Favourable application of force directly into the spindle.
- Vibrations are significantly reduced – better surface quality.
- High feed rates are possible.
- Prerequisite: Y-axis on the machine.
- Ideal for multi-task machines.
- Peak height offset in y = -5 mm.



Standard parting-off method

- Can be used for all machines.
- Attractively priced.
- Unfavourable application of force at larger groove depths.
- Susceptible to vibrations.



Garant Vario Plus Eco toolholder HSK-T / PSC

Optimised system stability thanks to multiple screw clamping and form fit.

Suitable for: Vario plus Eco blade carrier.

Supplied with: Including assembly screws.

Garant

Heavy-Duty blade carrier for face grooving

For grooving inserts No. 275021 – 275048.

Application: In conjunction with toolholder No. 274004 or alternatively with adapter No. 274003 and suitable toolholder for parting-off tools.

Attention: Without clamping screws (these are supplied with the toolholders). The assembly key No. 279940 1-3 must be ordered separately.

Note: D_1 = minimum Ø for the first groove / D_2 = maximum Ø for the first cut.
D_2 = 999 in the size designation corresponds to theoretically infinite.

Cut knurling tool for 2 knurls

RGE30° 2×AA | RGE45° BL/R15°

Advantage:
- Low vibration.
- Adjustment scale and synchronous adjustment spindle for adjusting the workpiece Ø.
- Reduced set-up times leading to reduced unit costs.
- Clearance angle correction of the knurls.
- Increased wear resistance due to specially hardened surface.
- For higher feed rates and cutting speeds.

Roller burnishing tools

Advantage: Surface quality of up to Rz 2 µm possible.
Application: For machining materials up to 45 HRC. Ideal for machining the surfaces of complex, continuous contours.

Note: For detailed application recommendations please see the instruction handbook supplied.

Holder for burnishing roller

29 1412 – Fixed tool head (grub screw in the shank for clearance angle correction).
29 1415–1417 – Swivelling tool head (adjustment range ± 90°).

Application:
29 1412 – For roller-burnishing of **uninterrupted contours** (convex, concave, cylindrical and conical).
29 1415–1417 – For roller-burnishing of **uninterrupted contours** (convex, concave, cylindrical and conical) and flat faces. Suitable even for applications up to the collar.

Supplied with:
Size 10-16 – Shank size 10 including shank adaptor 12 mm × 12 mm and 16 mm × 16 mm.
Size 16-25 – Shank size 16 including shank adaptor 20 mm × 20 mm and 25 mm × 25 mm.

Attention: Burnishing rollers must be ordered separately!

Note: Check potential interference contours (x dimension of the roller = 2.5 mm).

Burnishing rollers

Advantage: Inexpensive alternative to diamond burnishing up to a surface quality of Rz< 2 µm.

Note: Use the largest possible radius.

29 1419

Tip radius	mm	0,4	0,6	1
29M 29 1419	Burnishing roller	eShop	eShop	eShop

Smoothing tool with diamond smoothing tips

Technology

The pressure of the burnishing roller produces a material flow from the near-surface material layer which was produced using machining. The roughness peaks are levelled and the roughness reduced. This creates a smooth and resistant surface.

Impressive advantages

- Complete machining in a single clamping
- Cost-effective (compared to diamond burnishing)
- Surface quality of up to Rz 2 µm possible.
- Adjustable (head or clearance angle), which enables different contact points between burnishing roller and workpiece.

Impressive advantages

- Suitable for materials up to a tensile strength of 1500 N/mm2 (approx. 45 HRC).
- Suitable only under restricted conditions (not recommended) for hardened and high-strength materials.
- The recommended maximum workpiece diameter is approx. 4 × Ø of roller = 60 mm.
- Pre-turning surface of at least Rz = 10 µm (Ra = 1).
- Workpiece radial run-out < 0.03 mm.
- Infeed always in the workpiece.
- The selected curvature of the roller should be greater than the radius of the pre-turning plate.

Diamond burnishing tools

Advantage: Surface quality R_z < 1 µm possible.
Application: For machining materials up to 65 HRC.
Ideal for machining the surfaces of complex, continuous contours.

Note: For detailed application recommendations please see the instruction handbook supplied.

Holder for diamond burnishing tips

29 1401 – Fixed tool head (grub screw in the shank for clearance angle correction).
29 1405–1407 – Swivelling tool head (adjustment range ± 90°).

Application:
29 1401 – For burnishing of **uninterrupted contours** (convex, concave, cylindrical, conical).
29 1405–1407 – For burnishing of **uninterrupted contours** (convex, concave, cylindrical, conical) and flat faces. Suitable even for applications up to the collar.

Supplied with:
Size 10-16 – Shank size 10 including shank adaptor 12 mm × 12 mm and 16 mm × 16 mm.
Size 16-25 – Shank size 16 including shank adaptor 20 mm × 20 mm and 25 mm × 25 mm.

Attention: Diamond burnishing tips must be ordered separately!

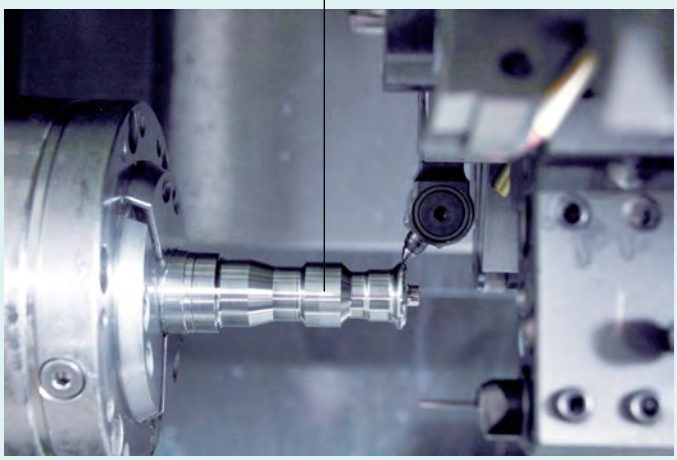
Burnishing tool with diamond burnishing tips

Technology

The pressure of the diamond burnishing tip produces a material flow from the near-surface material layer which was produced using machining. The roughness peaks are levelled and the roughness reduced. This creates a smooth and resistant surface.

Burnished with diamond
R_z = 0.4 µm



Impressive advantages

- Smoothing of extremely hard materials up to 65 HRC with surface quality Rz < 1 µm possible.
- Simple and flexible application. Different shank sizes using adapters.
- 8 possibilities for using diamond tip. Easy change of position by means of indexing.

Standard application values

The technology values for the burnishing process are based on the finishing process, which was used to pre-machine the workpiece.

L R

ECOROLL

Smooth rolling tool, single roller

For use on CNC and conventional lathes.
With symmetrical structure – can be used universally as right-hand or left-hand version.

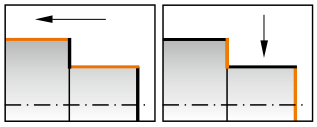
Advantage: Surface quality R_z < 1 µm possible.
Feed rates up to 1 mm/rev possible (external machining).

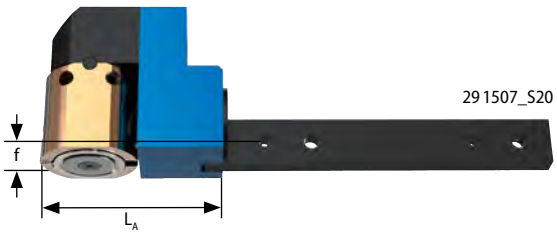
Application: For mechanical surface finishing.
For machining all metallic materials up to a tensile strength of 1400 N/mm² and a hardness of up to 45 HRC.

Note:
- Other shank connections on request.
- Detailed technology recommendations can be found in the instruction manual.

For cylindrical external or flat faces (recommended ∅ range 5 mm – 50 mm)

Application: For use on sliding headstock lathes.





Shank mounting type		S10	S12	S16	S20
29F **29 1507**	Smooth rolling tool EG3T-3 **universal**	(eShop)	(eShop)	(eShop)	(eShop)

Roll ∅	mm	3			
Shank square	mm	10×10	12×12	16×16	20×20
Suitable for: ∅ range (recommended)		5 mm – 50 mm			

For cylindrical external or flat faces (recommended ∅ range 10 mm – 100 mm)

Advantage: Consistent results due to continuous measurement of the rolling force.

Supplied with: Two spare rolls built in the cage.

Note: Tool tray for the respective machining surface depends on the type of turret (star/disc).

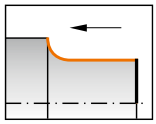
Suitable for: Ø range (recommended)		from 50 mm					

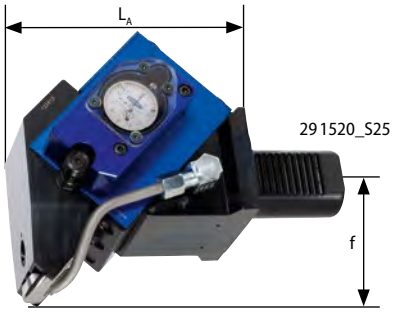
For external surfaces with transition radii

Advantage: Consistent results due to continuous measurement of the rolling force.

Recommendation: For external surfaces with subsequent radius up to plane surface.

Note: Roller radius = 2.5 mm. Machinable workpiece radii from 4 mm to 12 mm.





Shank mounting type		S25	S32	VDI40	VDI50	PSC63	PSC80

Roll Ø	mm	40					
Shank square	mm	25×25	32×32	–	–	–	–
Suitable for: Ø range (recommended)		from 35 mm					

For external surfaces and holes

High flexibility due to external and internal use.
Independent of diameter (within the recommended range) for internal machining.

Advantage: Consistent results due to continuous measurement of the rolling force.

Application: For external Ø from 10 mm and internal Ø from 32 mm.

Supplied with: Two spare rolls built in the cage.

Ø range inside (recommended)		32 mm – 150 mm					

ECOROLL Smooth rolling tool, multi-roller

For use on CNC and conventional lathes, milling and drilling machines.
Stepless adjustment in µm (adjustment range from -0.05 mm to +0.1 mm).

Advantage: **Specially for production use.** Maximum productivity due to **feed rates** from 0.05 mm – 0.3 mm **per roll**.
Surface quality R_z < 1 µm possible.
Automatic release during tool withdrawal avoids damage to smooth rolled surface.

Application:
- For mechanical surface finishing.
- For machining all metallic materials up to a tensile strength of 1400 N/mm² and a hardness of up to 45 HRC.
- Clockwise machining.
- Up to tolerance class IT8.
- For holes up to Ø 49 mm.

Note: From Ø 10 mm optionally with internal cooling.

Marking tool for marking roller No. 43

Return spring system with replaceable segments. Flexible and with adaptable shank.

Advantage: Marking up to the collar is possible.

Recommendation: Optionally, item No. 291990 Box can be ordered for the secure storage of interchangeable segments/character sets.

Note: The maximum number depends on the respective character width.
Marking roller with Ø 30mm: Fitting at least 17 segments possible.
Marking roller with Ø 50mm: Fitting at least 29 segments possible.

Marking tool set

Suitable for:

29 1920/1925 – Interchangeable segments No. 291950 – 291952 and character sets No. 291940 – 291942.
29 1930/1935 – Interchangeable segments No. 291954 – 291956 and character sets No. 291945 – 291947.

Supplied with:

29 1920/1925 – Marking tool with shank size 8, shank adapter for shank sizes 10, 12 and 16, start segment and end segment.
29 1930/1935 – Marking tool with shank size 16, shank adapter for shank sizes 20 and 25, start segment and end segment.

Attention: Check that the combination of tools and segments in correct.

Note: Range stock parts and for further versions available on request.

Garant Keyway broaching toolholder

Attention: Always use the minimum pre-drill ∅ to match the slot width (e.g. for slot width 14 mm, minimum pre-drill ∅ = 38.22 mm).

Note:
- Individual holder sizes are for different slot widths. In such cases, where possible, always use the optimum combination of holder and cutting insert (identical size) for maximum stability.
- For lathes without Y-axis, please use eccentric bush No. 290391– 290393 for exact setting of the Y-coordinate.
- For machining centres, use the alignment aid No. 290397 and a dial indicator to check the spindle orientation.

Garant Cutting inserts for keyway broaching toolholder

With TiN coating.
Suitable for regrinding.

Application: For producing slots according to DIN 6885, DIN 138 and factory standards.
For slot widths with tolerance JS9, use cutter inserts with tolerance H7.

Note:
- Special sizes (slot widths) available on request.
- Detailed application values can be found in our application ToolScout.

Suitable for/ v_c [m/min]	Alu plastics	Alu	Alu cast > 10 % Si	< 500 N	< 750 N	< 900 N	< 1100 N	< 1400 N	< 55 HRC	< 60 HRC	< 65 HRC	< 67 HRC	INOX < 900 N	INOX > 900 N	Ti > 850 N	GG(G)	CuZn	Graphite GRP CRP

Cutting insert with chamfer

Note: From slot width 16 mm it is essential to perform two passes. The first pass must be performed for approx. half the slot width (e.g. 10 mm for a desired slot width of 18 mm). For the first pass it is recommended that a cutter insert without chamfer (290370 – 290379) is used, as this means greater slot depths are possible.

Garant Eccentric bush for keyway broaching toolholders and profile slotting toolholders

With adjustment range from a maximum of ± 0.5 mm.
A graduation on the scale corresponds to 0.03 mm.

Suitable for: Keyway broaching and profile slotting toolholders No. 290330 – 290359.

Application: For fine adjustment of groove slotting toolholders and profile slotting toolholders on lathes without a Y axis.

duMONT Keyway broaches (push broaches) for one-off and series production

HSS

Application: **For production of keyways to DIN 6885.**
Supplied with: Broaches including the necessary shims.

Note:
- Broaches for high tensile materials, increased number of passes or special applications available (on request).
- After first and second of three passes, back the broach off slightly – the broach will then align itself.
- Coated broaches and **inch size** broaches available on request.
- Size 28, 32 and 36 available on request, on short lead times.

HSS

duMONT Keyway broaches for a single pass

Sizes 4B1 to 8C1 additionally with 45° edge breaker.
This deburrs the sharp edges of the groove.

Application: For efficient cutting of splines to DIN 6885 in a single pass.

Note:
- **For size 2A please use part No. 290405 2A.**
- Fits P9 and H9 available on request.
- After 1/3 and 2/3 of the pass, back the broach off slightly – the broach will then align itself.

Guide bushes for keyway broaches

Size 6A–22C1 – With collar.
Size 24C1–90F1 – Without collar.

Application: **Push broaches with identification mark A and guide bushes with identification mark A can be used together.**
The same applies to the other markings. So that the broach can run through to its full height and can drop back again freely, the guide bush must be inserted into the press bedplate at the same time as the workpiece is threaded through.

Note: Further sizes available on request.

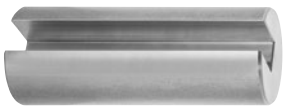
29 0415

Guide bushes with collar from 6 – 22 mm ∅.

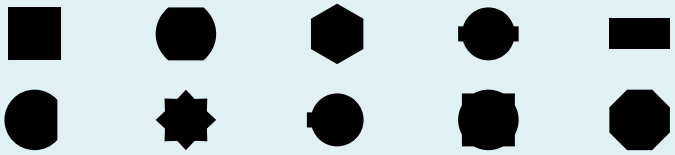


29 0415

Guide bushes from 24 – 90 mm ∅.

Special broaches – ask for our questionnaire!

Examples of profiles for special push broaches:



Square (No. 29 0426) and hexagon (No. 29 0431) push broaches are available from supplier's stock.
Further sizes are available at short notice from manufacturer's stock.

We will be happy to prepare a quotation for you.

Garant Profile broaching (tumbling)

Hexagon, square, Torx® and Torx Plus® profiles – created in seconds:

Internal profile

Preparation (bore)
To protect the cutting edge and reduce the machining time, pre-drill the workpiece with the largest possible bore diameter.

Guide values bore Ø d (AF plus oversize):

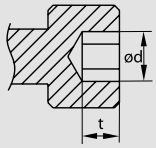
Width across flats AF	Positive oversize	
mm	Hexagon %	Square %
2 to 25	+ 0 to + 2	+5

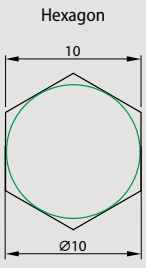
Guide values for bore Ø d (Torx® / Torx Plus®):

Torx®	Hole Ø	Bore oversize 0.00 –	Torx®	Hole Ø	Bore oversize 0.00 –
mm	mm	mm	mm	mm	mm
TX5	1	+0.05	TX27	3.75	+0.1
TX6	1.4	+0.05	TX30	4.2	+0.1
TX7	1.55	+0.07	TX40	5	+0.15
TX8	1.9	+0.1	TX45	5.8	+0.2
TX10	2.2	+0.1	TX50	6.7	+0.2
TX15	2.6	+0.1	TX55	8.2	+0.2
TX20	3	+0.1	TX60	9.9	+0.2
TX25	4	+0.1			

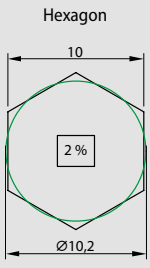
Torx Plus®	Hole Ø	Bore oversize 0.00 –	Torx Plus®	Hole Ø	Bore oversize 0.00 –
mm	mm	mm	mm	mm	mm
IP6	1.5	+0.1	IP20	3.2	+0.1
IP8	2	+0.1	IP25	3.6	+0.1
IP10	2.3	+0.1	IP30	4.5	+0.1
IP15	2.7	+0.1	IP40	5.4	+0.15

The guide value of the hole depth t for a blind hole is:
t = desired profile depth × factor 1.5.
A counterbore of the bore facilitates centring of the broach (countersink Ø ≙ the minimum external Ø of the profile).
At larger bore diameters the bore contour remains slightly visible on the faces. This does not cause any technical or qualitative restriction on the functionality of the profile.





Bore Ø min.



Bore Ø max.

External profiles

Preparation (workpiece)
To protect the cutting edge and reduce the machining time, pre-turn the workpiece to the smallest possible diameter.
It is essential that the workpiece diameter is less than the radius diameter of the hexagonal profile.

Guide values for workpiece Ø D (circle Ø less oversize):

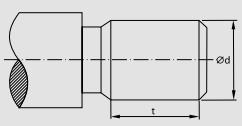
Width across flats AF	Material	Negative oversize Hexagon
mm	N	%
3 to 14	< 750	– 1 to – 7
3 to 14	< 900	- 3 to - 10

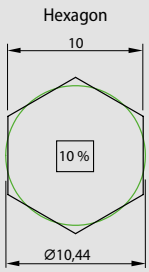
For hexagonal profiles a guide value for the diameter of the circumscribed circle is:
Ø D = Width across flats × factor 1.16.

Example calculation of radius diameter calculation (see diagram below):
Pre-turning Ø D_{min} = 10 mm × 1.16 – 10 % = 10.44 mm
Pre-turning Ø D_{max} = 10 mm × 1.16 – 1 % = 11.484 mm

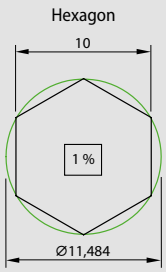
The guide value for the pre-turning length t is:
t = desired profile length × factor 1.2 to 1.4.

A rear chamfer or an undercut promotes chip breaking.
A chamfer on the workpiece facilitates centring of the cutter insert.





Pre-turning Ø min.



Pre-turning Ø max.

Profile broaching process (tumbling)
Concentric movement (tumbling) of the cutting edge quickly generates the desired profile in a single pass, with good process reliability.
When machining on a CNC lathe, start at a low speed (n ≈ 100 rpm – 200 rpm) and high feed rate (f ≈ 0.1 mm/rev – 0.3 mm//rev).
After a machining depth of approx. 0.5 mm, increase the feed rate and speed as shown in the table on page 922.
Retract at a higher feed rate.

Notes
For maximum stability, always select the largest possible toolholder.
Cooling lubrication is necessary – because of the small depth of the profile, external cooling is sufficient.

Garant Profile broaching holder for internal profiles

Optional extras: Positioning aid (No. 293000) and pin wrench (No. 293006).

Note:
- Caution: Always use appropriate slotting tool Ø.
- Other shank connections on request.

Holder with plain and Morse taper shank

29 3029/3079 – Suitable for automatic lathes.
Suitable for: CNC and conventional machines.
Optional extras: Drive-out tang for MT shanks can be ordered under No. 293008 in the sizes MT2, MT3 and MT4.

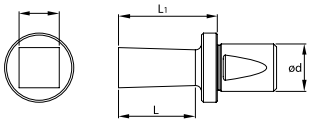
29 3054



Square socket metric

With TiN coating.

Suitable for: Profile broaching holder No. 293020 – 293079.

Note: The manufacture of square profiles > 9 mm is recommended only in easily machined materials (higher rate of material removal).

Adapter

Suitable for:

Size 16 – Profile broaching holderfor internal profiles No. 293026, 293033, 293076.

Size 12 – Profile broaching holderfor internal profiles No. 293023, 293030, 293073.

Application: With this adapter, cutter inserts for outer profiles can also be used in conjunction with a profile broaching holder for inner profiles.

Note: For reasons of stability, use the profile broaching holder No. 293102 on higher batch sizes or materials that are difficult to machine.

Turning toolholder with bore

Slotted in opposite direction; the round boring bar shank is clamped firmly and securely with only little pressure. All external surfaces are machined square.

Application: For holding turning tools with a round shank No. 296300, 296400, 297120 and for round tool bits No. 295020.

Clamping technology

You can obtain the whole catalogue range of these brands from the Hoffmann Group – just ask us for it!

Chucks, arbors, accessories

30 939 – 1026

Lathe chucks, quick-change toolholders, VDI toolholders, driven tools

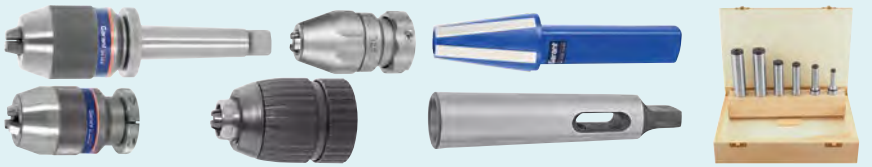
31 1027 – 1080

Lathe centres, face drivers, collets, clamping heads, toolholders for indexable inserts

32 1081 – 1104

Tapping chucks, quick-change chucks, tap extensions

33 1105 – 1113



Drill chucks, arbors, taper sleeves, taper cleaners, slitting saw arbors

34 1113 – 1121

Edge finder, 3D edge finder, shrink-fit unit, pre-setting device, data clip, tool fitting aid, cleaning aids

35 1122 – 1143

Zero-point clamping system, NC vices, centring vices, clamping rails, 5-axis vices, sets of parallels

36 1144 – 1216

Machine clamps, toggle clamps

37 1217 – 1252

Load lifting magnets, permanent magnet tables, electro-permanent magnets, demagnetisers, vacuum clamping technology

38 1253 – 1261

Manuals, coolant, cleaning tools, magnetic grippers and bar holders

Machining accessories 1262 – 1283

Pictograms

Standard

DIN 69871 | ISO 7388-1 | DIN 2080 | JIS B6339 | ISO 7388-2 | DIN 69893 | ISO 12164-1 | DIN 6359

DIN 6358 | DIN 69882-2 | ISO 26623-1 | ISO 26622-1 | ISO 12164-3

Tool arbors
Shank type,
Gripper groove, and interface correspond to this DIN.

DIN 69872 | ISO 7388 | MAS 403 | ISO 7388-3

Pull studs correspond to this DIN.

ISO 10897 | ISO 15488-A | ISO 15488-B | DIN 2084

ER / OZ collets / clamping nuts and accessories correspond to this DIN.

Standard

Manufacturer's standard

Coolant feed

Note: **CS** = **C**oolant **s**upply / **ICS** = **I**nternal **c**oolant **s**upply / **CCB** = **C**ooling **chan**nel **b**ores.

Form A | Form E | Form F

For ISO tapers: no central coolant supply available (the arbor is **not** bored through).
For hollow shank taper: central axial coolant supply available via a coolant pipe.
Form F: no central coolant supply available, only through bored.

Form AD

Conforms to standard JIS B 6339-2: Form JD -> Central coolant feed through the tightening bolt. A pull stud with through-hole is required for this purpose.
DIN ISO 7388-1 (formerly DIN 69871): Form AD -> Central coolant feed through the tightening bolt. A pull stud with through-hole is required for this purpose.

Form ADB

Conforms to the new standard DIN ISO 7388-1 (former DIN 69871): form ADF -> inner coolant feed optionally through the centre (form AD) and via the collar (form AF).
Conforms to standard JIS B 6339-2: Form JD/JF -> inner coolant feed optionally through the centre (form JD) and via the collar (form JF).
DIN 69871: Coolant supplied centrally (= form AD) or laterally via the collar (= form B).

≤50 bar

Internal coolant supply limited to maximum 50 bar, or suitable for internal coolant supply.

Arbors with cooling channel bores and **closable threads.**

Arbors with cooling channel bores **cannot be plugged.**

Radial run-out

≤2µm | ≤3µm | ≤5µm | ≤6µm | ≤10µm | ≤20µm | ≤30µm | ≤50µm

Radial run-out of various arbors and short drill chucks.

Run-out of ER collets: HP = High precision ER collet **(2 µm)** FAHRION
ER standard collet **(5 µm)** FAHRION
ER standard collet **(10 µm)** HOLEX

≤3µm HP+CP | ≤6µm ER+CP | ≤10µm OZ+CP | 6µm ER+HDC | 3µm HP+HDC

System radial run-out FAHRION ER precision collet chuck **Centro P (CP) and HDC in connection** with FAHRION ER collets **(HP or standard)** or **OZ collet (type 444E).**

Balancing speed

G 6.3 8000 min^{-1} | G 6.3 12000 min^{-1} | G 6.3 15000 min^{-1} | G 2.5 18000 min^{-1} | G 6.3 20000 min^{-1} | G 2.5 25000 min^{-1} | G 2.5 30000 min^{-1} | G 2.5 40000 min^{-1} | G 6,3 18000 min^{-1}

Balancing quality of various arbors: e.g. precision balanced to G2.5 at 25000 rpm.

Application

HSC — Arbor suitable for High speed machining (high speed cutting)

HPC — Arbor suitable for high performance cutting.

IP 67 — Tool dust-tight and watertight.

≤14 Nm — Maximum tightening torque (M_{Dmax}).

Form A — **For HSK arbors:**
– Application in machining centres.
– Torque transmission by 2 drive slots at the end of the taper.

Form E — **For HSK arbors:**
– Used for high frequency spindles (e.g. woodworking machines)
– Rotationally symmetrical, without drive slots.
– Torque transmission by friction.

Vibration damping

Prepared for zero point clamping system

BT-DC — BT arbors with double contact

EH — Energy harvesting – battery-free tool.
Power supply for the pressure indicator by rotation of the point.
Power is obtained from the integral generator.

Hoffmann Group Connected Suite

Bluetooth interface

HCT — Compatible with the HCT mobile app

Tool clamping

Colour code examples:

In groups 30, 31, 32, 33 and 35 these products and tool groups have SK40 tapers.
This ensures that SK40 arbors, clamping fixtures in group 35 and UNIT storage systems in group 97 are compatible.

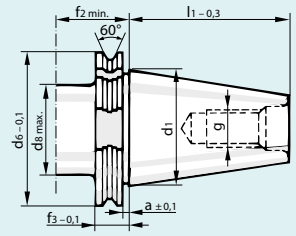
Shank versions for milling machines and machining centres

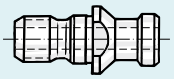
The extremely high tool quality protects the machine spindle and extends the service life of the tools.
Tolerance is tighter than required by DIN: Taper accuracy to AT 3 (max. 3 µm), surface roughness RZ < 0.001 mm.

Note: See page 985 for information on hollow shank interfaces (HSK).

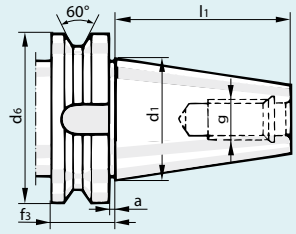
Shanks for NC machines and machining centres

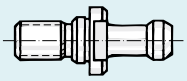


Form A: Without through hole.
Form AD: With through hole **for central coolant feed.**
Form B/Form AF: **For lateral coolant feed** via the tool collar.
Form ADB/Form ADF: **For central and lateral coolant feed** via the tool collar.



Pull studs acc. to DIN ISO 7388-3 (previously DIN 69872) or ISO 7388/II type B or with snap ring groove.





Pull studs to JIS standard.

DIN 6359 | ISO 7388-1 | Form ADB | G 2.5 25000 min^{-1} | ≤3µm | HPC | HSC

Garant Performance milling chucks – DIN ISO 7388-1 (formerly DIN 69871)

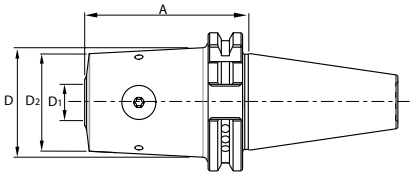
- All shanks hard turned.
- Supplied with 4 table cooling channel bores.

Advantage:
- No risk of the cutter being pulled out, not even a tug.
- Optimised external contour – vibration-damping behaviour.
- Pleasant handling thanks to the differential thread.
- Breakage of the milling cutter shank is improbable.
- Precision version.

Application: For clamping tools with side drive flats to DIN 1835 Form B and DIN 6535 Form HB. Best suited for TPC milling or high feed rate applications. No risk of the cutter being pulled out, more precise radial run-out, **process reliability!**

Optional extras: Pull studs (PS) No. 308600 – 308806, PS wrenches No. 308820 – 308835.

30 0395



- *Spring in the base body presses the milling cutter or HB shank into the correct position.*
- *Contact piece on the tightening screw holds the milling cutter in the HB face.*

Garant Side lock arbor (Weldon), extra-slim

Cylindrical holder with Weldon shank and a clamping screw for clamping the tool. ∅6 mm through hole for **internal cooling** provided.

Advantage: Low interference contour due to slim design and variation of the clamped lengths.

Application: For clamping tools with side flat to DIN 1835 B and DIN 6535 HB.

Supplied with: Including insert screw No. 300416.

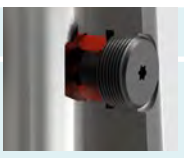
Garant Performance milling chuck

GARANT milling chucks (precision version) ensure the following advantages:

- No risk of the cutter being pulled out, not even when jerked
- Optimised external contour → vibration-damping behaviour.
- Thread self-locking, even when subjected to micro-vibrations.
- Pleasant handling thanks to the differential thread.
- Nasty surprises in the form of shank breakages are virtually fully excluded.



Contact piece on the tightening screw holds the milling cutter in the HB face.

Spring in the base body presses the milling cutter or HB shank into the correct position.

ISO 7388-1 | Form ADB | G 2.5 25000 min⁻¹ | ≤3µm | HSC | HPC

Garant HiRunER precision ER collet chuck – (formerly DIN 69871)

30 0642

Mini – size 11M/16M (extremely slim design).
30 0643

External and internal tapers are ground. All shanks are hard turned for smooth running.
Including RFID/Balluffchip bore, high-performance clamping nut up to 25000 rpm.

Advantage:
- 3 µm radial run-out with a 2 µm clamping nut, 6 µm radial run-out with a 5 µm clamping nut.
- **Extremely strong holding force** (up to **factor 2**better than the standard ER chuck).
- **Vibration reduction effect** due to 2-part clamping nut (size 11M and 16M 1-piece).

Supplied with: **Precision clamping nut.**

Optional extras: Pull studs (PS) No. 308600 – 308806,
PS wrenches No. 308820 – 308835,
ER chuck keys No. 309757, 309758 (for 11M and 16M);
ER collets Fahrion No. 308901 – 309434.
ER collets No. 308901 – 309432,
hook spanner No. 628400 or torque wrench No. 309749 or 628520.

Note:
- Clamps only nominal ∅ up to shank ∅ tolerance h 10.
- Do not use the clamping nut in combination with a sealing washer.
- Use in combination with Fahrion collets.
- The blue design ring must be removed for Fahrion HP 2µm ER collets.

G 2.5 25000 min⁻¹ | HSC

Collet chuck, extra slim – (formerly DIN 69871)

- Taper ground internally and externally.
- Shanks hard turned.
- With RFID/Balluffchip bore.
- The collet is clamped by a threaded connection from behind **through** the chuck, **no clamping nut required!**

Advantage: Extremely slim design permits machining of components where access is difficult, e.g. during toolmaking and mould-making.
30 0772 – Large working range and optimised contour for reduced vibration. Cooling with the collet by the tool or along the shank.

Application: For clamping tools with plain shank to DIN 6499.

Supplied with: Clamping screw and wrench with T-handle.

Optional extras: Pull studs (PS) No. 308600 – 308806,
PS wrenches No. 308820 – 308835,
GARANT collets No. 309563,
ALBRECHT collets No. 309572 – 309573.

ISO 7388-1 | G 2.5 25000 min^{-1} | HSC

FAHRION® Precision ER collet chuck – (formerly DIN 69871)

- Taper ground internally and externally with RFID/Balluffchip bore.
- **Concentricity and repetition accuracy 3 µm** at 3×D, maximum 50 mm when using a HP precision collet.
- **HDC = Heavy Duty Chuck,** a mount specially designed for rough machining.
  A reinforced chuck body ensures better stability and plenty of radial stiffness.
  Taper ground internally and externally. Ball-bearing clamping nut with trapezoidal-shaped fine thread for optimum tightening torques and clamping forces, reduces vibrations that occur.
- **Very high clamping forces** due to the collet fully seated in the chuck and coated clamping nut.
- **Vibration damping** due to the element collet and mass of the chuck.
- **Alternatively for CENTRO P -> without seals,** with ER clamping nut CP No. 309655
  or sealed system with ER clamping nut CP for HP sealing rings No. 309665 in conjunction with HP sealing rings No. 309666 – 309668 (for internal coolant supply or as a dirt trap).

Advantage: Patented optimum seating of the collet, double guides, trapezoidal thread and low-friction coated clamping nut amalgamate when clamped into a sturdy unit, thus ensuring a very high degree of rigidity and precision.

Application: For high precision clamping of tools with plain shank.
HDC especially well-suited for roughing (including TPC milling) and finishing operations and machining of high-tensile or tough materials.

Supplied with:

30 0686–0689 – **Without clamping nut**.

30 0694/0697 – **Supplied with ball-bearing clamping nut.**

Optional extras: Pull studs (PS) No. 308600 – 308806,
PS wrenches No. 308820 – 308835,
precision ER collets for HP No. 309368 - 309381 and for taps No. 309402 – 309419 (not for Holex).
ER clamping nuts CP No. 309655; 309665,
ER clamping nut HDC No. 309657,
HP sealing rings No. 309666 – 309668,
CP roller bearing wrench No. 309754; 309756,
HDC roller bearing wrench No. 309745; 309756.

Note:
- **Clamps only nominal ∅ up to shank ∅ tolerance h10.**
- Use in combination with Fahrion collets.
- 30 0694/0697 – Not compatible with CP clamping nut.

Please order CP clamping nuts separately

Face mill arbor extension

Mounting spigot, bore and all contact surfaces are ground at the collar.

Application: For flexible extensions of face mill arbors.
Economy alternative to expensive custom-made arbors.
3 options for use: short (45 mm) or long (70 mm) extension
or maximum extension by combining two short extensions (2×45 mm).

Supplied with: Suitable lock screw.

Optional extras: Special toggle spanner No. 309840.
30 1105 – Replacement screw No. 301107.

Adapter face mill / collet ER

Bore, contact face at collar and ER collet seat ground, body hard turned for best radial run-out and balancing characteristics. For the shortest possible overhang with internal clamping nut (optionally for use with a sealing washer). Through-bored tightening screw for through-coolant supply.

Application: Very flexible and economical solution, turns any face mill arbor into a collet chuck.
Supplied with: Supplied with ER clamping nut (internal), tightening screw.
Optional extras: Sealing rings No. 309630; 309635.

Note: Matching clamping nut No. 309621.

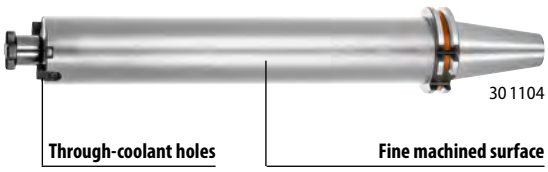
Face mill arbors, vibration-damped – DIN ISO 7388-1 (formerly DIN 69871)

- Taper shank, spigot, and all contact surfaces are ground at the collar.
- With RFID / Balluffchip bore.
- Larger collar contact face.

Supplied with: Cutter lock screw and drive dog.

Optional extras: Pull studs (PS) No. 308600 – 308806,
PS wrenches No. 308820 – 308835,
Special toggle spanner No. 309840.
Milling cutter lock screws No. 309860; 309861.

Note: Further sizes on request.



High-performance version with embedded heavy metal core

Advantage: The heavy metal core specially matched to the arbors gives optimum machining results even with long overhangs:

- Saves time, because allows use of the maximum machining parameters.
- Smooth running and thus perfect surface quality results.
- Saves costs, because tool life is increased.
- Less vibrational stress on the machine headstock.

Note: Balance quality G 6.3 dependent on the maximum operating speed.

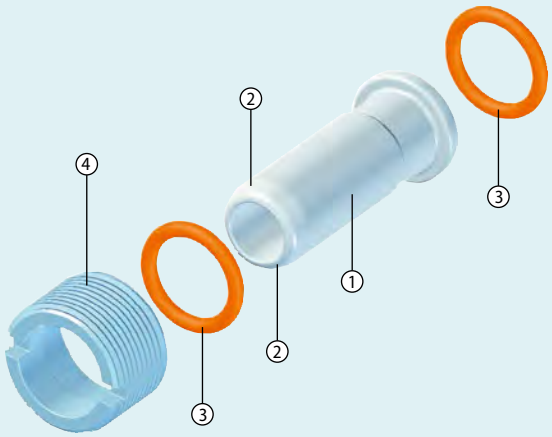
Garant Accessories for HSK arbors

HSK coolant pipe – a small component with a big effect!

When tools are changed thousands of times per day it is important that the interface between coolant pipe and machine spindle seal remains clean and, above all, that it maintains process reliability.



No. 30 9880 can be found on page 1025.

① Fine polished surface, hardened and burnished.

② Two polished transition radii.

③ Full freedom of movement thanks to **two coolant-resistant Viton® O-rings.**

④ Hardened threaded sleeve **with rolled, high-compression thread flanks.**

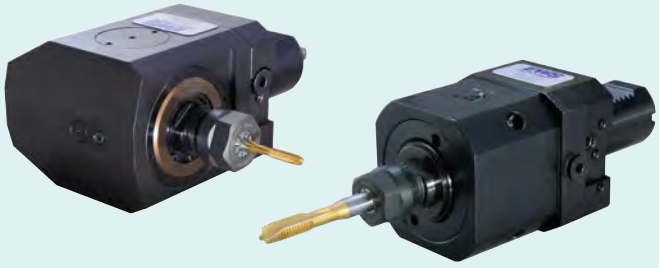
EWS Tool Technologies TAPMATIC – high-speed tapping with reversing kinematics

Characteristics
- Automatic reversal of direction of rotation
- Length compensation in tension
- Constant cutting speed

Advantages
- Reduces the machining time by up to 50 %
- Increases the production capacity
- Increases the working life of the tap 3-fold
- Protects the machine (avoiding spindle changeover)
- Saves around 75 % power consumption of the machine due to elimination of braking and starting up



Availability
- **RSR radial tapping heads**
  Tapping range M4.5 – M12
  Speed 2500 rpm (i = 1.5: 1)

ASR axial tapping heads
Tapping range M4.5 – M12
Speed 2500 rpm (i = 1: 1)

Garant VG1 pre-setting device

Pre-setting device VG1
(No. 35 4760)

Functional storage plates

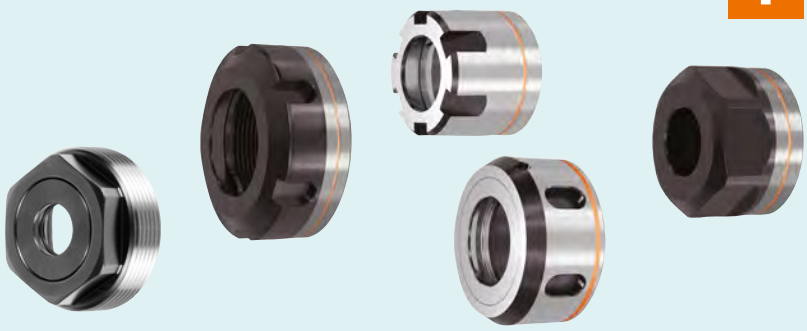
Base body with granite cover

Tidy pipe routing

Garant HOLEX High-performance clamping nuts for ER collet chucks

Only the perfect interaction of collet chuck, collet and **high-quality clamping nut** can ensure good system concentricity.

- High-quality processing of clamping nuts.
- Optimum hardness to reduce wear.
- Ground thread.
- Balanced nuts.
- Extremely simple handling: quickly clicking collets in and out.



≤3µm HSC

Garant Screw-in adapter

For clamping tools with plain shanks.

Suitable for: Tool arbors for threaded copy mills.
Supplied with: Clamping nut
Optional extras: ER collets No. 308901 – 309430.
ER collet clamping nuts No. 309650; 309652.

Note: Suitable extension and reducer under No. 301358; 301359.

Garant Slim hydraulic chuck 3° – (formerly DIN 69871)

Detailed dimensions can be found in the eShop.

- **Extremely slim design** (3° contour)
- Processed surface structure.
- With RFID/Balluffchip bore.
- Axial length adjustment possible.
- Shanks hard turned.
- Reducing adapters can be used.

Application: Especially for tool and mould making.
Wherever reduced interference contours are required.
For drilling, reaming, and milling.
For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Pull studs (AB) No. 308600 – 308806,
AB pull stud wrenches No. 308820 / 308835,
Reducing adapters No. 302135 – 302187.

Hydraulic chuck, version HT (High Torque) – (formerly DIN 69871)

- Very high total rigidity due to optimised design.
- With RFID/Balluffchip bore.
- Axial length adjustment (adjustment 10 mm) available.
- Flexible due to use of reducing sleeves.

Application:
- For drilling, reaming and for **light and heavy-duty machining** when milling.
- Maximum transmissible torque **550 Nm,** version HT (High Torque).
- **Ideal damping characteristics,** resulting in optimum surface finishes, increased tool life and spindle protection.

Optional extras: Pull studs (PS) No. 308600 – 308806,
PS wrenches No. 308820 – 308835,
Reducing adapters No. 302135 – 302187.

Note: Caution in the case of extra-long tools and TPC machining.

Slotted reducing adapter with cooling – for HD chuck

With cooling channel slots.

30 2150 – Flexible length pre-setting possible through movable intermediate piece.

Application:
- For drilling, reaming, milling, and tool sharpening.
- Very high flexibility due to reduction in clamping diameter.
- Very high torque guarantees a higher volume of metal removal compared to direct clamping.
- Concentricity ± 5 µm (system accuracy at 3×D).
- Concentricity ± 2 µm (for reducing adapter).
- Can be used in all commercially available hydraulic chucks.

Detailed dimensions can be found in the eShop.

EROGLU Präzisionswerkzeuge Pull-out wrench for reducing adapters – for HD chucks

Suitable for: Reducing adapters ∅ 12, 20 and 32 mm No. 302135 – 302187.

Application: For easy removal of the reducing adapters from hydraulic chucks. Can be used for all popular HD reducing adapters.

30 2183

for reducing adapters ∅		mm	12-32
30N 30 2183	Pull-out wrench for reducing adapters		–

WTE Hydraulic chuck extension

With axial length adjustment. Flexible due to use of reducing sleeves.

Application: Suitable for hydraulic chucks and collet chucks.

Optional extras: Reducing sleeves No. 302135 – 302187.

Hydraulic chuck (HD chuck) – (formerly DIN 69871)

- **Radial run-out ≤ 3 µm.**
- With RFID / Balluffchip bore.
- Axial length adjustment possible, 10 mm adjustment track.
- Flexible due to use of reducing sleeves.
- Coolant pressure up to 80 bar.

Application: For drilling, reaming and finish milling.

Supplied with:

30 2026/2038/2032/2045/2085/2058/2052 – Hexagon socket drive with T-handle.

Optional extras: Pull studs (PS) No. 308600 – 308806, PS wrenches No. 308810 – 308830, size 12; 20; 32: Reducing adapter No. 302135 – 302187.

30 2026/2038/2032/2043/2053/2052 – Back stop screws for direct clamping / use of reducing sleeves on request.

Detailed dimensions can be found in the eShop.

GARANT Master Chuck hydraulic chuck slim – (formerly DIN 69871)

- **Slim design** (4.5° contour, 1 to 1 shrinking contour according to DIN 69882-8).
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10 mm.
- Reducing adapters can be used.
- **Temperature resistant up to 120°C for 4 hours.**
- **Allows for up to 10x more clamping operations compared with a standard hydraulic chuck.**
- Very low tightening torque of the clamping screw – easy handling.
- **Patented new hydraulic clamping system – reliable, durable premium concentricity.**

Application: Especially for tool and mould making.
Wherever reduced interference contours are required.
For drilling, reaming and milling. For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Pull studs (AB) No. 308600 – 308806,
AB pull stud wrenches No. 308820 / 308835,
Reducing sleeves No. 302135 – 302187.

30 2070

Same properties as shrink-fit chucks
- *Accuracy*
- *Extremely slim, identical interference contour*

Advantages over shrink-fit chucks
- *Better damping*
- *Simpler to use*
- *Flexibility (through reducing adapters)*
- *No shrink-fit units required (costs, energy consumption)*

GARANT Master Chuck hydraulic chuck performance – (formerly DIN 69871)

- Particularly suitable for highly dynamic milling applications.
- **Optimised outer contour using FEM** (finite element method) –> robustness thanks to max. rigidity, longer tool life, higher metal removal rate, suitable for all machining strategies.
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10 mm.
- Reducing adapters can be used.
- **Resistant to temperatures up to 170°C for 4 hours.**
- **Allows for up to 10x more clamping operations compared with a standard hydraulic chuck.**
- Very low tightening torque for the clamping screw – easy handling.
- **Patented new hydraulic clamping system – reliable, durable premium concentricity.**

Application: Universally designed for roughing and finishing work.
For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Pull studs (AB) No. 308600 – 308806,
AB pull stud wrenches No. 308820 / 308835,
Reducing sleeves No. 302135 – 302187.

Maximum metal removal rate, with maximum precision!

Garant Shrink-fit chuck, vibration damped – (formerly DIN 69871)

- High-temperature steel.
- Integrated length adjustment of the tools.
- For HSS and solid carbide tools.
- Shanks hard turned (smooth cutting action!).
- With RFID / Balluffchip bore.
- With coolant channel bores and threads that can be sealed.
- With tapped holes on each side for balancing screws.
- **Reinforced version/contour.**
- **Polished surface.**
- **Specially mounted carbide core in the shrink-fit chuck body.**

Advantage:
- **Vibration-damping.**
- **Better workpiece surface finish.**
- **Optimised tool life.**
- **Increased process reliability.**
- **Lower corrosion tendency due to polished surface.**

Application: For clamping tools with plain shank (h6 shank tolerance). Suitable for inductive, contact and hot air shrink-fit units.

Optional extras: Pull studs (PS) No. 308600 – 308800.
PS wrenches No. 308820 – 308835.
Shrink-fit chuck extensions No. 302410 – 302419.
Shrink-fit units, accessories No. 354210 – 354450.
Balancing screws set No. 309906 size 180.

30 2207_6

Vibration damping

30 2210

Carbide core drilled through, mounted in an aluminium cylinder – optimum damping characteristics!

Shrink-fit chuck 4.5°– DIN ISO 7388-1 (formerly DIN 69871)

- High-temperature steel.
- Size 3 -5 for carbide, from size 6 for HSS and carbide.
- All shanks hard turned (for smooth running!).
- With RFID / Balluffchip bore.

30 2230 – **Ultra-short version** for more stability and less vibration.

30 2230/2252/2257/2259/2267/2292/2308/2313 – With **coolant hole bores** tapped for plugging. Coolant hole bores at clamping ∅ D1: 3, 4 and 5 mm cannot be plugged.

30 2237/2261/2287 – Premium version: nickel-plated version with 4 pluggable **cooling channel bores.** Integral tool length adjustment (adjustment track 10 mm).

30 2251/2254 – Glass bead blasted.

Application: For clamping tools with parallel shank to h6 tolerance. Suitable for inductive, contact and hot-air shrink units.

Supplied with:

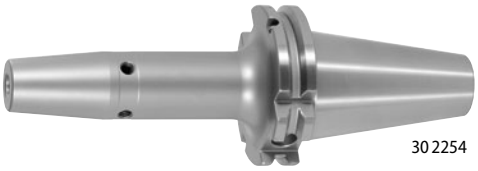
30 2237/2261/2287 – 4 × M3 nozzle screws.

Optional extras: Pull studs (PS) No. 308600 – 308800. PS wrenches No. 308820 – 308835, Shrink-fit chuck extensions No. 302410 – 302419. Shrink-fit units, accessories No. 354210 – 354450, balancing screws set No. 309906 size 180.

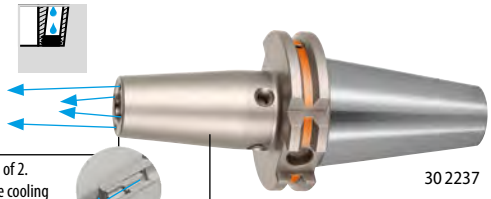
Note:

30 2230 – No length adjustment available.

30 2252



30 2254



30 2237

Optimised cooling concept

- 4 cooling channel bores instead of 2.
- Different approach angles of the cooling channel bores.
- With 4 nozzle screws to optimise the coolant pressure and alignment of the coolant stream.

Corrosion protection

Special surface treatment.

ISO 7388-1 | Form ADB | G 2.5 25000 min^{-1} | ≤3µm | HSC | HPC

Garant Shrink-fit chuck 4.5°, slotted – (formerly DIN 69871)

- High-temperature steel.
- With 4 cooling channel slots on the clamping hole.
- All shanks hard turned (for smooth running!).
- With RFID/Balluffchip bore.

Advantage: Improved cooling directly on the tool shank.
Facilitates the removal of small tool diameters.

Application: For holding end mills and drills with parallel shank to h6 tolerance.
Suitable for inductive, contact and hot air shrink-fitting units.

Optional extras: Pull studs (PS) No. 308600 – 308800,
PS wrenches No. 308820 – 308835.

ISO 7388-1 | Form ADB | G 2.5 25000 min^{-1} | ~3µm | HSC | HPC | h6 S-λ®

Shrink-fit chuck Power Shrink Chuck with SAFE-λOCK® – (formerly DIN 69871)

Shrink-fit chuck for very high metal removal rates during high-performance cutting (HPC).
The optimised design combines excellent stiffness with vibration damping.
This protects the machine, spindle and tool.

- **Safe-Lock tool pull-out protection** prevents the tool being pulled out accidentally.
- Higher metal removal rate due to higher speeds, higher feed rates and greater cutting depth.
- Shorter machining times.
- Runs more smoothly, which improves the surface quality and protects the tool, spindle and machine.
- With tapped holes for balancing with screws.
- With pluggable Cool Jet holes.
- With length adjustment screw (adjustment path 10 mm).

Application: For clamping tools with parallel shank to h6 tolerance **with Safe-Lock ground surface.** Suitable for all types of shrink-fit unit such as inductive, contact and hot air shrink-fit units.

Optional extras: Pull studs (PS) No. 308600 – 308800, PS wrenches No. 308820 – 308835. Shrink-fit units, accessories No. 354210 – 354450, balancing screws set No. 309906 size 180.
For milling cutters with Safe-Lock clamping flat, see solid carbide milling cutters.

Note: Other shrink-fit chucks with **Safe-Lock** available on request.

Detailed information on Safe-Lock can be found under milling.

Key characteristics:
❶ High concentricity (< 0.003 mm).
❷ Low tendency to vibrate due to optimised outer contour.
❸ Slim design at the tip.
❹ Very rigid shank.
❺ Cool-Jet as standard (can be re-locked).
❻ Safe-Lock.

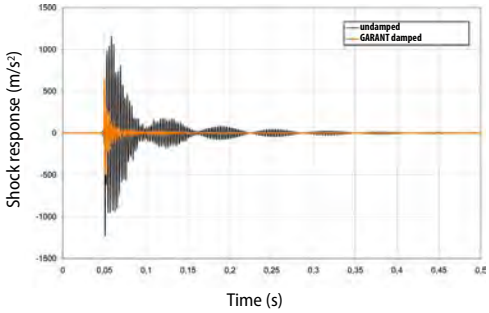
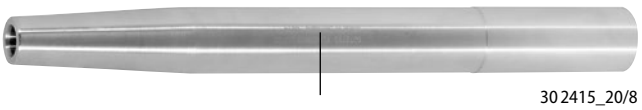
≤80 bar

Garant Vibration-damped shrink-fit chuck extension 3°

Shank bored through for internal coolant supply (ICS) up to maximum 80 bar.
Including length adjustment backstop screw.
A **carbide core embedded** in the adapter damps the tendency to vibrate.
Maximum permissible speed 8,000 rpm.

Advantage:
- Avoid vibrations in the clamping system.
- Better workpiece surface finishes.
- Increased tool service lives.





30 2415_20/8

Carbide core embedded in polymer.

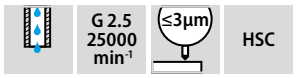
SCHUNK TRIBOS-Mini SVL polygonal clamping extension



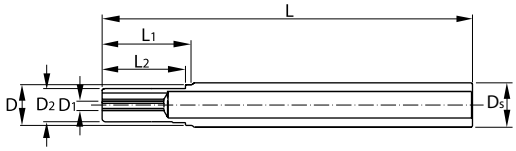
By using TRIBOS SVL extensions, standard cutting tools can be used instead of expensive special tools.
The extension with concentricity of < 0.003 mm and a slender interference contour can be combined with a wide variety of chucks. The TRIBOS SVL extensions have already been proven for use in the medical, watch and jewellery industries, as well as in the automotive and electronics industries.

Function: The TRIBOS SVP clamping devices make the polygon-shaped clamping diameter of the extension round and the tool shank can be easily inserted. If the pressure on the clamping diameter decreases, it becomes polygonal again and clamps the inserted tool shank reliably and accurately.

Advantage:
- **Optimised interference contour** – ideal for bores in low-lying areas, e.g. in fixture construction.
- **Axial length adjustment** – length adjustment in the range of 0.01 mm accuracy, with adjustment travel of 10 mm.
- **For the smallest diameters from 0.3 mm** – economical for the most delicate machining operations without special tools.
- **Flexible to use** – suitable for hydraulic chucks and ER collet chucks.
- **All commercially available shank types can be mounted (HA, HB, HE).**
- **Excellent vibration damping** – avoidance of micro break-outs, top workpiece surfaces, less stress on the headstock, increase to tool life and thus reduction in costs.
- **High speeds possible** – up to 52,000 rpm.

Supplied with:
30 2381 – 5 × extension No. 302383 (size of your choice),
1 × clamping device No. 302384 size 9,
1 × HOLEX activation wrench No. 627501 size 6.

30 2381



❶ ***Clamping diameter similar to polygon.***
The polygon-shaped clamping diameter of the toolholder is rounded due to the clamping device TRIBOS SVP and the appropriate application of pressure.
❷ ***Clamping diameter becomes round.***
The tool shank can now be inserted easily.
❸ ***Insert shank.***
If the pressure on the clamping diameter is released, it takes on its polygonal shape again.
❹ ***Tool clamped.***
The inserted tool shank is clamped reliably and with repetition accuracy.

Garant GARANT MASTER CHUCK

With the GARANT Master Chuck, we have expanded the **possible application areas enormously.**
Here is an overview of the new features and improvements in both versions.

GARANT Master Chuck Performance.

Maximum performance.
With extra long service life.

- **Even easier to use.**
  Thanks to the new position of the clamping screw.
- **Higher temperature resistance.**
  The new, patented bushing technology reduces the oil volume, improving stability and safety when subject to high temperature influences.
- **Improved application/distribution of the forces.**
  Thanks to new, patented bushing technology.
- **Significantly less manual tightening force required.**
  Thanks to special mechanics, less torque is required whilst simultaneously achieving the highest possible clamping force.
- **Longer tool life.**
  Up to 10 x more clamping cycles than conventional chucks.

30 2195

30 2070,
30 2073

GARANT Master Chuck Slim.

Top form.
For best accessibility.

- **Very easy to operate.**
  No shrink-fit unit required.
- **Better surface quality.**
  As vibrations are minimal.
- **Quicker machining.**
- **Higher clamping force.**
  Compared to conventional hydraulic chucks.
- **Protect your employees.**
  No injuries caused by the shrink fitting process.
- **Higher temperature resistance.**
  Thanks to new, patented bushing technology.

ER collet chuck – JIS B6339 (MAS-BT)

External and internal taper ground.

30 2745/2752/2755/2765/2828 –
- All shanks hard turned (for smooth running!). Balancing quality G2.5/25,000 rpm.
- Clamping nut balanced for HSM (G2.5/25,000 rpm).
- Optimum wear characteristics and torque transmission due to the coated precision clamping nut.

30 2747/2757/2767/2817/2827 –
- All shanks fine bead blasted. Balancing quality G6.3 / 18,000 rpm.
- High-quality precision clamping nut.

30 2750/2760/2780/2800/2830 – All shanks burnished.

Application: For clamping tools with parallel shank in collets to **DIN 6499 Form A and B.**

Supplied with: ER clamping nut.

Optional extras: ER collets No. 308881 – 309434,
ER chuck keys No. 309680 – 309745 or No. 613300.
Pull studs (PS) No. 308760 – 308802.
Pull stud wrenches No. 308820; 308835.

Note: Matching clamping nut No. 309580 or 309610.

Garant HiRunER Precision ER collet chuck – JIS B6339 (MAS-BT)

External and internal tapers are ground. All shanks are hard turned for smooth running.
Including RFID / Balluffchip bore, high-performance clamping nut (up to 25000 rpm).

Advantage:
- **Excellent concentricity in the system** (chuck + collet + clamping nut), 3µm radial run-out with a 2µm collet, 6µm radial run-out with a 5µm collet.
- **Extremely strong holding force** (up to **factor 2** better than the standard ER chuck).
- **Vibration reduction effect** due to 2-part clamping nut.

Application: For clamping tools with plain shank in collets to DIN 6499 – Form A and B.

Supplied with: **Precision clamping nut**.

Optional extras: Pull studs (PS) No. 308760 – 308802,
PS wrenches No. 308820 – 308835,
ER chuck keys No. 309757, 309758 (for 11M and 16M);
ER collets Fahrion No. 308901 – 309434.
ER collets No. 308901 – 309432,
hook spanner 628400 or torque wrench 309749 or 628520.

Note:
- Clamps only nominal ∅ up to shank ∅ tolerance h 10.
- Do not use the clamping nut in combination with a sealing washer.
- Use it in only combination with Fahrion collets.
- The blue design ring must be removed for Fahrion HP 2µm ER collets.

HiRunER → the collet is fully seated in the chuck → higher retention forces! → better concentricity!

Standard ER chuck → Collets are not inserted 100% into the chuck.

Garant ER collet chuck, ultra-short – JIS B6339 (MAS-BT)

Taper ground internally and externally. **Ultra-short type with internal precision clamping nut.**
Best suited to working in restricted working areas, with higher stability.

Application: For clamping tools with parallel shank in collets to DIN 6499 – Form A and B.

Supplied with: ER clamping nut (internal).

Optional extras: ER collets No. 308881 – 309434,
pull studs (PS) No. 308760 – 308802,
PS wrenches No. 308820 – 308835.

Note: Matching clamping nut No. 309621.

FAHRION® Precision ER collet chuck – JIS B6339 (MAS-BT)

- Taper ground internally and externally with RFID/Balluffchip bore.
- **Concentricity and repetition accuracy** 3 µm at 3×D, maximum 50 mm when using a HP precision collet.
- **HDC = Heavy Duty Chuck,** a mount specially designed for rough machining. A reinforced chuck body ensures better stability and plenty of radial stiffness. Taper ground internally and externally. Ball-bearing clamping nut with trapezoidal-shaped fine thread for optimum tightening torques and clamping forces, reduces vibrations that occur.
- **Very high clamping forces** due to the collet fully seated in the chuck and coated clamping nut.
- **Vibration damping** due to the element collet and mass of the chuck.
- **Alternatively for CENTRO P -> without seals,** with ER clamping nut CP No. 309655 **or sealed system** with ER clamping nut CP for HP sealing rings No. 309665 in conjunction with HP sealing rings No. 309666 – 309668 (for internal coolant supply or as a dirt trap).

Advantage: Patented optimum seating of the collet, double guides, trapezoidal thread and low-friction coated clamping nut amalgamate when clamped into a sturdy unit, thus ensuring a very high degree of rigidity and precision.

Application: For high precision clamping of tools with plain shank. HDC especially well-suited for roughing (including TPC milling) and finishing operations and machining of high-tensile or tough materials.

Supplied with:

30 2896 – **Supplied with ball-bearing clamping nut.**

30 2884–2888 – **Without clamping nut**.

Optional extras: Pull studs (PS) No. 308600 – 308806, PS wrenches No. 308820 – 308835, precision ER collets for HP No. 309368 - 309381 and for taps No. 309402 – 309419 (not for Holex). ER clamping nuts CP No. 309655; 309665, ER clamping nut HDC No. 309657, HP sealing rings No. 309666 – 309668, CP roller bearing wrench No. 309754; 309756, HDC roller bearing wrench No. 309745; 309756.

Note:
- **Clamps only nominal Ø up to shank Ø tolerance h10.**
- Use in combination with Fahrion collets.

30 2896 – ■ Not compatible with CP clamping nut.

Please order CP clamping nut separately

Heavy-duty chuck – JIS B6339 (MAS-BT)

- Low friction due to needle bearings.
- Protected with anti-corrosion coating.
- Dust-tight and watertight.
- Very high clamping force prolongs tool life and improves surface quality.
- Flexible clamping range by means of collets.

30 2861 – ■ **Clamping force up 1000 Nm at Ø 20, 4000 Nm at Ø 32.**

30 2865/2870 – ■ **Clamping force up to 1000 Nm.**

Advantage:

30 2861 – ■ Long tool life.
■ Vibration damping properties.
■ High stability due to strengthened clamping nut.

Application: For clamping tools with plain shanks.

Supplied with: Clamping nut

Optional extras: C wrench No. 628400.
Pull studs No. 308760 – 308795.

- All shanks hard turned.
- Position of the grub screw for countersinking in the indexable drill offset by 0.4 mm.
- **When tightening** the increased contact face ∅ is clamped against the front face of the arbor.
- **Better support,** allowing **higher feed rates.**
- **High concentricity** thanks to the mating surface being ground flat to 3µm.

Suitable for: All indexable drills with parallel shank to DIN 6595, Part 1.
Application: **For mounting all standard indexable drills to DIN 6595, Part 1.**
Optional extras: Pull studs (PS) No. 308760 – 308802. Replacement screws No. 309907; 309908.

Garant GARANT Master Chuck hydraulic chuck slim – JIS B6339 (MAS-BT)

- **Slim design** (4.5° contour, 1 to 1 shrinking contour according to DIN 69882-8).
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10 mm.
- Reducing adapters can be used.
- **Temperature resistant up to 120 °C** for 4 hours.
- **Up to 10× more clamping operations** possible compared to a standard hydraulic chuck.
- Very low tightening torque of the clamping screw – easy handling.
- **Patented new hydraulic clamping system** – reliable, durable premium concentricity.

Application: Especially for tool and mould making.
Wherever **reduced interference contours** are required.
For drilling, reaming and milling.
For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Pull studs (AB) No. 308600 – 308802, AB pull stud wrenches No. 308820 / 308835, Reducing sleeves No. 302135 – 302187.

30 3438

Same properties as shrink-fit chucks:
– Accuracy.
– Extremely slim, identical interference contour.
Advantages over shrink-fit chucks:
– Better damping.
– Simpler to use.
– Flexibility (through reducing adapters).
– No shrink-fit units required (costs, energy consumption).

Hydraulic chuck – version HT (High Torque) – JIS B6339 (MAS-BT)

- Very high overall stiffness due to optimised design.
- Axial length adjustment, adjustment travel 10 mm.

Advantage:
- **Maximum transmissible torque 550 Nm,** version HT (High Torque), for high process reliability.
- **Ideal damping characteristics,** resulting in optimum surface finishes, increased tool life and spindle protection.
- **Temperature resistance up to 120 °C.**

Application: **Especially for heavy-duty milling.**

Supplied with: Hexagon cross-bar wrench.

Optional extras: Pull studs (PS) No. 308760 – 308802.

Note: Caution in the case of extra-long tools and TPC machining.

GARANT Master Chuck hydraulic chuck performance – JIS B6339 (MAS-BT)

- Particularly suitable for highly dynamic milling applications.
- **Optimised outer contour using FEM** (finite element method) –> robustness thanks to max. rigidity, longer tool life, higher metal removal rate, suitable for all machining strategies.
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10mm.
- Reducing adapters can be used.
- **Temperature resistant up to 170°C for 4 hours.**
- **Allows for up to 10x more clamping operations compared with a standard hydraulic chuck.**
- Very low tightening torque of the clamping screw – easy handling.
- **Patented new hydraulic clamping system – reliable, durable premium concentricity.**

Application: Universally designed for roughing and finishing operations. For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Pull studs (AB) No. 308600 – 308802, AB pull stud wrenches No. 308820 / 308835, Reducing sleeves No. 302135 – 302187.

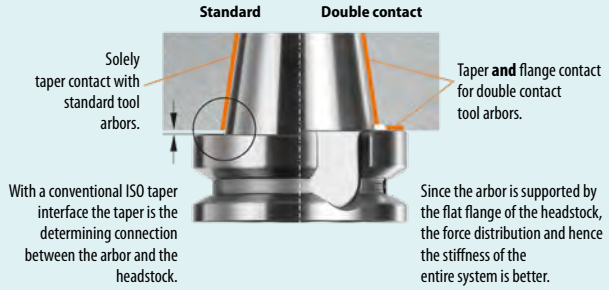
Garant Tool arbors JIS B 6339 (MAS-BT) with double contact



The double contact between the taper **and** the flat flange creates a more stable and precise clamping situation.

The result:

- Better surface quality.
- Longer tool life times.
- Consistent seating in the headstock, even at high speeds.
- Smaller radial run-out.

Send us your enquiry or ask your contact person.

JIS B6339 | ISO 7388-2 | Form AD | G 2.5 25000 min^{-1} | ≤3µm | HSC | BT-DC

Garant ER collet chuck – JIS B6339 (MAS-BT) with double contact

Taper ground internally and externally. All shanks hard turned (for smooth running!).
With RFID/Balluffchip bore.

- High-quality precision clamping nut.
- Clamping nut balanced for HSM (G2.5/25,000 rpm).
- Optimum wear characteristics and torque transmission due to the coated precision clamping nut.

Application: For clamping tools with parallel shank in collets to **DIN 6499 Form A and B.**

Supplied with: ER clamping nut.

Optional extras: ER collets No. 308881 – 309434,
ER chuck keys No. 309680 – 309720 or 613300,
ER clamping nut 309610.
Pull studs (PS) No. 308760 – 308806.
Pull stud wrenches No. 308820; 308835.

Note: Matching clamping nut No. 309580 or 309610.

Garant Combination face mill adapter – JIS B6339 (MAS-BT) with double contact

Taper shank, spigots, and contact surfaces ground on collar.
All shanks hard turned (for smooth running!). With RFID/Balluffchip bore.

Application: **With drive key** for face mills with longitudinal slot, e.g. DIN 841.
With drive ring for face mills with crosswise slot DIN 1880 and cutter heads DIN 1830.

Supplied with: Drive key, face mill drive ring, and lock screw.

Optional extras: Pull studs (PS) No. 308760 – 308806.
Special toggle spanner No. 309840.

Garant Shrink-fit chucks 4.5° – JIS B6339 (MAS-BT) with double contact

- High-temperature steel.
- Integral tool length adjustment, adjustment track 10 mm.
- Suitable for shrink fitting of HSS and carbide tools.
- All shanks hard turned (for smooth running!).
- With RFID/Balluffchip bore.

Standard: **Similar to E-DIN 69882-8, form G.**

Application: For clamping tools with parallel shank to h6 tolerance.

Optional extras: Pull studs (PS), No. 308760 – 308806,
Shrink-fit chuck extension No. 302410 – 302417,
Shrink-fit units No. 354210 – 354400.

The hollow shank interface HSK – Forms and features

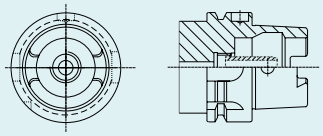
►Note: See page 938 for information on ISO taper (SK) – interfaces.

Taper hollow shanks for automatic tool change

With tool gripper groove

ISO 12164-1 (DIN 69893-1 Form A and Form T)

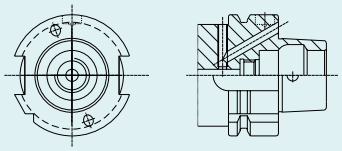
DIN 69893



- Used for machining centres, milling machines, special machines with automatic tool change.
- **Pipe for central axial coolant feed.**
- Torque transmission by **2 driving slots** at the end of the taper. **For Form T, the tolerance (dimension b5) is narrowed.**
- **2 collar grooves** for tool magazine, positioning notch.
- Bore for data carrier DIN 69 873 in the collar.

DIN 69893-2 Form B

DIN 69893

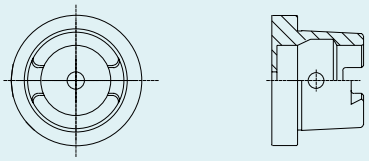


- Used for machining centres, heavy duty milling machines, lathes.
- With enlarged collar and position notch.
- **Decentralised coolant supply via the collar or central supply via the coolant pipe.**
- Torque transmission by **2 collar grooves.**
- Bore for data carrier DIN 69 873 in the collar.

Taper hollow shanks for manual tool change

ISO 12164-1 (DIN 69893-1 Form C)

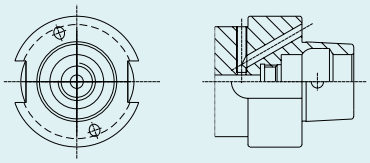
DIN 69893



- Preferred for use on spindles in transfer lines and special machines without automatic tool change or stub drill spindles and tool extensions / reducers.
- **Central axial coolant feed.**
- Torque transmission by **2 driving slots** at the end of the taper.

DIN 69893-2 Form D

DIN 69893



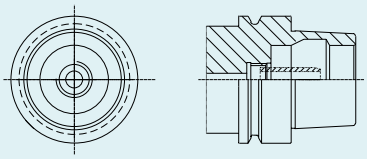
- Used in all areas which require a large flat face for even better support during manual tool changing.
- With enlarged collar.
- **Decentralised coolant supply via the collar or central supply via the coolant pipe.**
- Torque transmission by **2 collar grooves.**

Taper hollow shanks for higher speeds (HSC)

With tool gripper groove

Prelim standard (DIN 69893-5 Form E)

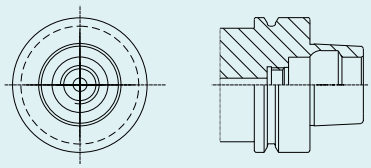
DIN 69893



- Used for high frequency spindles, woodworking machines.
- Rotationally symmetrical, **without any driving slot.**
- Torque transmission by friction.
- **Pipe for central coolant feed.**

E-DIN 69893-6 Form F

DIN 69893



- With reduced taper.
- Central coolant supply possible via a through hole – no thread for coolant pipe

The HSK interface has the following advantages compared to the ISO taper:

- High repetition accuracy when changing tools.
- Fixed axial positioning due to flat face.
- Suitable for high-speed cutting.
- No pull-studs required.

Material:

- Special steel for highly stressed components.
- Surface hardness: 58 – 62 HRC.
- **Tensile strength at core at least 1000 N/mm2.**

Garant Combi side lock arbors – slim version – ISO 12164 (DIN 69893-1)

- With **ball-jointed clamping screw for Weldon and Whistle Notch systems** (clamping flat inclination 2°).
- With RFID/Balluffchip bore.
- All shanks hard turned (for smooth running!).
- HSK mating faces machined.

Application: For clamping tools with parallel shank to DIN 1835 Form B + E and DIN 6535 Form HB + HE.

Supplied with: Ball-jointed clamping screw and through-drilled back stop screw.

Optional extras: Coolant tube No. 309880, socket wrench No. 309890, spare screw No. 309905 size M6 / M8.

Garant Whistle Notch arbors – ISO 12164 (DIN 69893-1)

Feature:
The tool is firmly clamped at the side with the clamping screw and supported at the back with the back stop screw. Clamping free of play, giving low vibration running.

- With back stop screw.
- With RFID/Balluffchip bore.

Application: For clamping tools with parallel shank and inclined clamping flat (2°) to DIN 1835 E and DIN 6535 HE.

Tool can be adjusted axially. Specially for clamping solid carbide drills. The length adjustment due to regrinding the ends of drills can be corrected by axial adjustment backscrew in the toolholder.

Optional extras: Coolant pipe No. 309880, coolant pipe wrench No. 309890

ISO 12164-1 | DIN 69882-4 | DIN 69893 | Form A | G 2.5 25000 min^{-1} | ≤3µm | HSC | HPC

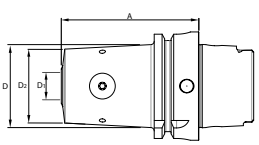
Garant Performance milling chuck – ISO 12164 (DIN 69893-1)

- With RFID/Balluffchip bore.
- All shanks hard turned.
- Supplied with 4 table cooling channel bores.

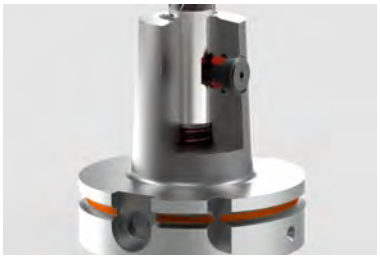
Advantage:
- No risk of the cutter being pulled out, not even a tug.
- Optimised external contour – vibration-damping behaviour.
- Pleasant handling thanks to the differential thread.
- Breakage of the milling cutter shank is improbable.
- Precision version.

Application: For clamping tools with side drive flats to DIN 1835 Form B and DIN 6535 Form HB.
Best suited for TPC milling or high feed rate applications.
No risk of the cutter being pulled out, more precise radial run-out, **process reliability!**

Optional extras: Coolant pipe No. 309880,
coolant pipe wrench No. 309890



30 4450



- *Spring in the base body presses the milling cutter or HB shank into the correct position.*
- *Contact piece on the tightening screw holds the milling cutter in the HB face.*

Garant HiRunER Precision ER collet chuck – ISO 12164 (DIN 69893)

External and internal tapers are ground. All shanks are hard turned for smooth running.
Including RFID/Balluffchip bore, high-performance clamping nut up to 25000 rpm.

Advantage:
- **Excellent concentricity in the system** (chuck + collet + clamping nut), 3 µm radial run-out with a 2 µm collet, 6 µm radial run-out with a 5 µm collet.
- **Extremely strong holding force** (up to **factor 2** better than the standard ER chuck).
- **Vibration reduction effect** due to 2-part clamping nut (one part for mini version).

Application: For clamping tools with plain shank in collets to DIN 6499 - Form A and B.

Supplied with: **Precision clamping nut**.

Optional extras: Coolant tube No. 309880,
Socket wrench No. 309890,
ER collets Fahrion No. 308901 and 309432.
Hook wrench No. 628400, or torque wrench No. 309749 or No. 628520.

Note:
- Clamps only nominal ∅ up to shank ∅ tolerance h 10.
- Do not use the clamping nut in combination with a sealing washer.
- Use the precision collet chuck always in conjunction with the precision clamping nut No. 309617; 309618.
- Use in combination with Fahrion collets.
- The blue design ring must be removed for Fahrion HP 2µm ER collets.

HiRunER
- *Collet is fully seated in the chuck*
- *Higher clamping forces!*
- *Improved radial run-out!*

Standard ER chuck
- *Collet is not inserted 100 % in the chuck.*

Slide-optimised surface treatment

FAHRION® FAR BEYOND PRECISION

Precision ER collet chuck – ISO 12164-1 (DIN 69893-1)

- Ground externally and internally with RFID / Balluffchip bore.
- **Concentricity and repetition accuracy 3 µm** at 3×D, maximum 50 mm when using a HP precision collet.
- **HDC = Heavy Duty Chuck**, a mount specially designed for rough machining.
  A reinforced chuck body ensures better stability and plenty of radial stiffness.
  Ball-bearing clamping nut with trapezoidal-shaped fine thread for optimum tightening torques and clamping forces reduces vibration.
- **Very high clamping forces** due to the collet fully seated in the chuck and coated clamping nut.
- **Vibration damping** due to the element collet and mass of the chuck.

Application: For high precision clamping of tools with plain shank.
30 5912–5954 – **HDC** especially well-suited for roughing (including TPC milling) and finishing operations and machining of high-tensile or tough materials.

Supplied with:
30 5910–8436 – Without clamping nut.
30 5912–5954 – Supplied with ball-bearing clamping nut.

Optional extras: Coolant pipe No. 309880, socket wrench No. 309890, precision ER collets for HP No. 309368 – 309381, and for taps No. 309402 – 309419 (not for Holex), ER CP clamping nuts No. 309655; 309665, ER HDC clamping nuts No. 309657, HP sealing rings No. 309666 – 309668, CP roller bearing wrenches No. 309754; 309756, HDC roller bearing wrenches No. 309745/309756.

Note:
- **Clamps only nominal Ø up to shank Ø tolerance h10.**
- Use in combination with Fahrion collets.
- 30 5912–5954 – Not compatible with Centro P clamping nut.

Mini *– size 11M (extremely slim design!).*

Please order CP clamping nut separately!

ISO 12164-1 | DIN 69893 | Form A | G 2.5 25000 min^{-1} | HSC

Collet chuck, extra slim – ISO 12164 (DIN 69893-1)

- HSK mating faces machined.
- Shanks hard turned.
- With RFID/Balluffchip bore.
- The collet is clamped by a threaded connection from behind **through** the chuck, **no clamping nut required.**

Advantage: Extremely slim design permits machining of components where access is difficult, e.g. during toolmaking and mould-making.

30 4982 – Large working range and optimised contour for reduced vibration. Cooling with the collet by the tool or along the shank.

Application: For clamping tools with plain shank to DIN 6499.

Supplied with: Clamping screw and wrench with T-handle.

Optional extras: Plug-in socket No. 309890, **GARANT collets No. 309563.**

30 4982 – **ALBRECHT collets No. 309572 and 309573.**

Heavy-duty chuck – ISO 12164-1 (DIN 69893-1)

- Low friction due to needle bearings.
- Protected with anti-corrosion coating.
- Dust-tight and watertight.
- Very high clamping force prolongs tool life and improves surface quality.

30 5535/5538 –
- Centred tool clamping with optimum concentricity.
- **Internal coolant feed.**

Advantage:

30 5535/5538 – Long tool life. Vibration damping properties. High stability due to strengthened clamping nut.

Application: For clamping tools with plain shanks.

Supplied with: Clamping nut

Optional extras: Coolant pipe No. 309880, Collets No. 309566 – 309570 and No. 309575 – 309576.

Angle heads

When is an angle head recommended?

1. Milling or drilling work on hard-to-reach components.
2. When extending the machine tool with an additional axis.
3. Internal machining of workpieces (if they cannot be accessed with a normal machine spindle).

What aspects should you pay attention to when selecting an angle head?

1. Drive of the machine spindle (e.g. SK or HSK)
2. Version of the angle head
   – Standard variant
   – Double spindle (for machining on both sides)
   – Set-back variant (for hard-to-reach areas)
3. Torque forces supported at headstock or machine spindle
4. Tool interface (e.g. collet, Weldon, etc.)
5. Design of the angle head (e.g. slim variant, offset)
6. Cooling (version etc.)

RÖHM Lubritool® lubrication device for HSK machine headstocks

For regular lubrication and maintenance of clamping systems in the machine spindle of HSK machines. Automatic and fast lubrication of the HSK clamping set by inserting the lubrication device from the magazine into the machine spindle.

Exclusively available in the following countries: DE, CH, GB, NL, IT, ES, PT, FR, BE, DK, FI, SE, PL, CZ, SK, HU.

Lubrication pulse when inserted or exchanged.

Suitable for: Machine tools with HSK clamping sets – form A, form T, form E.

Advantage:
- The right lubricant, at the right time, in the right quantity.
- No manual lubrication necessary – and you never have to remember.
- Reduced maintenance time (just 5 seconds).
- Compact design.

Application: HSK tool clamping systems should be maintained **regularly and as instructed by the manufacturer.** One cartridge provides approx. 50 lubrication cycles.

Note: Grease cartridge not included in scope of delivery.

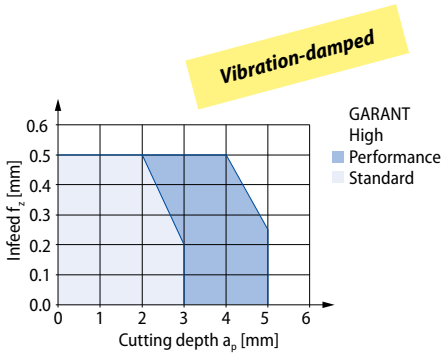
Garant Face mill arbors, vibration damped

- Taper shank, spigot, and all contact surfaces are ground at the collar.
- With Balluff/RFID chip bore.
- Increased collar contact surface.

Supplied with: Cutter lock screw and drive dog.



High-performance version with embedded heavy metal core

≤5µm

Advantage: The heavy metal core specially matched to the arbors gives optimum machining results even with long overhangs:
- Saves time, because allows use of the maximum machining parameters.
- Smooth running and thus perfect surface quality results.
- Saves costs, because tool life is increased.
- Less vibrational stress on the machine headstock.

Optional extras: Special coolant pipe wrench No. 309840, coolant pipe No. 309880.

Note: Balance quality G 6.3 dependent on the maximum operating speed.

Garant Arbor for indexable drill – ISO 12164-1 (DIN 69893-1)

Position of the threaded pin for countersinking in the indexable drill offset by 0.4 mm.
Tightening the lock screw clamps the indexable drill collar against the front face of the holder.
In addition the contact face ∅ is larger than for conventional toolholders.

Suitable for: All indexable drills with parallel shank to DIN 6595, Part 1.
Application: **For mounting all standard indexable drills to DIN 6595, Part 1.**
Optional extras: Coolant tube No. 309880,
socket wrench No. 309890,
spare screws No. 309907 and 309908.

Garant Vibration damping during milling

In order to reduce vibrations and oscillations during milling, the Hoffmann Group offers a wide variety of solutions for a wide variety of machine interfaces.
Select the right arbor for the respective tool type.

- Face mill arbor
- Screw-in milling cutter arbor
- Carbide/Densimet extensions
- Shrink-fit chuck
- Hydraulic clamping technology
- Precision collet chucks and many more.

DIN 69893 | ISO 12164-1 | Form A | G 2.5 25000 min⁻¹ | ≤3µm | HPC | HSC

Garant Slim hydraulic chuck 3° – ISO 121641 (DIN 69893-1)

- **Extremely slim design** (3°-contour).
- With RFID/Balluffchip bore.
- Axial length adjustment possible.
- Shanks hard turned.
- Reducing adapters can be used.

Advantage:
- **Temperature-resistant** due to completely enclosed system, i.e. no soldered pressure chambers.
- Ideal damping characteristics.
- High transmissible torques, providing high process reliability.

Application: Especially in operations in toolmaking and mould making. **Wherever reduced interference contours are required**. For drilling, reaming and milling. For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Reducing sleeves No. 302135 – 302165.

ISO 12164-1 | DIN 69893 | Form A | G 2.5 25000 min^{-1} | ≤3µm | HSC | HPC

Hydraulic chuck – version HT (High Torque) – ISO 12164-1 (DIN 69893-1)

- Very high total rigidity due to optimised design.
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10 mm.
- Flexible due to use of reducing sleeves.

Advantage:
- **Very high transmitted torque (550 Nm),** providing high process reliability.
- **Ideal damping characteristics,** resulting in optimum surface finishes, increased tool life and spindle protection.

Application:
- **Especially for heavy-duty milling.**
- For clamping tools with shank tolerance h6.

Supplied with: Hexagon cross-bar wrench.

Optional extras: Coolant tube No. 309880, socket wrench No. 309890, reducing adapters No. 302135 – 302187.

Note: Caution in the case of extra-long tools and TPC machining.

ISO 12164-1 | DIN 69893 | Form A | | G 2.5 25000 min^{-1} | ≤3µm | HPC | HSC

GARANT Master Chuck hydraulic chuck slim – ISO 12164-1 (DIN 69893-1)

- **Slim design** (4.5° contour, identical to shrink contour according to DIN 69882-8)
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10 mm.
- Reducing adapters can be used.
- **Temperature resistant up to 120°C for 4 hours.**
- **Up to 10× more clamping operations possible compared to a standard hydraulic chuck.**
- Very low tightening torque of the clamping screw – easy handling.
- **Patented new hydraulic clamping system – reliable and durable premium radial run-out.**

Application: Particularly for use in tool and mould making where a reduced interference contour is required. For drilling, reaming and milling. For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Coolant tube No. 309880, socket wrench No. 309890, reducing adapters No. 302140; 302135 302145 302147 each size 12 and No. 302150; 302155; 302160; 302165 each size 20.

30 7502

Same properties as shrink-fit chucks:
- *Accuracy.*
- *Extremely slim, identical interference contour.*

Advantages over shrink-fit chucks:
- *Better damping.*
- *Simpler to use.*
- *Flexibility (through reducing adapters).*
- *No shrink-fit units required (costs, energy consumption).*

ISO 12164-1 | DIN 69893 | Form A | G 2.5 25000 min⁻¹ | ≤3µm | HSC | HPC

GARANT Master Chuck hydraulic chuck performance – ISO 12164-1 (DIN 69893-1)

- Particularly suitable for highly dynamic milling applications.
- **Optimised outer contour due to FEM** (finite element method) – robustness due to maximum rigidity, longer tool lives, higher metal removal rate, suitable for all machining strategies.
- With RFID/Balluffchip bore.
- Axial length adjustment, adjustment travel 10mm.
- Reducing adapters can be used.
- **Temperature resistant up to 170°C for 4 hours.**
- **Up to 10× more clamping operations possible compared to a standard hydraulic chuck.**
- Very low tightening torque of the clamping screw – easy handling.
- **Patented new hydraulic clamping system – reliable, durable premium radial run-out.**

Application: Universally designed for roughing and finishing operations. For clamping tools with shank tolerance h6.

Supplied with: Hexagon socket drive with T-handle.

Optional extras: Coolant tube No. 309880. socket wrench No. 309890, reducing adapters No. 302140; 302135 302145 302147 each size 12 and No. 302150; 302155; 302160; 302165 each size 20.

Maximum metal removal rate with maximum precision!

ISO 12164-1 | DIN 69893 | Form A | G 2.5 25000 min⁻¹ | ~3µm | HSC | HPC | h6 S-λ®

Shrink-fit chuck Power Shrink Chuck with SAFE-λOCK® – ISO 12164-1 (DIN 69893-1)

Shrink-fit chuck for very high metal removal rates during high-performance cutting (HPC).
The optimised design combines excellent stiffness with vibration damping.
This protects the machine, spindle and tool.

- **Safe-Lock tool pull-out protection** prevents the tool being pulled out accidentally.
- Higher metal removal rate due to higher speeds, higher feed rates and greater cutting depth.
- Shorter machining times.
- Runs more smoothly, which improves the surface quality and protects the tool, spindle and machine.
- With tapped holes for balancing with screws.
- With pluggable Cool Jet holes.
- With length adjustment screw (adjustment path 10 mm).

Application: For clamping tools with parallel shank to h6 tolerance **with Safe-Lock ground surface.** Suitable for all types of shrink-fit unit such as inductive, contact and hot air shrink-fit units.

Optional extras: For milling cutters with Safe-Lock clamping flat, see solid carbide milling cutters. Coolant pipe No. 309880, socket wrench No. 309890, shrink-fit units No. 354210 – 354450, balancing screw set No. 309906 size 180.

Note: Other shrink-fit chucks with **Safe-Lock** available on request.

Detailed information on Safe-Lock can be found under milling.

The main features:
1. High concentricity (< 0.003 mm).
2. Low tendency to vibrate due to optimised outer contour.
3. Slim design at the tip.
4. Very deep shank.
5. Cool-Jet as standard (can be locked).
6. Safe-Lock.

ISO 12164-1 | DIN 69893 | G 2.5 25000 min⁻¹ | ≤3µm | HSC

Garant Shrink-fit chucks 4.5° – ISO 12164-1 (DIN 69893-1)

- High-temperature steel.
- Integral tool length adjustment, adjustment track 10 mm.
- Sizes 3 – 5 for carbide, from size 6 for HSS and carbide.
- All shanks hard turned (for smooth running!).
- With RFID/Balluffchip bore.

GARANT: – HSK mating faces machined.

Application: For holding end mills and drills with parallel shank to h 6 tolerance. Suitable for inductive, contact and hot air shrink-fitting units.

Optional extras: Coolant feed pipe No. 309880. Plug-in socket No. 309890. Shrink-fit chuck extension No. 302410 – 302416. Shrink-fit units No. 354210 – 304755.

Note:
30 8028 Size 12; 16 – Not prepared for coolant pipe.

Versions with cooling channel bores on request!

30 8187/8196/8286 – With **cooling channel bores** tapped for plugging. Ø D1: 3 mm, 4 mm, 5 mm cannot be plugged.

30 8165/8192/8206/8277/8283/8284 – With **cooling channel bores** tapped for plugging.

30 8165/8170/8184/8187/8189/8192/8193/8195/8196/8205/8206/8235/8265/8277/8282/8285/8283/8284/8286/8294 – **GARANT:** HSK mating faces machined. **All shanks hard turned (for smooth running!).**

30 8172/8194/8267 – Premium version: Nickel plated version with 4 pluggable **cooling channel bores.** Integral tool length adjustment (adjustment track 10 mm).

30 8184/8193 – Without tapped holes for balancing screws and **without thread for coolant pipe**.

Application:
- For holding end mills and drills with parallel shank to h6 tolerance.
- Suitable for inductive, contact and hot air shrink-fit units.

Supplied with: For chucks with length adjustment including a length adjustment screw (from clamping Ø D_1 6 mm).

30 8172/8194/8267 – 4 × M3 nozzle screws.

Optional extras: Coolant tube No. 309880, socket wrench No. 309890, shrink-fit chuck extension No. 302410 – 302416, shrink-fit units No. 354210 – 354450, balancing screw set No. 309906 180.

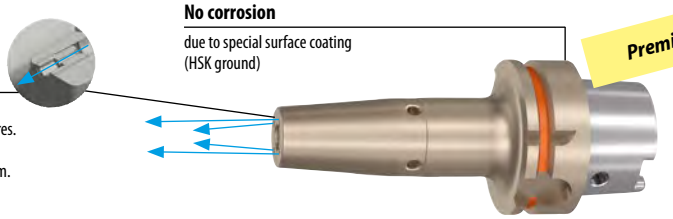
30 8191

Form F

30 8193

Optimised cooling concept
- 4 cooling channel bores instead of 2.
- Different approach angles of the cooling channel bores.
- With 4 nozzle screws to optimise the coolant pressure and alignment of the coolant stream.



No corrosion due to special surface coating (HSK ground)

Premium version

ISO 12164-1 | DIN 69893 | Form A | G 2.5 25000 min^{-1} | ≤3µm | HPC | HSC

Garant Shrink-fit chucks 4.5°, slotted – ISO 12164-1 (DIN 69893-1)

- High-temperature steel.
- With 4 cooling channel slots on the clamping hole.
- All shanks hard turned (for smooth running!).
- With RFID/Balluffchip bore.

Advantage: Improved cooling directly on the tool shank.
Facilitates the removal of small tool diameters.

Application: For holding end mills and drills with parallel shank to h6 tolerance.
Suitable for inductive, contact and hot air shrink-fitting units.

Optional extras: Coolant feed pipe No. 309880.
Plug-in socket No. 309890,
Shrink-fit chuck extension No. 302410 – 302416.
Shrink-fit units No. 354210 – 304755.

Garant

Shrink-fit chucks 3° (for tool and mould making) – ISO 12164-1 (DIN 69893-1)

- All shanks hard turned (for smooth running!).
- HSK mating faces machined.
- **Slim design (3° contour).**

30 8302–8314 – **Balancing quality 2.5 / 40,000 rpm.**
30 8316–8322 – **Balancing quality 2.5 / 25,000 rpm.** With RFID/Balluffchip bore.

Application:
- **Especially in tool and mould making.**
- For clamping tools with shank tolerance h6.

Optional extras: Coolant tube No. 309880. Socket No. 309890.
Shrink-fit chuck extensions No. 302410 sizes 12/3 and 12/4.
Shrink-fitting units No. 354210 – 354450.

Further HSK-E holders are available on request.

DIN 69893 | ISO 12164-1 | Form A | G 2.5 25000 min^{-1} | ≤3µm | HPC | HSC

Garant Shrink-fit chuck, vibration-damped – ISO 12164-1 (DIN 69893-1)

- High-temperature steel.
- Integrated length adjustment of the tools.
- For HSS and solid carbide tools.
- Shanks hard turned (smooth cutting action!).
- With RFID/Balluffchip bore.
- With coolant channel bores and threads that can be sealed.
- With tapped holes on each side for balancing screws.
- **Reinforced version/contour.**
- **Polished surface.**
- **Specially mounted carbide core in the shrink-fit chuck body.**

Advantage:
- **Vibration-damping.**
- **Better workpiece surface finish.**
- **Optimised tool life.**
- **Increased process reliability.**
- **Lower corrosion tendency due to polished surface.**

Application: For clamping tools with plain shank (h6 shank tolerance). Suitable for inductive, contact and hot air shrink-fitting units.

Optional extras: HSK coolant tube No. 309880, Socket wrench No. 309890, Shrink-fit unit, accessories No. 354210 – 354440, Balancing screws set No. 309906 size 180.

ISO 26623-1 | G 2.5 25000 min^{-1} | ≤3µm | HSC | HPC

Garant Arbor for indexable drill with polygonal shank (PSC) – ISO 26623-1

- Position of the grub screw for countersinking in the indexable drill offset by 0.4 mm.
- **When tightening** the increased contact face Ø is clamped against the front face of the arbor.
- **Better support,** allowing **higher feed rates.**
- **High concentricity** due to 3 µm ground flat contact face.
- With RFID/Balluffchip bore.

Suitable for: All indexable drills with parallel shank to DIN 6595, Part 1.

Application: **For mounting all standard indexable drills to DIN 6595, Part 1.**

Optional extras: Coolant tube No. 309885; socket No. 309893.

ISO 26623-1 | G 2.5 25000 min⁻¹ | ≤3µm | HPC | HSC

Garant HiRunER precision ER collet chuck - ISO26623-1

External and internal tapers are ground. All shanks are turned for smooth running. Including RFID/Balluffchip bore, high-performance clamping nut up to 25000 rpm.

Advantage:
- **Excellent concentricity in the system** (chuck + collet + clamping nut), 3 µm radial run-out with a 2 µm clamping nut, 6 µm radial run-out with a 5 µm clamping nut.
- **Extremely strong holding force** (up to **factor 2** better than the standard ER chuck).
- **Vibration reduction effect** due to 2-part clamping nuts.

Application: For clamping tools with plain shank in collets to DIN 6499 – Form A and B.

Supplied with: Supplied with **precision clamping nut.**

Optional extras: Coolant tube No. 309885, assembling key No. 309893, ER collets No. 308901 – 309432, hook spanner No. 628400 or torque wrench No. 309749 or 628520.

Note:
- Clamps only nominal ∅ up to shank ∅ tolerance h 10.
- Do not use the clamping nut in combination with a sealing washer.
- Use the precision collet chuck always in conjunction with the precision clamping nut No. 309617.
- Use in combination with Fahrion collets.
- The blue design ring must be removed for Fahrion HP 2µm ER collets

Standard ER chuck -> Collets are not inserted 100 % into the chuck.

HiRunER -> the full surface of the collet is seated in the chuck -> higher retention forces! -> reduced radial run-out!

FAHRION® HP precision ER collets for CENTRO P – accessories

System concentricity and repetition accuracy **3 µm** (3×D, maximum = 50 mm), in conjunction with FAHRION CENTRO P chucks.
Corrosion protection: Collets fully coated with FAHRION Protect, including the functional faces.
Suitable for: Precision ER collet chuck CENTRO P.
Advantage: The coating increases the service life of the collet and ensures full functionality and precision.

Note:
- Optimum concentricity only when used in CENTRO P chucks.
- Clamping range h10 (nominal size only).

30 9369/9371/9374/9377 – With **seal** for through-coolant feed (for use up to 60 bar). **Similar to** ISO 15488-A.
30 9372/9375/9378 – With **seal** for through-coolant feed (for use up to 60 bar) and **spray nozzles. Similar to** ISO 15488-A.

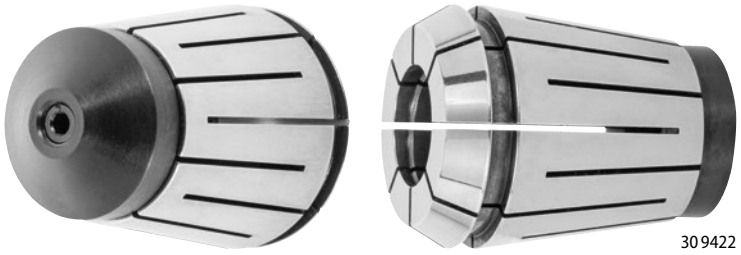
REGO-FIX▲ secuRgrip® ER collet system with pull-out protection

Collets with secuRgrip® have a contour similar to the thread in the clamping bore. By inserting the threaded insert into the ground HB flat (Weldon) of the milling cutter, the combination of milling cutter + threaded insert can be screwed in the collet, thus preventing the tool pulling out.

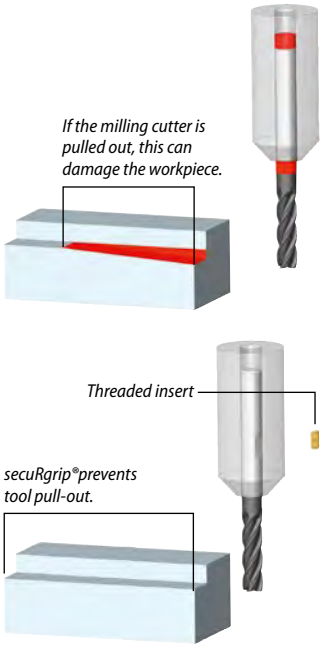
Advantage:
- Process reliability when working – 100% pull-out protection for the tools.
- Longer tool life times.
- Vibration-damping effect of the collet.
- Complete flexibility due to the ER collet system.
- User-friendly handling – no need to modify the collet chuck.

Application: The secuRgrip® system transforms a conventional collet chuck into a chuck with pull-out protection, whilst retaining the advantages of the flexible ER collet system.

Note: Only clamps the nominal diameter. Ensure correct seating in the collet chuck: if used, for example, in ultra-short collet chucks, remove the length compensation disc on the underside of the collet if necessary.



30 9422



Process reliability thanks to REGO-FIX secuRgrip®.

secuRgrip® ER collet with pull-out protection

Through hardened and ground.
The length can be roughly pre-set using an integrated screw at the bottom of the collet.

Suitable for: All carbide milling cutters with standard Weldon flat.

Application: First, click the collet into the clamping nut. Then screw in the milling cutter to the desired length (if not already done: the length adjustment screw must lightly lie against the milling cutter).

Optional extras: Threaded insert No. 309426.

ER collets for thread tapping – with square socket drive

With square socket drive for positive engagement of the tap.

30 9402/9404/9406/9409/9413/9414/9418/9419 – **FAHRION® corrosion protection:**

- Collet completely coated, including the mating faces.
- This increases the service life of the collet and ensures full functionality and precision.

30 9402/9406/9409/9414 – With sealing plugs for through coolant supply (up to 60 bar!).

30 9399/9407/9421/9427 – With sealing plugs for through coolant supply (up to 70 bar!).

30 9419 – With sealing plugs for through coolant supply (up to 100 bar!).

30 9404/9413/9418 – With sealing plugs for through coolant supply (up to 60 bar!) and spray nozzles.

Suitable for: All standard ER collet chucks, FAHRION collets also for the Centro P precision ER collet chuck.

Note:

30 9399/9407/9421/9427 – **HOLEX® ER collets are incompatible with Centro P and HiRunER collet chucks.**

30 9399 Size 2,5; 2,8 – Without seal.

30 9402–9406/9409–9419 – **FAHRION®** collets similar to ISO 15488-A.

HOLEX ER collets for thread tapping – with quick-release chuck

- The tap is clamping by a recirculating ball clamping mechanism.
- Integral quick-change device.
- Collets for thread tapping, similar to DIN 6499 / ISO 15488.

Suitable for: All standard ER collet chucks.

Advantage: Quick locking/unlocking by spring mechanism.
No screw clamping required on the square drive flats of the tap.

Note: Clamps only the nominal ∅.
Not compatible with the CENTRO P precision ER collet chuck.

Collets, extra slim (micro-machining, for toolmaking and mould-making)

Through hardened and ground. Extremely slim design. The collet is drawn into the taper seating by a **threaded connection** from behind through the chuck. **Reduced distortion** due to elimination of the clamping nut.

30 9572 – With special coating for higher holding torque.

Suitable for:

30 9563 – Extra-slim collet chucks No. 300782; 300784; 304972; 304974.
30 9572 – Extra-slim collet chucks No. 300772; 304981; 304982; 309571.

ALBRECHT Präzisions Spannfutter ER collet adaptor/extra slim collet

Through hardened, ground and pre-balanced.
Adaption of standard ER collets to extra slim collets No. 309572 and 309573.

Advantage: **Reduced interference contours** permit machining even where access to the component is difficult. Coolant transfer by the tool or along the shank.

Application: For use on lathes with static or driven tools, and also on ER collet chucks.

FAHRION® OZ collets – accessories

Spring steel, through hardened and ground. The through bore (longer clamping range than DIN collets) increases the clamping force. More slits than DIN collets, giving a greater insertion depth in the collet chuck. Suitable for jobber drills, for clamping on the guide land **Clamping range = Nominal size down to minus 0.5 mm.** 5 or 6 slits each end.

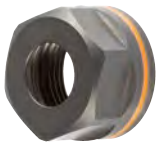
Accessories for toolholders – clamping nuts

ER clamping nuts

DIN 6499 D



30 9595_11-20

Thread and taper ground in a single setup for highest concentricity.

30 9595 Size 11 – **With hexagon** 17 AF.

30 9612 – With plain bearings, delivering lower friction and higher clamping force.

30 9617 – Surface smoothly coated, ball-bearing mounted. Low coefficient of friction, high clamping forces.

30 9618 – Slim, symmetrical design.

30 9619 – 6 screws allow the radial run-out to be reduced to zero.

30 9621 – Internal clamping nut with an external thread.

30 9585/9595/9616/9621 Size 16; 20 – **With hexagon** 25 AF.

30 9585/9595/9612/9616/9617/9621 Size 25–40 – **With slots.**

30 9595/9616 – Nut coated for: lower friction and **increased clamping force** coupled with high wear resistance and corrosion resistance.

30 9595_25-40

Suitable for:

30 9617 – HiRunER precision ER collet chuck No. 300642; 300643; 300647; 302839; 302843; 302844; 305523; 305524; 305532.

30 9618 – HiRunER mini precision ER collet chuck. No. 300643 11M, 16M; 302839 11M, 16M; 302844 11M, 16M; 305518 11M, 16M; 305524 11M, 16M; 305527 11M, 16M.

30 9619 – Ideally suitable for lathes, both for stationary and driven tools.

30 9621 – ER collet chucks with internal thread.

30 9585–9616/9619 – All standard ER collet chucks.

Optional extras:

30 9617 – Hook wrench No. 628400, or torque wrench No. 309749 or No. 628520.

30 9618 – ER chuck key No. 309757; 309758.

30 9621 – Single open ended spanner (for size 16), No. 613300 size 25.

30 9585–9616/9619 – ER clamping wrenches, No. 309680 – 309740.
Single open ended spanner (for size 16), No. 613300 size 25.

30 9616/9621 – Sealing rings No. 309622; 309624; 309628; 309632.

Note: Collet chuck and clamping nut are balanced separately!
30 9619 – Up to 6000 rpm.

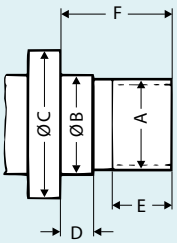
Lathe chuck overview: Mounting and machine spindle noses

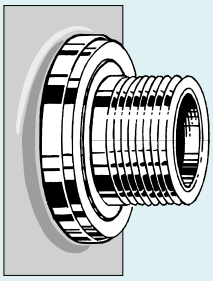
Lathe chucks with cylindrical centring mount to DIN 702-4.

(corresponds to the old standard DIN 6350 and DIN 6350-1)

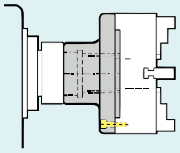
For machine spindles with cylindrical centring edge.
These lathe chucks can also be screwed to DIN 800 spindle noses using a flange.
They are secured using hexagon socket head screws.
The lathe chucks are also applicable on spindle noses with a short taper, using a short taper flange. However, it is preferable to use lathe chucks with an integral short taper because of the lower overhang.



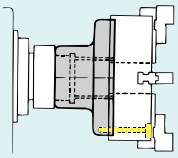
Spindle noses DIN 800



Lathe chuck DIN 6350-1



Secured from the back for geared scroll chucks



Secured from the front for self-centring chucks.

A Tolerance medium	B (g5) mm	C (smallest size) mm	D mm	E mm	F mm

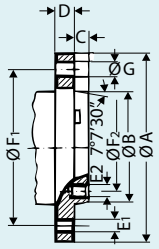
M 105×6	106	150	20	40	80

Lathe chucks with short taper mount to DIN 702-1.

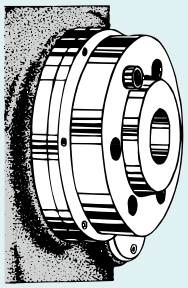
(corresponds to old standard DIN 55028A)

These lathe chucks fit directly on to DIN 55026 and DIN 55021 spindle noses (secured from the front).
They are secured with socket head screws.
Form A: Tapped holes in the outer pitch circle of the flange.
No inner pitch circle. Taper sizes 4 and upwards have 4 driving slots.

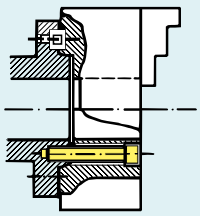
Note: DIN 55021
No longer included in the new standard.
Outer hole circle F available from lathe chuck Ø 250.



Spindle noses DIN 55026



Lathe chuck DIN 55028A



Secured with socket head screws on the spindle nose.

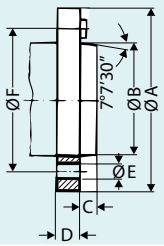
Lathe chucks with short taper mount to DIN 702-3.

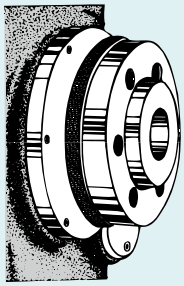
(corresponds to old standard DIN 55027)

These lathe chucks are secured directly on to DIN 55027 spindle noses.
They are secured with studs, collar nuts and the bayonet plate attached to the spindle nose. With driving slots from taper size 4 upwards.

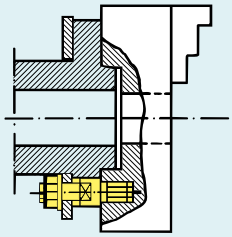


Spindle noses DIN 55027

Most commonly used type on new lathes.



Lathe chuck DIN 55027



Secured with stud and collar nut

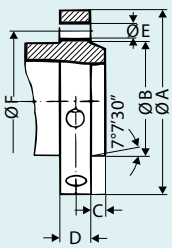
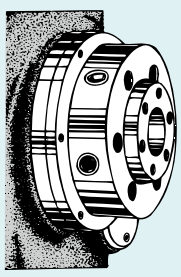
Lathe chucks with short taper mount to DIN 702-2.

(equivalent to old standard DIN 55029 or ASA B5.9)

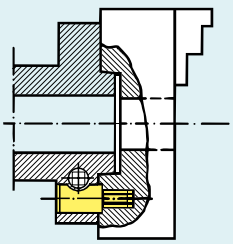
These lathe chucks are secured directly to spindle noses to DIN 55029 or ASA B5.9.
They are fastened with Camlock studs. The studs to DIN 55029 have metric threads, those to ASA B5.9 have imperial threads.



Spindle noses DIN 5502 9 or ASA B5.9



Lathe chuck DIN 55029



Secured with Camlock studs

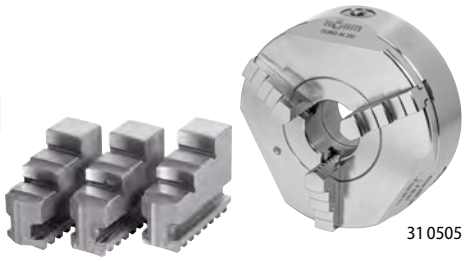
Three-jaw lathe chucks / geared scroll chucks

- Manual chucks with gear scroll, centrically clamping.
- Weight-reduced body of steel.
- Gear scroll drop-forged, balanced, and hardened.
- Flanks of scroll and of jaw serrations are ground.
- High concentricity.

Supplied with: 1 clamping wrench and fastening screws or studs depending on the chuck.

Optional extras: **Spare and additional jaws** see No. 314000 – 315200.
Swarf protection see No. 312800.

Note: For self-centring three-jaw lathe chucks see No. 313120 – 313140.



31 0505

With recessed mount

Standard: **DIN 702-4.**

Application: For machine spindles with recessed centring mount or for mounting using a flange. Secured with screws from the rear. The flange blanks must always be fitted first to the machine and then to the chuck.

Supplied with: 1 set = 3 hard inside jaws, stepped on the outside and 1 set = 3 hard inside jaws, stepped on the inside.

Note: DIN 702-4 satisfies the old standard DIN 6350-1.

Colour code: Röhm geared scroll chucks and jaws

RÖHM Four-jaw lathe chuck / geared scroll chuck

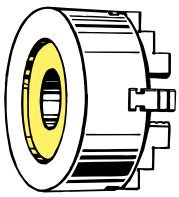
- Gear scroll drop-forged, balanced, and hardened.
- Flanks of scroll and of jaw serrations are ground.
- Weight-reduced body of steel.
- High concentricity.

Drop-forged, resulting in a long working life and **suitability for high speed machines.**

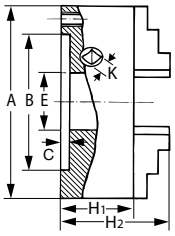
Supplied with: 1 set = 4 hardened inside jaws, stepped on the outside.
1 set = 4 hardened outside jaws, stepped on the inside.
1 clamping wrench and fastening screws or studs depending on the chuck.

Optional extras: **For spare and additional jaws** see No. 314100 – 315300. For swarf protection see No. 312800.

31 2505



Recessed mount to DIN 702-4 (fastening screw from rear).



With recessed mount

Standard: **DIN 702-4**.

Application: For machine spindles with recessed centring mount or for mounting using a flange.

Note: DIN 702-4 satisfies the old standard DIN 6350-1.

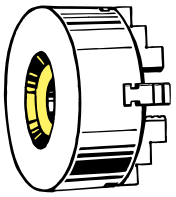
With short taper mount

Standard: **DIN 702-3**.

Material: Steel

Application: For spindle noses DIN 55027 with studs and collar nuts. The chuck is always fitted to the spindle nose directly without an intermediate flange.

Note: DIN 702-3 satisfies the old standard DIN 55027.



Short taper mount to DIN 702-3 (stud and collar nut).

Colour code: Röhm geared scroll chucks and jaws

Spare and additional jaws, geared scroll chucks

31 4400/4425 – **Precision milled** contact face, **not burnished.**

Suitable for:

31 4000/4400/44254600/5000/5200 – **Three-jaw lathe chucks No. 310505; 310655; 310705.**

31 4100/4700/5100/5300 – **Four-jaw lathe chucks No. 312505; 312705.**

Material:

31 4400/4425/4700 – 16 MnCr5

Application:

31 4000/4100 – For fitting hardened reversible jaws or soft top jaws.

31 4400/4425 – For fitting to hardened base jaws.

Note:
- Jaws can generally be renewed in the chuck as long as the guide in the body is not worn out.
- Top, turning, and drilling jaws **bought subsequently must be ground in the chuck** for radial and axial run-out.

HOLEX Three-jaw lathe chuck / additional jaws (geared scroll chucks)

With recessed mount

- Manual chucks with gear scroll, centrically clamping.
- Body made of cast iron or steel.
- Gear scroll drop-forged, balanced, and hardened.
- Flanks of scroll and of jaw serrations are ground.
- High concentricity, more precise than DIN 6386 requirement.

Standard: **DIN 702-4.**

Application: For machine spindles with recessed centring mount or for mounting using a flange. The chuck is secured from the rear by means of screws. The flange blanks must always be fitted first to the machine and then to the chuck.

Supplied with: Includes: 1 set = 3 hardened inside jaws, stepped on the outside.
1 set = 3 hardened outside jaws, stepped on the inside.
1 clamping wrench and fastening screws or studs depending on the chuck.

Optional extras: **Spare and additional jaws** No. 312971 – 312986.

Other lathe chucks

A wide variety of other chucks such as face plates, oversize geared scroll chucks or special chucks available on request from the Hoffmann Group.

With short taper mount

- Manual chucks with gear scroll, centrically clamping.
- Body made of cast iron or steel.
- Gear scroll drop-forged, balanced, and hardened.
- Flanks of scroll and of jaw serrations are ground.
- High concentricity.

Standard: **DIN 702-3.**

Application: **The chuck is always fitted to the spindle nose directly without an intermediate flange.**
For spindle noses DIN 55027 with **studs and collar nuts.**

Supplied with: Includes: 1 set = 3 hardened inside jaws, stepped on the outside.
1 set = 3 hardened outside jaws, stepped on the inside.
1 clamping wrench and fastening screws or studs depending on the chuck.

Optional extras: **Spare and additional jaws** No. 312971 – 312986.

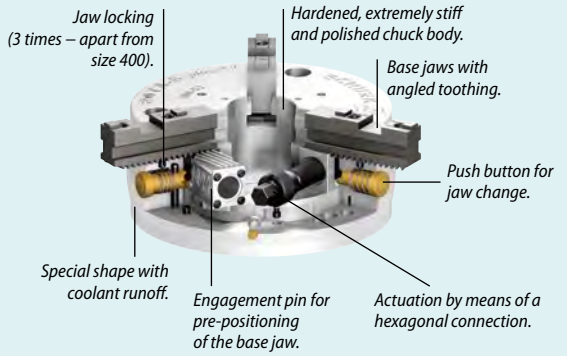
SCHUNK ROTA-S plus 2.0 self-centring three-jaw lathe chuck

- Maximum concentricity and jaw exchange repeatability.
- Long service life with very high precision.
- Modular protective sleeve system.
- Very short set-up times.
- Chuck body case-hardened up to 315 mm ∅.
- Large aperture (dimension E!).
- Safety peg for maximum operator safety.
- **Base jaws compatible with chucks of the "F" system and "Duro" system.**
- Flexible clamping of small and large components.
- High-precision clamping of very small internal ∅.
- Entirely made of steel, thus suitable for high speeds.

Available in different ISO / DIN connections!



Protection against ingress of dirt thanks to self-centring system with wipers

Optimised lubrication system.

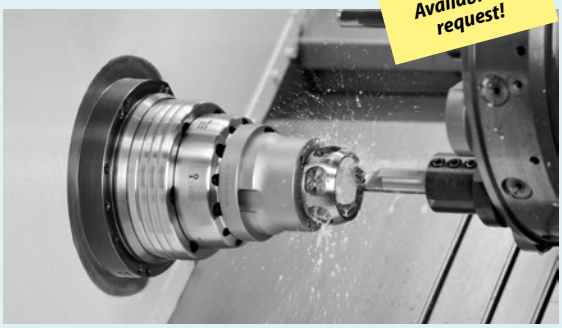
HAINBUCH Mandrels – modern clamping technology for internal clamping

Modern alternative to a jaw chuck or to conventional mandrels with slotted clamping sleeves for complete machining work in turning and milling applications.



Technical data:
- High concentricity
- High holding forces and stability
- Easy to set up
- Workpiece can be accessed from 5 sides

Different versions:
- with draw bolt or without draw bolt for clamping blind bores
- MANDO with round clamping geometry
- MANDO Adapt as mandrel adapter for the HAINBUCH SYSTEM
- MAXXOS with hexagonal clamping geometry
- MANDO G designed specifically for gear cutting
- Micro mandrel for the smallest clamping Ø

RÖHM DURO self-centring three-jaw chuck

- Maximum concentricity and changeover accuracy.
- **With jaw retention, centrically clamping.**
- **Large pass-through diameter.**
- Accuracy twice that specified by DIN 6386.
- High clamping force with low force exertion.
- **Higher speeds thanks to safety blocking slide.**
- Jaws can quickly and easily be reversed or exchanged.
- **Outer contour with drop-off wedge for water.**
- **Grease nipple for greasing all sliding faces.**

Material: **Entirely made of steel, fully surface-hardened.**

Advantage: Wherever extremely high clamping forces, high concentricity, and reliable continuous repeatability are required.

Supplied with: Includes: 1 set of jaws, 1 chuck key, 1 set fastening screws.

31 3110

With recessed mount

Application: For machine spindles with recessed centring mount or for mounting using a flange. Secured with screws from the front. The flange blanks must always be fitted first to the machine and then to the chuck.

Colour code: Röhm self-centring chucks and jaws

Spare and additional jaws – self-centring chucks

Application: As the jaws can be changed or adjusted to the required diameter **in just a few seconds,** it is useful to have several jaw sets on hand ready for use at the machine. **This minimises set-up times.** The jaw units consist for example of several sets of base jaws with soft top jaws, which can be machined out to the required diameters. This rationalisation method is not only necessary for NC machines but also important for every lathe type.

Base jaws hardened

Suitable for:

31 3200/3205 – Schunk self-centring chucks No. 313115; 313117; 313135; 313137, Röhm self-centring chucks Duro No. 313120; 313140 and other self-centring chuck systems.

Application: To accept hard or soft top jaws. Fastening screws for top jaws are supplied.

Hard top jaws

Suitable for: Schunk self-centring chucks No. 313115; 313117; 313135; 313137, Röhm self-centring chucks Duro No. 313120; 313140 and other self-centring chuck systems.

Application: For fitting to hardened base jaws. Applicable as reversible jaws in conjunction with the base jaws.

Note: ■ **Hard top and stepped jaws purchased subsequently must be ground internally in the chuck for concentricity and run-out.**

Soft top jaws

31 3220 – Unstepped, for boring out to individual clamping ∅. **Precision milled** contact face, **burnished.**

31 3300 – **Ground** location faces, **burnished.**
Unstepped, for boring out to individual clamping ∅. **Precision milled** contact face, **not burnished.**

31 3315 – Unstepped, for boring out to individual clamping ∅. **Milled** location faces, **not burnished.**

Suitable for: Schunk self-centring chucks No. 313115; 313117; 313135; 313137, Röhm self-centring chucks Duro No. 313120; 313140 and other self-centring chuck systems.

Material: Quality product made of 16MnCr5.

Application: For fitting to hardened base jaws. For clamping irregularly shaped or already machined components which have to be protected against damage. The jaws are machined according to the contours of the component.

31 3220

Note: Aluminium top jaws **on request.**
31 3315 – **Size 400 also suitable for chuck size 500.**

Garant Magnetic workpiece backstop - for lathe chuck

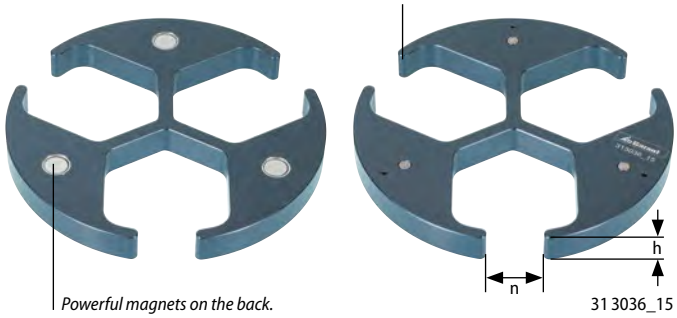
Stop with 3 magnets at the rear. Steel blue anodised.

Suitable for: Three-jaw lathe chucks with jaw width up to 55 mm.

Application:
- For clamping short components.
- For component Ø 15-150 mm.
- Flexible extension of the height by attaching the magnetic height elements No. 313037 5.

Height h		mm	15
31W 31 3036	Workpiece back-stop, base module		eShop
n		mm	25
Material			Aluminium

By milling off the ribs up to jaw width (see dimension n) 55 mm can be achieved.



Powerful magnets on the back.

31 3036_15

Height element

- Centrifugal force protection (positive locking).
- Magnetic attraction by means of 3 magnets.

Base module with height element.

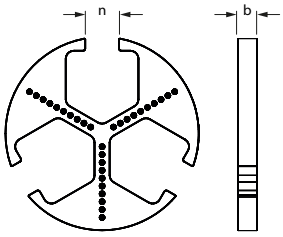
HOLEX Magnetic workpiece backstop - for lathe chuck

31 3033 – Stop with 3 magnets at the rear. Red anodised.
31 3034 – 9 replacement studs.

Suitable for:
31 3033 – Three-jaw lathe chucks with jaw width up to 55 mm.
31 3034 – Workpiece back-stop No. 313033 15.

Application:
31 3033 –
- For clamping short components.
- For component Ø 15-150 mm.
- Flexible extension of the height by screwing in the height elements supplied.

Supplied with:
31 3033 – 9-piece height support set No. 313034 9.
Contents: 3×10 mm, 3×15 mm and 3×20 mm.



M5 thread for positioning the height elements.

Numbered 1–10 as an aid to positioning.

9-piece height support set with M5 thread and height orientation notch.

By milling off the ribs up to jaw width (see dimensions n) 55 mm can be achieved.

Clamping devices: Grease regularly

Why?

Regular lubrication maintains the clamping force and ensures reliable operation of the lathe chuck. Reduction in maintenance and repair costs.

Risks!

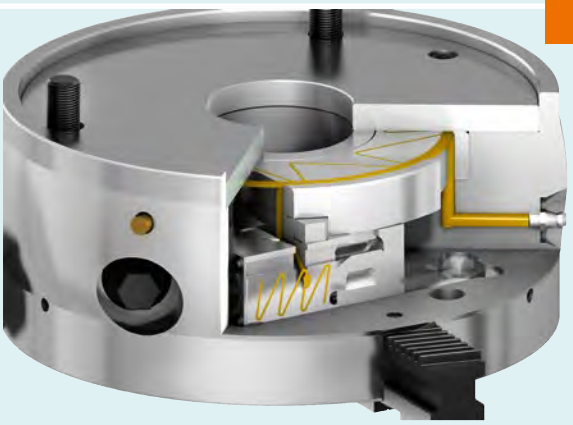
- Clamping force is up to 50% less when the chuck is dry.
- The workpiece may fly out whilst being machined.

What must be complied with?

- Maintenance and lubrication intervals specified by the chuck manufacturer (to DIN EN 1550) must be strictly complied with.
  This instruction can be found in the instruction manuals.
- Ensure equal distribution of the lubricant to avoid imbalances.

Manufacturers recommend:

Linomax:	Particularly suitable for manual chucks
Linomax 200:	Particularly suitable for heavy-duty chucks
F 80:	Suitable for manual chucks and heavy-duty chucks



Central lubrication system of a ROTA S Plus 2.0

For delivery exclusively within Germany!

Chuck jaws finder – Powered by Schunk and the Hoffmann Group

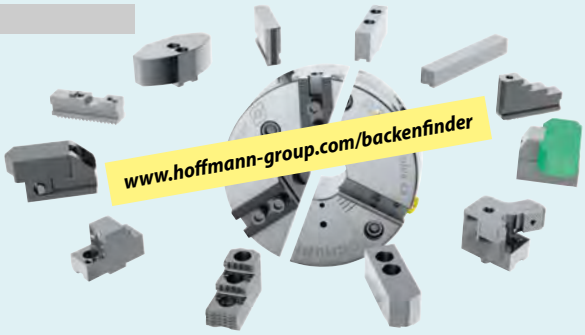
Easily find the right jaws.

SCHUNK offers the largest range of standard chuck jaws in the world.
With just 4 clicks here you can choose the right jaws from more than **1200 standard jaws**.

Large selection of jaws for geared scroll chucks, self-centring chucks or heavy-duty chucks from a wide range of manufacturers.

Chucks range

- Schunk
- Kitagawa
- Berg
- Forkard
- Howa
- Röhm
- Samchully
- SMW



Jaws ranges

- Base jaws
- Top jaws
- Stepped jaws
- Lathe jaws
- Stepped jaws
- Reversible jaws
- Claw jaws
- Segment jaws
- and much more

Quickly and easily find the right jaws for your lathe chuck.
Just 4 steps take you to the right jaw, using our online Jaws Pilot.

www.hoffmann-group.com/backenfinder

Select

1. Chuck manufacturer
2. Chuck type
3. Chuck size
4. Chuck details

Chucks range

- Huge selection of standard clamping jaws for many manufacturers and chuck types.
- Quick and easy.
- No incorrect ordering.
- Mostly available ex stock.

Take advantage of the Hoffmann Group Jaws Pilot and send us a request for a quote without obligation.

SCHUNK Lubricating grease LINOMAX plus

Partially synthetic high-performance grease for regular lubrication of manual chucks and heavy-duty chucks. High bonding capability and water resistance permit constant clamping forces with regular application. The special grease adheres even in the event of rotation in the lathe chuck.

Supplied with: 500 g grease cartridge.

Note:	**Note the dimensions of the grease gun!** Cartridge dimensions: Ø 55 mm × 237 mm.

Available exclusively in the following countries: DE, ESP, PT, FR, IT, CZ

BISON Combination four-jaw lathe chucks – with individual and centric jaw adjustment

Standard:

31 5635 – **DIN 702-4.**

31 5645 – **DIN 702-3.**

Material: Cast iron

Application: Combined clamping option due to two different jaw adjustments:
a) Self-centring adjustment of the base jaws (geared scroll);
b) Individual adjustment of top jaws.
This allows irregularly shaped components to be clamped as if to a face plate. The gear scroll for jaw adjustment is **through-hardened,** the flanks of the scroll and of the bottom jaw teeth are **ground on both sides.**

31 5635 – **With cylindrical centring mount to DIN 702-4**. The chuck is fitted to a flange from the rear by means of screws and this flange is then mounted on to the lathe spindle.

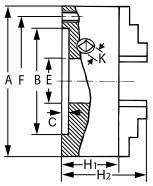
31 5645 – **With short taper mount to DIN 702-3** with studs and collar nuts for spindle noses to DIN 55027. (DIN 55027 and international standard ISO 702/III are identical to DIN 55022 (old standard)). The chuck is fitted to the spindle nose directly, without an intermediate adaptor.

Supplied with:

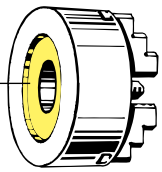
1 set = 4 hardened base jaws,
1 set = 4 hardened reversible jaws (internally and externally applicable)
1 chuck key,

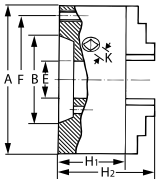
Individual adjustment
of the combined jaws.

Self-centring adjustment
of the jaws.



Recessed mount
to DIN 702-4
(fastening screw)





short taper mount
to DIN 702-3
(stud and collar nut)

RotoRi jaw turning out ring set with RotoFix premium bolts

The special patented design of the turning out rings with **curved segments** permits stepless adjustment of the jaws to achieve the required diameter. The patented flexible RotoFix clamping bolts in the set make it possible to compensate for the large counter-bore tolerances in the clamps of different manufacturers by means of a 2-mm adjustment range. No reworking of screw counterbores is necessary.

Application: The rings made from high-strength special steel allow soft clamping jaws to be bored precisely under clamping pressure or hard clamping jaws to be ground. Can be used on internal or external machining of the jaws.

Supplied with: Sheet metal stand, RotoFix premium bolts and RotoFix rings.

Size S – 20 rings and 3 bolts each M8 / M10.

Size LX – 29 rings and 3 bolts each M10 / M12 / M16.

Size XL – 10 rings and 3 bolts each M16 / M20.

Note: On request also available for 4 and 6-jaw chucks.

Suitable for 3-jaw, manual chucks or heavy-duty chucks!

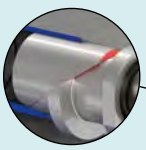
31 5910_XL

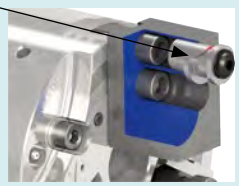
Operation of RotoFix premium bolts and clamping options

1. RotoFix clamping bolt is open. RotoFix clamping bolt is used in the screw countersink up to the shoulder.

2. Rotating the screw adapts the diameter of the RotoFix clamping bolt to the countersink.



3. The RotoFix clamping bolt is now fixed in the bore and the RotoRi ring can be used in the mounting groove of the bolt.



External clamping with RotoFix

Internal clamping with RotoFix

External clamping with ROTORI

Internal clamping with ROTORI

Jaw cutting attachment – for three-jaw chucks

Within the body is a **drop-forged gear scroll**, which is rotated via a knurl ring on the periphery of the body. This gear scroll moves 3 **reversible** adjustment jaws steplessly inwards or outwards. For turning, the clamping screws of the adjustment jaws are positioned in the bore of the lathe chuck top jaws and the chuck is tightened. **During turning the chuck is in the same condition (preloaded) as for the subsequent workpiece machining.**

Application: For precision machining **internal and external diameters of soft top jaws** on lathe chucks. **Also suitable for external and internal re-grinding** of hardened top jaws to **correct radial runout.**

AXA Quick-change toolholders

Quick-change lathe tool post with eccentric clamping

Application: Place the lathe tool post with its surface-ground face on to the cross slide in a horizontal position and clamp it. To do this, the bore of the centring plate must have been turned beforehand. Alignment is performed with the boring bar and boring bar holder clamped in position, aligned at right angles to the face plate. Then adjust the pointer to the zero mark of the cover disc and tighten the T-bolt securely. For precision lathe work or heavy roughing cuts, it is advisable to secure the post with two dowel pins. The holes are pre-drilled.

Supplied with: 1 eccentric lever for No. 318000, 1 tool post key for No. 318100; 318200.

Garant Eco retrofit kit for square toolholder

- For coolant transfer to Eco system screw-on toolholders and grooving toolholders.
- **Suitable for AXA quick-change lathe toolholder no. 318100 and PARAT change toolholders no. 316120 – 316160.**
- The coolant feed is performed via a hose coupling from the left, right or rear.

Supplied with: Includes a screw plug and quick-change coupling (G 1/8 inch) for connection of a hose with external ∅ 6 mm. Coupling length 17.4 mm.

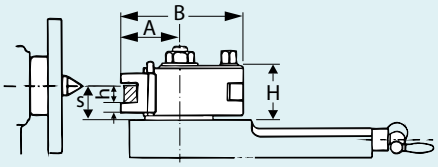
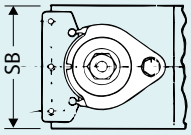
Quick-change lathe toolholders

Size determination for tool post No. 31 8000 and turning toolholder No. 318100.

1. Cross slide width SB.
   The length L of the turning toolholder No. 31 8100 should be about equal to the cross slide width SB.
2. Minimum cutting edge height S when using turning tool height h.





Example for size determination:

Existing: Cross slide width "SB" = 145 mm
height of cutting edge "S" = 33 mm

Required:
1. Turning toolholder No. 31 8100 size B25/140
   140 – for cross slide width SB 145
   B25 – for cutting edge height 33
   (maximum turning tool height h = 20 mm).
2. Tool post No. 31 8000 size B.

Tool height h	Turning toolholder size												
	AA	A		E		B		C	D				
	12	16	20	20	25	25	32	32	40	1/40	1/50	1/63	2/50	2/63

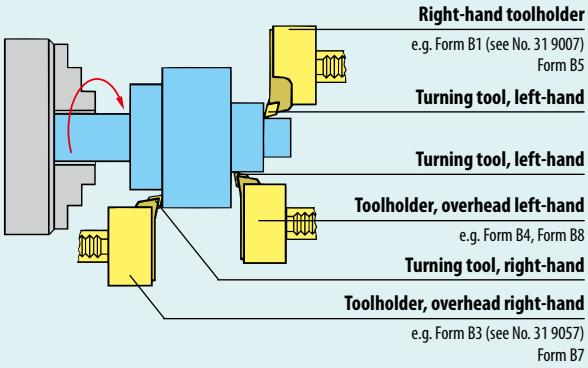
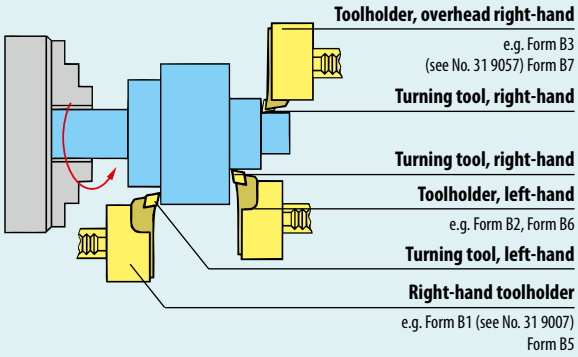
Information on the operation of VDI arbors to DIN 69880, Part 1

Application of radial toolholders

for **anti-clockwise** headstock rotation

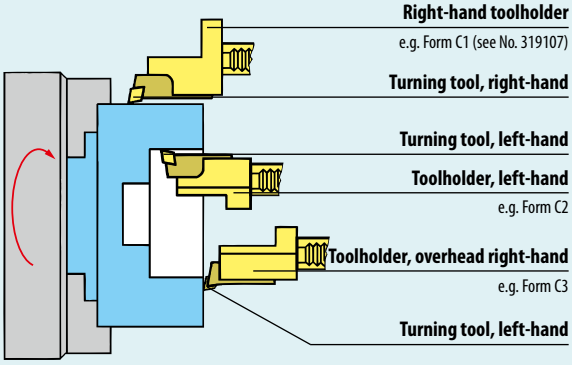


for **clockwise** headstock rotation

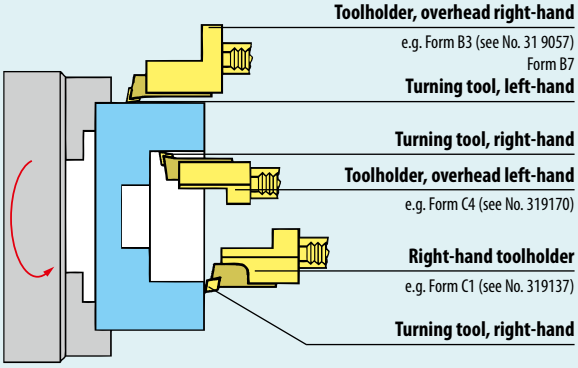


Application of axial toolholders

for **anti-clockwise** headstock rotation



for **clockwise** headstock rotation



Use of tools on radial, BMT, and disc turrets

Driven tools for disc turrets and radial turrets

Optimise your machining processes.
The use of EWS precision tools makes your production process more efficient due to:
- More flexible use of your machine.
- Complete machining of complex workpieces.
- Rationalisation of former operations.

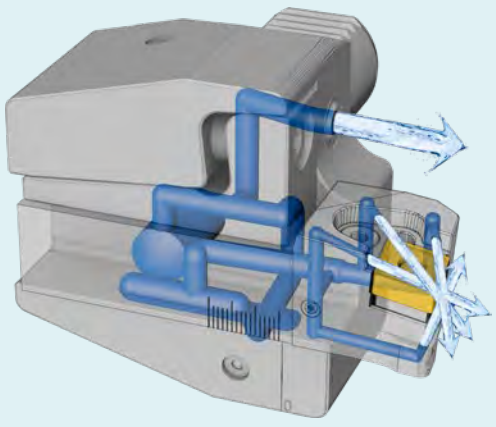
Garant Master eco

Reliable and precise:

GARANT Master eco includes the latest generation of our tried-and-tested GARANT toolholders with internal coolant feed. Our performance promise is efficient cooling of your machining processes.



Direct coolant transfer from the machine to the GARANT Master eco VDI toolholder, to the toolholder. Perfect cooling and chip evacuation at the cutting edge.

Colour code: VDI 16 VDI 20 VDI 25 VDI 30 VDI 40 VDI 50

The new GARANT Master eco-VDI toolholder family form B and C

Novel coolant adjustment.

3 different coolant supply variants via coolant switch using adjusting screw:
Internal: eco cooling by the toolholder.
External: cooling via ball spray nozzle.
Mix: internal + external

Very easy to operate.

The toolholder is fixed to the GARANT Master eco VDI holder by means of only **one** fastening screw.

Optimised accessibility.

The toolholder can be changed directly on the turret in the machine using the front mounting concept.

Parting-off toolholder

- With special adjustable ball type coolant nozzle for optimum cooling of the cutting edge, irrespective of the groove depth.
- This reduces the temperature both at the main cutting edge and the auxiliary cutting edge, and permits a **significant increase in cutting speed.**
- Rigid toolholder for parting-off tools.
- Blade clamped using clamping plate.

Application: Allows parting-off tools of different makes to be used.

Note: Screw plug for ball spray nozzle included. If conventional grooving tools are used, the lateral coolant transfer is blocked by the grooving tool. Suitable clamping claws No. 279840 2 and suitable screws No. 279815 14. See spare parts list.

VDI parting-off toolholder

For use on DMG Gildemeister CTX CNC lathes with radial turrets.

- With double serrations on the VDI shank for left-handed and right-handed use.
- With ball spray nozzle for optimum cooling of the cutting edge.
- Clamping the grooving tool by means of a clamping strip.
- Height adjustment range ±1 mm.

Suitable for: DMG Gildemeister CTX.

Application: Allows parting-off tools of different makes to be used.

Note: Sizes 30-UEK and 40-UEK as overhead versions.

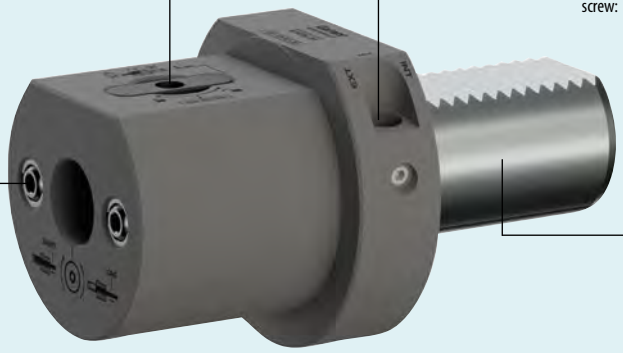
Garant The new GARANT Master Eco VDI toolholders in form E2

Very easy to operate.
The boring bar is fixed in the GARANT Master Eco VDI holder by means of only **one** fastening screw.

Full cooling performance.
Two adjustable coolant spray nozzles as standard for optimum cooling of the cutting edge up to 70 bar.



Novel coolant adjustment.
3 different coolant supply variants via coolant switch using adjusting screw:

- **Internal:** Eco cooling through the boring bar.
- **External:** cooling via ball spray nozzle.
- **Mix:** internal + external.

Through-bored VDI shank.
With individually adjustable stop/length adjustment screw.

Advantages:
- Longer boring bars can be inserted.
- Position the boring bars with excellent repetition accuracy.

Form E2 GARANT Master Eco

- Case-hardened HRC 58+/-2.
- All functional faces ground.
- Through-bored VDI shank.
- With two ball spray nozzles.

Advantage:
- Also suitable for longer boring bars.
- Individual length adjustment for the boring bars.

Application: For internal machining with boring bar holder.

Comprehensive dimensions see eShop

Form E2, slotted

- Wrapping around the boring bar, generates vibration damping and avoids vibration.
- Internal and external cooling available.

31 9275 – The boring bar can be inserted through when using shanks size 10 and 12.
31 9276 – The boring bar can be inserted through when using shanks size 10 and 20.

Note: Spare parts No. 319287 - 319288 can be found in the spare parts list.

Coolant nozzles

For targeted cooling and lubrication on the cutting edge/evacuation of chips.

RIHETEC

Stainless steel version, the flexible pipe can be bent towards the cutting edge. Maximum pressure of up to 10 bar.

31 9470 – Designed specially for compact VDI and BMT toolholders **with coolant hole**.

31 9471 – Designed specially for compact VDI and BMT toolholders **with threaded connector**.

31 9470

31 9471

Note: See 319476 or 319477 for suitable thread adapters and extensions.

Type × pipe length		M5×50	10×50	M6×50	10×70	10×100	11×50	11×70	11×100	12×50	12×70	12×100	Pipe feed-through ∅ mm

Garant Boring bar stabiliser

Base body of high-quality tool steel, surface and functional faces hardened.

Suitable for: All popular boring bars.

Advantage: Reduces oscillation and vibration when used with all types of boring bars.

Note: To determine the right type of boring bar stabiliser, it is essential to perform a collision check using the Hoffmann e-Tool data from the eShop or via the ToolScout!
We recommend a maximum overhang length of 3×D of the types of boring bar used.

31 9454/9458 – Maximum overhang, stabiliser incl. boring bar 6×D.
31 9461–9465 – Maximum overhang, stabiliser incl. boring bar 8×D.
31 9467/9469 – Maximum overhang, stabiliser incl. boring bar 10×D.

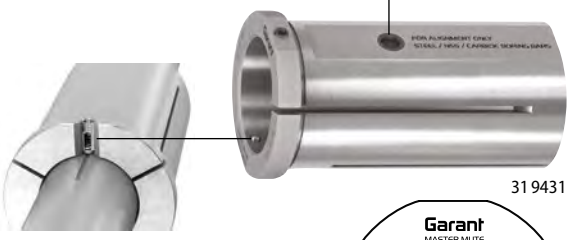
GARANT Master Mute reducing adapter

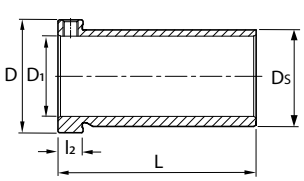
Suitable for all kinds of boring bar holders. Optimal in combination with vibration-damped boring bars such as GARANT Master Mute, and also beneficial when using other boring bars (e.g. carbide boring bars).

Advantage: Due to the slotted version, the reducing adapter wraps around 100% of the boring bar, i.e. vibrations are reduced. Simple and fast alignment of the boring bar via ball or screw is possible.
Application: For Ø reduction for tools with plain shanks.

Adjustment screw on standard boring bar clamping face.



31 9431



Individual adjustment of the centre height via degree scale possible.

HOLEX Reducing sleeves for tools with plain shank

Suitable for VDI arbors form E2 (No. 319275 – 319405).

31 9426 – Suitable for internal cooling, not slotted. Tool is fixed and clamped with 2 clamping screws.

31 9428 – Slotted version - alignment of the tool via fixing screws, clamping via the boring bar holder.

Application: For ∅ reduction for tools with plain shanks.

Garant Quick-change boring bar system

Note: Pre-setting e.g. using GARANT No. 354760 VG1 or 355010 VGBASIC with reducer No. 354773 (sleeve No. 313291 size 25 with additional reducing adapter No. 319426; 319428 each in size 40/32).

Quick change adapter

For direct adaption the quick-change toolholder is screwed into the cylindrical clamping sleeve or VDI toolholder by a clamping nut with an external thread.

Suitable for: Boring bars with 1, 2 or 3 drive flats.

Supplied with: Blanking screws for cooling channel holes, blind nuts.

Garant Hydraulic arbors

Unique clamp bridging, clamps h6 and h7 shanks. Laser finished on the end face and alignment screw on the bracket, for simple and clear orientation of the boring bar. Including length adjustment backstop screw. Suitable for through-coolant.

Advantage:
- Ideal damping characteristics, resulting in optimum component surfaces. and increased tool life.
- Quick and easy handling.
- Flexible use of reducing adapters.
- Perfect centring.

Application: Suitable for drilling, reaming, countersinking and also for use of boring bars.

REGO-FIX reCool® coolant supply system for driven tools

- **Easy conversion** of driven tools with external cooling to internal cooling.
- Precise cooling on the cutting edge and improved chip evacuation.
- Particularly suitable for deep pockets and cavities.
- Excellent surface quality.

Advantage:
- Cost-effective conversion of existing driven tool systems to internal cooling.
- Suitable for use with emulsion and oil.
- Coolant pressure up to 100 bar (150 bar with high-pressure hose, available on request).
- Low-maintenance bearings.
- For internal cooling (with sealing rings No. 309630 and 309635).

Size ER25 – Speeds up to 12,000 rpm.
Size ER32 – Speeds up to 40,000 rpm.

Application: Suitable for driven tools with ER thread and G1/8 inch coolant connection, as well as for ER collets to DIN 6499 / ISO 15488.

Supplied with: 1 pc. reCool® clamping nut, 1 pc. spiral spring and hose Ø 6 mm, 400 mm long, 2 pcs. screw connection G1/8 inch BSP straight, 2 pcs. screw connection G1/8 inch BSP 90° angled.

Note: When using the coolant supply system with internal cooling, the suitable sealing ring No. 309630 and 309635 must be used! Coolant flushing rings for peripheral cooling available on request.
On driven tools with a hole in the spindle to the gearbox (e.g. length adjustment screw), it is essential to seal the hole!

ER quick-change toolholder for driven tools

- Two-part design consisting of base body and precision clamping nut.
- Made from high quality tool steel; all functional faces hardened and reworked.

Advantage: Extremely easy-to-use quick-change system for driven tools. Prepare the quick-change adapter with a tool and change it using a driven tool. The clamping nut is ball-bearing mounted.
Multi-flexible use:
- Quick and easy exchange of adapters for the driven tool used.
- Suitable for all driven tools from various manufacturers with ER collet connection.

Application: For drilling and milling with driven tools with ER collet connection.

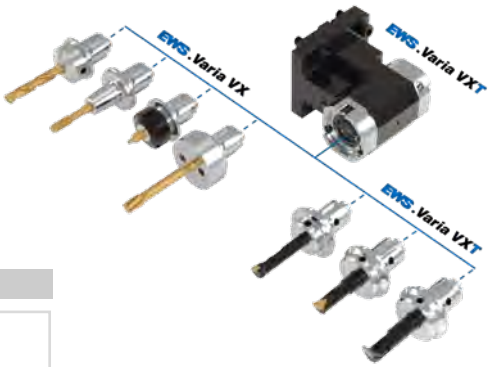
- Highest precision and repeatability (+/- 0.002).
- Backward compatibility with VARIA VX

Application: Quick-change system for static rotary applications.



Boring bar inserts - VARIA VXT

Note: Maximum tightening torque for VXT3 and VXT4 is 5.4 Nm, which can be achieved using the appropriate torque wrench No. 211750 size 5.7. When releasing the inserts, do not travel beyond the stop. We recommend the EWS Clean and cleaning set for cleaning the Varia toolholders and replaceable inserts.

Garant EWS Driven tools with "CyberCon4" sensor system

The digital view for capturing kinematic processes.
System monitoring via Bluetooth of powered tools.

- Rotational speed and temperature: Live mode display.
- Statistical values are stored on the tool chip.
- Displays whether the tool is flooded with coolant if the seal is defective.
- Switching on and off (overall cycles counter).
- Displays the total operating hours.
- Records the longest machining cycle.
- Intelligent service counter.

The data can be visualised on a mobile device (such as a mobile phone or tablet) in conjunction with an app suitable for the purpose.

Available on request

Garant Driven tools (AGW)

For use on all **DMG Gildemeister CTX** CNC lathes with **Sauter** turret and drive coupling **DIN 5480** or machines with **BMT turret** with drive coupling **DIN 1809.**
Clamping of tools in driven tool using ER collet with external/internal nut or VARIA VX quick-change system under license from EWS.
External cooling via innovative coolant management, internal cooling through the tool centrally through the spindle.

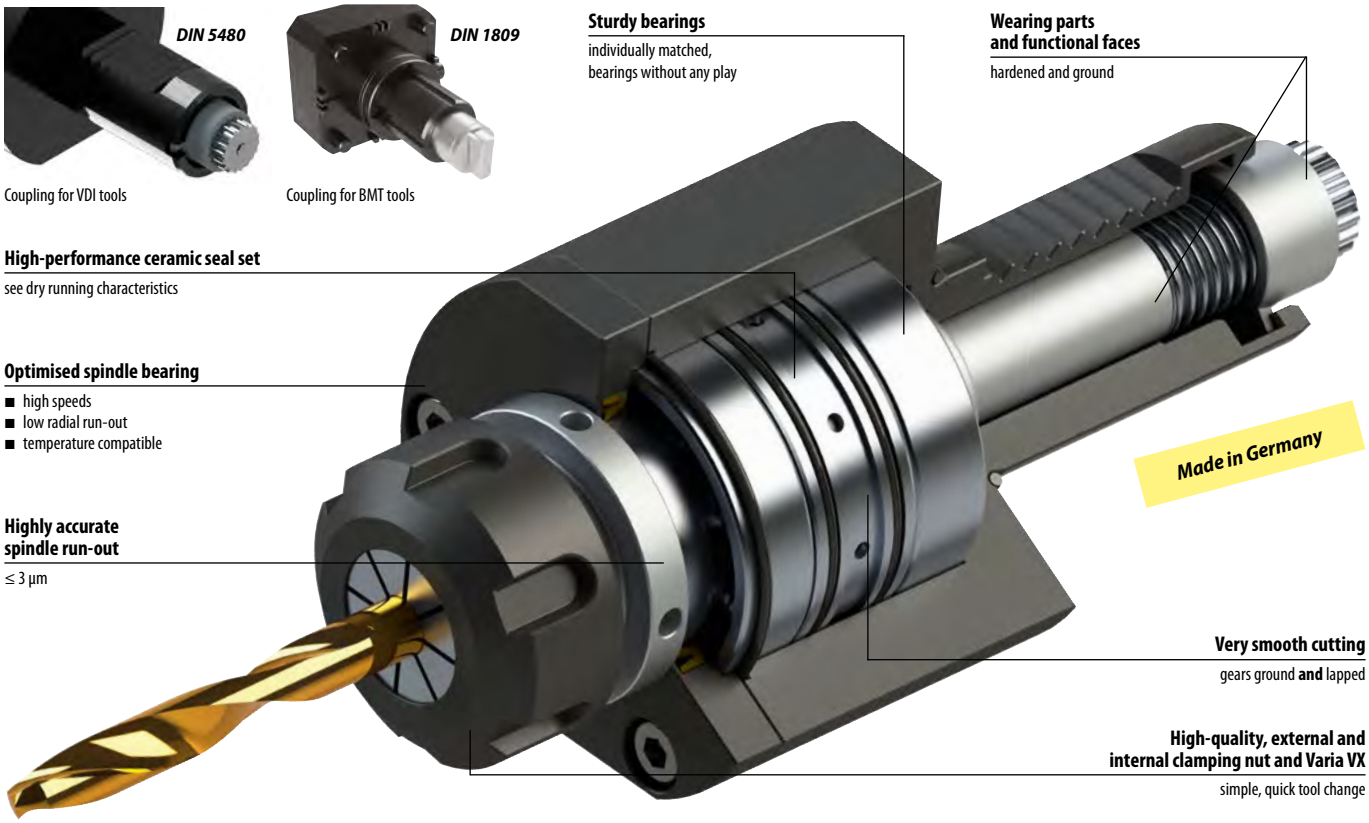
Suitable for: DMG Gildemeister CTX. In some cases, Emco, Hardinge, Monforts, Scherer etc. with DIN 5480 or BMT turret with DIN 1809.

Advantage:
- Design optimised for weight and geometry.
- Process reliability thanks to high-quality components, long working life.
- Transmission of high torques.
- 100% inspection – every driven tool undergoes a run-in program.
- Through cooling: specially developed and patented seal.

Application: As many machining steps as possible in one clamping set-up. Where space (available clamping positions) in the revolver is at a premium.

Supplied with: Driven tool for collet: including clamping nut and hook spanner. Driven tool VARIA VX: including chuck key.

Note:
- Other drive types (such as DIN 5482), ratios, dimensions, BMT etc. on request, see: www.hoffmann.ews-tools.com
- IC tools (internal cooling), can run dry, coolant filtering < 50 µm.
- Recommendation: operate version VARIA VX with a torque tool (max. 6 Nm).
- For heavy-duty milling work, a variant with tapered roller bearings is recommended on request.

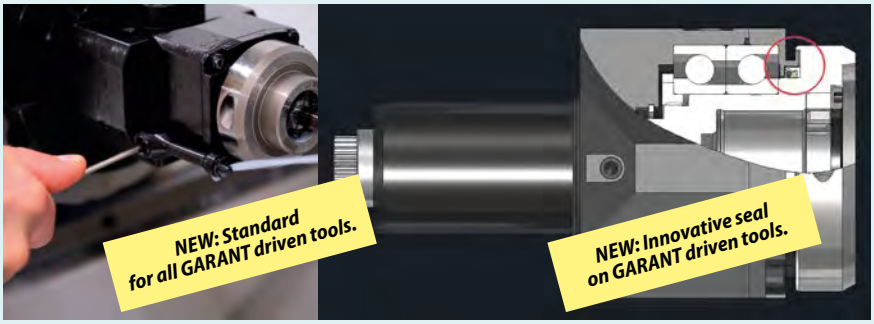


Garant Driven tools:

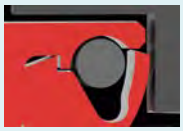
Butterfly seal and coolant management.

New **type of butterfly seal,** which prevents dirt and coolant from penetrating into the inside of the driven tool –> significantly **less maintenance** and almost **wear-free**.

Robust and general-purpose **coolant management.**
- Quick and easy to use.
- Coolant flow adjustable.
- Targeted cooling on the cutting edge.



At low speeds, the sealing lip is in contact.



At high speeds, the sealing lip lifts off.

Driven tools - axial version - for DMG CTX

Version IK – with ceramic seal set, pressures up to 70 bar, with full dry-run capability.
Version IM – with internal clamping nut.
For use on both disc and radial turrets.
Ratio 1:1. Version with internal cooling (internal) max. 70 bar.

Special IK seal for high pressures and dry machining

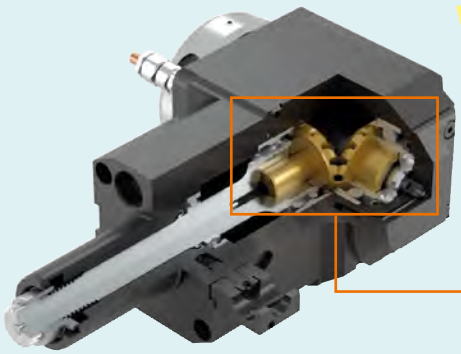
Pin rail

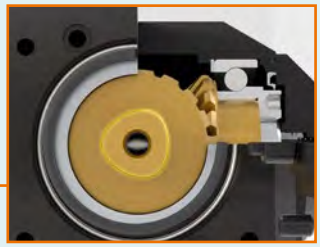
Garant Driven tools:

Polygon connection and VDI double toothing

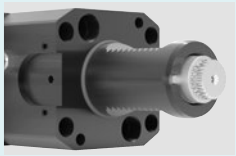
Unique power and speed transmission through **new polygon connection** (drive/output shaft to gear pinion). Compared to conventional groove-spring connection:

- Significantly less maintenance.
- Better torque transmission.





Significantly more flexible use of radial driven tools, thanks **to VDI double-toothing** -> one tool for the main **spindle and** counterspindle.



Driven tools - axial version - for BMT turret

Version IK – with ceramic seal set, pressures up to 70 bar, with full dry-run capability.
Version IM – with internal clamping nut.

BMT toolholders

High-precision arbors adapted to the specific machine, for flexible use on main and counter-spindle machines.
Contact face and functional face ground. Perfectly matched for the respective lathe.

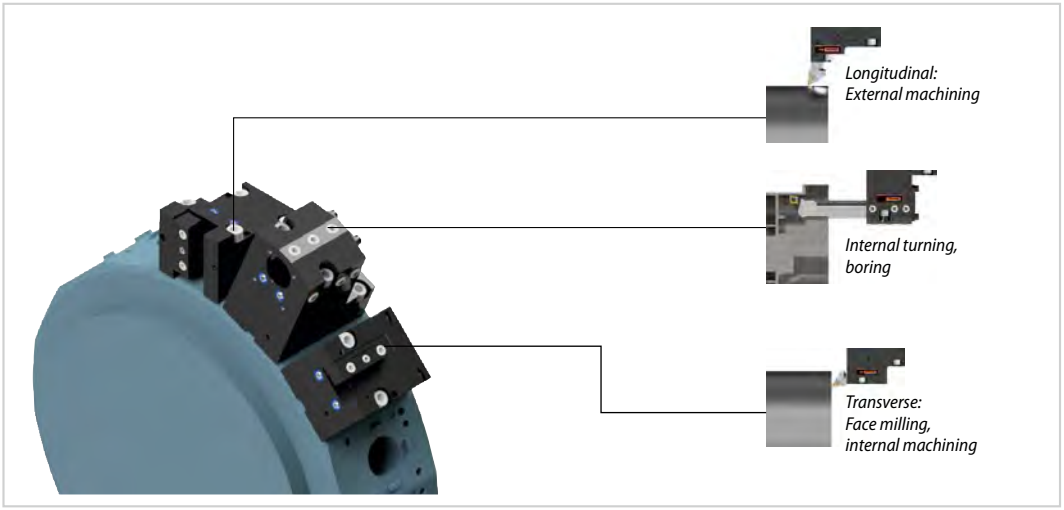
Suitable for: CNC lathes with BMT tool turret.

Advantage:
- Design optimised for weight and geometry.
- Process reliability thanks to high-quality materials, long working life.
- Burnished for better corrosion protection.
- With secured ball injection nozzles up to 80 bar.

Application: Internal and external machining in CNC lathes with BMT tool turrets.

Note: Other BMT holders with different sizes and dimensions are available on request.

31 9888_60



31 9887_60

Boring bar / combination holder

For internal and external cooling.

31 9888 – Suitable for efficient cooling systems such as GARANT eco, but also for other systems. Optimised outer contour.

Application: For internal machining with boring bar holder or indexable drills.

Longitudinal and transverse toolholders

Suitable for conventional toolholders.

31 9884/9886 – Suitable for efficient cooling systems such as GARANT eco, but also for other systems.
Optimised outer contour. Scale to optimally adjust the machining tool.
Spring-mounted pressure pad for uniform clamping of the turning tools.
For internal and external cooling.

Application:

31 9886 – Primarily for facing and internal machining.
31 9884/9885 – Mainly for external machining.

Highly efficient cooling directly at the cutting edge with GARANT eco

ISO 12164-3

Toolholder with hollow taper shank (HSK) – Form T for turning / milling centres

Application: For use on lathes and milling centres.

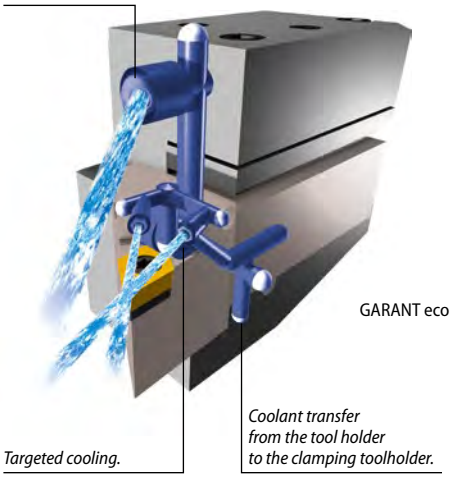
Toolholder for square shanks

With adjustable cooling nozzle with internal thread.
31 8602–8606/8622/8624 – Slim contour for better accessibility.
31 8620–8628 – **GARANT** - Optimisation of tool life, better surface finishes, increased process reliability and increased productivity due to GARANT Eco.

Application: For mounting ISO toolholders with square shanks.

Note:
31 8628 – With pass-through shim. Suitable for toolholders with shank 20 **and** 25 mm.

HSK-T



Additional cooling using a high-pressure spherical spray nozzle.

Targeted cooling.

Coolant transfer from the tool holder to the clamping toolholder.

GARANT eco

Adapted mating face for strong grip.

With pass-through shim. Suitable for toolholders with shank 20 and 25 mm.

SWISSTOOLS High-pressure cooling nozzle (HP) for screw-on / lever-lock toolholders

Optimum cooling using a High Pressure (HP) cooling nozzle.
Application: Attachment to a screw-on / lever-lock toolholder with a HP channel.
Supplied with: 1 attachment screw, O-ring, plug screw for the standard cooling channel.

1. Plug the standard cooling channel with a screw plug.

2. Attach the HP nozzle to the appropriate hole.

3. The HP function is immediately ready for use.

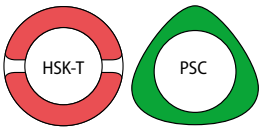
SWISSTOOLS ST boring bar shanks for exchangeable heads

ISO 26623-1 ISO 12164-3



- For efficient turning.
- For left-hand and right-hand turning.

Advantage:

32 0104/0409 –
- Productivity gain - thanks to suppression of vibration the cutting data can be significantly increased.
- Improved surface quality.
- Improved process reliability.
- Improved chip clearance.

Application: For mounting exchangeable cutting heads.

Note: For suitable interchangeable heads see No. 264826 – 264827.

Suitable SwissTools interchangeable cutting heads can be found in the Turning section.

Garant Revolving lathe centres for inserts

- Sprung version for axial length compensation whilst machining.
- Fully hardened and ground. Maintenance-free due to lifetime lubrication.
- Special seal prevents ingress of dirt and coolant.

32 0615 Size 20/0617 Size 20–40 – Plain shank for clamping in boring bar holders, collet chucks or hydraulic chucks; for mounting in the second turret.

Size 32; 40 – For machining heavy components.

Application: Flexible application thanks to exchangeable inserts. For general use on turrets and counter-spindles on CNC machines.

Supplied with:

32 0615 – Including chuck removal tool for releasing the inserts.

Optional extras: Exchangeable inserts No. 320625.

Size 32; 40 – Exchangeable inserts No. 320629.

Garant Extremely slim revolving lathe centres - SlimLine

- **Precision version with additional stiffness in the bearings.**
- Precision roller bearings for high concentricity.
- Maintenance-free due to lifetime lubrication.
- Special seal prevents ingress of dirt and coolant.
- MT shank hardened and ground.
- **With extended centre,** point angle 60° / 30°.
- With push-off thread and push-off nut.
- outstandingly suitable for cutting threads and splining.

Advantage: **Push-off nut can be removed forwards** thus eliminating any obstruction to the machining process.

Application: Machining small and very small parts such as thread machining with optimum access to the flat face.

Supplied with: Including draw-off nut.

32 0643

Garant Revolving lathe centres – shock-absorbing

- Point angle 60°.
- **Sprung live centre to compensate pressure and length, shock-absorbing.**
- Live centre of through hardened tool steel precision ground to match the bearing.
- Precision roller bearing, lubricated for life.
- Shaft seal prevents ingress of dirt and coolant.
- Extremely rigid version with additional shaft bearing.
- Entire tool is hardened and ground.

- **Lightweight version with slim body.**
- Precision roller bearings for high concentricity.
- Maintenance-free due to lifetime lubrication.
- Special seal prevents ingress of dirt and coolant.
- MT shank hardened and ground.

32 0649 – Extremely slim, cylindrical tip geometry for maximum accessibility on the flat face.

Application: Mainly used for machining small and smallest parts on all types of lathes.

32 0647 – Extended point allows unobstructed access for the turning tool on the end face of the component. Particularly suitable for copy turning.

32 0649 – Particularly suitable for the production of even smaller external threads directly on the face side (space for the threading chaser). Allows clamping on internal (recessed) centrings.

Garant Revolving lathe centres with draw-off nut and carbide insert

- Punch axis with carbide insert for applications with a high abrasive influence on the centring.
- Point angle 60°.
- Draw-off nut flattened at the side.
- High-precision bearing for high concentricity.
- Maintenance-free due to lifetime lubrication.
- Special seal prevents ingress of dirt and coolant.

Application: For machining thin workpieces at high speeds and in high quantities with automatic loading in series production.
Designed for high axial forces during heavy-duty machining thanks to special bearing arrangement.

Garant Fixed solid carbide lathe centre

- High-precision solid carbide tip. Close-fitting carbide design for optimum stability and freedom from breakage, **no additional safety equipment required.**
- Tip angle 60°.
- High surface quality on the shank for optimum fit.
- Complete tool hardened and ground.
- With carbide tips for applications with high wear.

Application: For grinding high-precision components.

Optional extras: Draw-off nut No. 323230.

Note: Order the draw-off nut separately. Geometric dimensions to DIN 806 E.

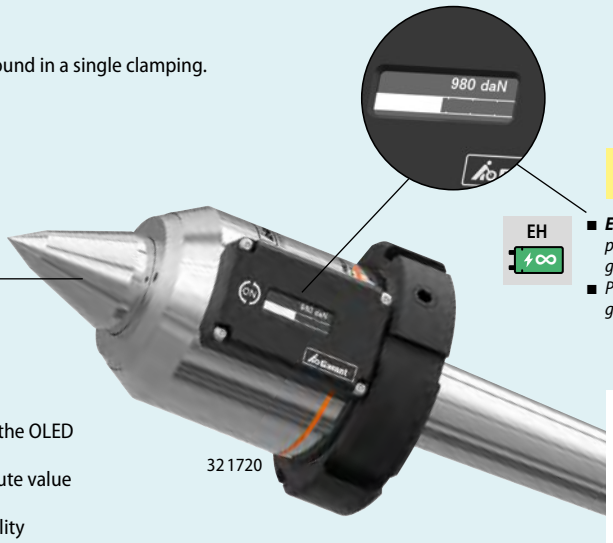
32 3230

Garant Digital lathe centre

- Top quality "Made in Germany".
- Precise and long-lived.
- Tool through hardened, internally and externally ground in a single clamping.
- Lubricated for life.
- Punch axis of through-hardened steel.
- Shaft seal prevents ingress of dirt and coolant.

Very high concentricity
Point is not ground until it is mounted.



32 1720

No batteries required!

EH

- ***Energy harvesting*** *(tool with no battery) power supply for the pressure indicator generated by rotation of the lathe centre.*
- *Power is obtained from the integral generator.*

- Simple visual display of the axial clamping force via the OLED display on the outer body of the housing.
- Digital real-time pressure indicator both as an absolute value and as a bar in the display.
- Bright display with high contrast for optimum legibility during the machining process.
- Splash-proof to IP55.

reddot design award winner 2019

IP 55 EH

Garant Revolving lathe centres with analogue or digital pressure indicator and draw-off nut

- The momentary clamping pressure is directly readable on the analogue or digital display on the base body.
- The live centre is supported by a disc spring pack with a spring travel of approx. 3.7 mm analogue and 2.6 mm or 2.8 mm digital.
- Short sturdy design with active longitudinal axis. Live centre through hardened and finish ground.
- **Maximum accuracy due to precision roller bearings.**
- With push-off thread and push-off nut.
- With special seal against dirt and coolant ingress, maintenance-free due to lifetime lubrication.

With extended centre, point angle 60°/40°.

Application: Whenever **the clamping force should be kept within certain limits,** either to prevent deformation of the component or to ensure secure clamping with sufficient pressure.

- As **a tailstock centre in conjunction with hydro-mechanical face drivers** No. 327451 – 327541 because the drive teeth have to dig into the component.
- For components that expand significantly due to high machining heat.
- For clamping **long slender components to prevent lateral displacement.**
- **For clamping heavy components where a controlled clamping force is required.**

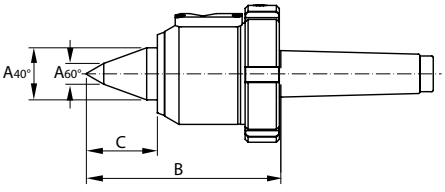
32 1740



Garant Revolving lathe centres with pressure indicator

- The pressure (clamping force) to be adjusted can be read off in kN directly on the manometer sight glass.
- Short sturdy design with active longitudinal axis. Tool is through hardened and finish ground.
- **Precision bearing for high axial loads and high concentricity.**
- With special seal against dirt and coolant ingress, maintenance-free due to lifetime lubrication.
- Length adjustment by means of spring package.

32 1760 – Point angle 60°.
32 1780 – **With extended centre,** point angle 60° / 30°.

Application: **Whenever the clamping pressure has to be kept within certain limits**, either to prevent deformation of the component or to ensure secure clamping with sufficient pressure.

- As a **tailstock centre in conjunction with face drivers** No. 327400 – 327403, 327455 - 327465 because the drive teeth have to dig into the component.
- For components that expand significantly due to high machining heat.
- For clamping **long slender components to prevent lateral displacement.**
- **For clamping heavy components where a controlled clamping force is required.**

Garant Revolving centering taper, truncated cone

- **Centering taper with truncated cone.**
- Particularly sturdy design **with oversize bearings.**
- The bearings have a special lubricant and require no maintenance.
- The centering taper and tapered arbor are made of high quality material, through hardened and finish ground.

Application: For machining **hollow parts, tubes** etc. Particularly suitable for heavy machining where at the same time high accuracy is required.

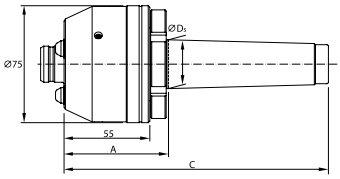
Garant Constant face driver for lathes

Face driver sets

- Constant face driver head with 60° tip angle for use in turning and grinding.
- Face driver with spring-loaded, clampable centring point for a backlash-free, stable clamping situation.
- **High concentricity** thanks to fully ground mechanical components.
- Perfect in combination with our lathe centres No. 321720, 311750 or 321770.
- Conveniently in the GARANT system box 630320.

Supplied with:
- 1 pc. face driver base body No. 327465 (suitable for clockwise and anti-clockwise rotation).
- 2 pcs. centring point No. 327488.
- 2 pcs. driver heads No. 327470.



Application example:
The drive heads are compensated by synchronised, mechanical support rams.

32 7455

Fast changeover of attachable driver heads. These heads and the exchangeable centres fit all base body sizes.

Face drivers, basic body

Face driver with spring-loaded centring point. The clamping of the centring point when the driver head makes flat surface contact ensures a backlash-free, stable clamping situation. High concentricity thanks to fully ground mechanical components, without centring point and driver heads, suitable for clockwise and anti-clockwise operation. Fully mechanical design with spring force. No leakages from hydraulic fluid.
Option for direct clamping on the head on raised collar in soft shaped jaws.

Suitable for: Lathe centres No. 321720, 321750 and 321770.

Optional extras: Driver heads No. 327470 - 327486 and old version No. 327601 – 327651, centring point No. 327488, taper sleeves No. 327492.

HAINBUCH Manual stationary chuck MANOK plus

Stationary chuck of solid cast. High clamping force, precision, and stiffness.
Ground face for horizontal mounting, integral stop.

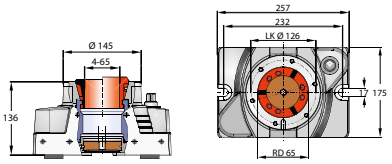
Suitable for:

Size RD65 – Clamping heads No. 329910 – 329946.
Size SE65 – Clamping heads No. 329970 – 329976.

Application: Versatile application e. g. machining centres, measuring machines, pillar drills etc.

Supplied with: Including 1 chuck key.

Note:	Use changing device No. 329832 size 65.



32 9960

HAINBUCH Clamping heads – SE version (Top 52/65)

Clamping heads, **round profile, in 0.5 mm increments. Please specify required clamping Ø with order.**

32 9974 – With transverse and longitudinal serrations for raw material.
32 9976 – Soft (reduced hardness of 40 HRC in the bore) for boring out.
32 9966/9970 – Smooth version for precision machining.

Advantage:
- **25% greater clamping force** than clamping head RD.
- No radial movement between clamping head and clamping element mounting, therefore immune to dirt.
- **Unique stiffness due to large seating area of the clamping segments.**

Application: Versatile application range, machining centres, measuring machines or pallet clamping.

Recommendation: **Clamping heads for special profiles to your individual requirements on request.**

Note:	Other taper sizes and shapes (e.g. square) and machinable blanks **on request!**

EDALMATIC tapping heads

- For machines with only one direction of rotation.
- Adjustable safety clutch protects tap from breakage.
- Length compensation by tension and compression, compensating for difference between machine feed and thread pitch.
- Automatic feed; ensures thread is true to gauge size.
- Automatic quick return traverse 1.6: 1.
- Right-hand and left-hand rotation possible without conversion.
- Accepts Rubber-Flex collets and quick-change sockets.

33 3500 – Size M3–M12 and M10–M30 with double clamping mechanism.

Application:
- For cutting threads **exactly true to gauge size.**
- Can be used without changing the set up for left-hand or right-hand threads, blind and through holes.

Supplied with: Including anti-rotation arm and for No. 333500 also 2 multi-range collets (rubber-flex), 2 spanners and 1 screwdriver for hexagon socket screws to suit the tapping head!

Optional extras:

33 3500 – Multi-range collets (Rubber Flex) No 333640. For a spare clamping device No. 333630 see the spare parts list.

33 3600 – Quick-change tapping chucks No. 335420 – 335640.

Note: Suitable tapered arbors No. 342500; 342600.

33 3500

Nut
for accurate adjustment of thread depth, ± 0.1 mm.

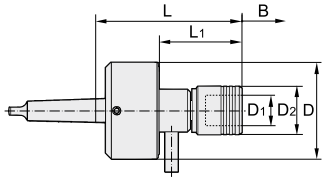
Garant Tapping heads for machines with only one direction of rotation

- With built-in reversing gears for automatic return. After reaching the thread depth, the unit automatically reverses by raising the machine spindle (low-wear ball system!).
- Accelerated return (approx. factor 1.8×n_{max}).
- Length compensation in tension.
- With anti-rotation arm.
- Maintenance-free
- For cutting right- and left-hand threads.
- With quick-change collet system.



Application:

Size 12/1; 12/2 – For automatic tapping on non-reversing machines with manual feed. For tapping through holes (with collets No. 335420) and blind holes (with inserts No. 335610).

Size 20/2–20/4 – For automatic tapping on non-reversing machines with manual feed. For tapping through holes (with collets No. 335430) and blind holes (with inserts No. 335620).

Optional extras: For quick-change tapping collets see: No. 335420; 335430 (**without** safety clutch), No. 335610; 335620 (**with** safety clutch).

Tapping chucks for machines with right-hand and left-hand directions of rotation

- **Double clamping** is achieved by 3 jaws which centre the tap shank and by 4 additional jaws which clamp the tap square drive.
- When set correctly, the **safety clutch** prevents tap breakage.
- Blind hole threads can be tapped down to the bottom.
- **The self-adjustment mechanism** compensates for misalignment errors between the machine spindle and the component.
- The flexible **length compensation** is effective on compression and tension. It prevents the thread being cut incorrectly with manual or power feed.

Application: For tapping internal threads on reversible drilling machines, turret lathes. Applicable horizontally and vertically for right-handed threads.

Supplied with: 1 chuck key.

Quick-change tapping chuck for right-hand and left-hand rotation

- Compact design, with flexible length compensation by compression and tension.
- Adjustable lead-in pressures for different materials and taps.

Application:
- To produce threads that are true to gauge.
- For right-hand and left-hand thread.
- For NC machines and machining centres.

Optional extras: See No. 335420 – 335660 for quick-change tapping collets.

Note:
- Quick-change tapping heads in **other shank types size M14 – M33 available on request.**
- Quick-change tapping heads **not suitable for internal coolant supply.**

With parallel shank

With ball bearing-mounted sleeve for smooth no–play length compensation.

Garant Synchro insert with ER collet base body

- Tapping and thread forming on machines with synchronised spindles.
- Minimum Length Adjustment: +0.5mm / -0.2 mm.
- Compensation for synchronisation errors, hence better thread quality and clear increase in tool life.
- For collet chucks and driven tools to ISO 15488 (DIN 6499).
- Suitable for left-hand and right-hand threads.

HOLEX Weldon element for thread tapping

Plain toolholder, hardened and ground with **quick-release coupling**. Internal square to take taps and transmit the torque. Clamping mechanism prevents the tap being pulled out.

Advantage:
- Attractively priced solution.
- Sturdy, slim version.
- Variation in the clamping and overhang lengths.

Application: To take taps and others in a Weldon arbor.

Weldon element with minimum adjustment for thread tapping

Tensile/compression compensation each of 0.2 mm by means of compensation element. Clamping of the Weldon element either by means of the drive flats or the compensation element.

Optional extras: Compensation element No. 335730.

Note: Minimum compensation function **only** in combination with No. 300415 and 335730. The standard Weldon chuck permits only rigid clamping, see No. 335740.

≤50 bar

Garant Quick-change tapping heads for synchronised spindles

- With **minimum length adjustment (MLA),** by means of a damping element.
- Increases tool life of taps/thread formers by up to 300 %.
- Internal coolant supply up to 50 bar.
- Secure clamping for ER collets in quick-change tapping collets.
- Radial run-out of shank taper to the tapping collet taper < 3 µm.

Application: On **machining centres with synchronised spindles.**
- For compensating the difference in pitch between tap and synchronised spindle.
- For compensating the pitch tolerances of taps.

Optional extras: See No. 308600 - 308806 for pull studs.
Coolant feed pipes for HSK, see No. 309880.
See No. 309890 for plug-in sockets for HSK.
Quick-change tapping collets and extensions, see No. 338120 – 338142.

HOLEX Tap extensions

- Long and extra long version.
- The **front end** of the extension acts as a collet. The collet is clamped to the tap by hand-tightening the knurled clamping nut.
- The drive torque is provided by the square drive.
- The **rear part** of the extension is to DIN, so that the extension can be mounted in quick-change tapping collets or ER tapping collets with a square drive.
  33 8425 – h6 shank with Weldon flat for use in Weldon/shrink-fit chucks or hydraulic chucks.
  33 8435 – With internal coolant supply.

Application: For tapping in confined places, such as recesses, offsets, sharp edges on jigs, extremely deep internal threads, or directly into casting walls.

Note: Alternative hexagon collet for fixing the tap available on request.

Garant Tap extensions

Suitable for: For mounting in quick-change tapping collets or ER tapping collets with a square drive.

Advantage:
- Time-saving exchange of taps with repetition accuracy and quick-change adapter.
- Almost any combination of extensions available, due to the identical diameter D_3 and drive square K_2.

Application: For tapping in confined places, such as recesses, offsets, sharp edges on jigs, extremely deep internal threads, or directly into casting walls.

≤80 bar

FAHRION® CENTRO|P SYNCHRO tapping chuck

- Extremely low axial forces for low flank pressure and perfect surface quality.
- Torsion damper and compensation mechanism in the circumferential direction.
- Depth of up to 150 mm can be achieved with ∅10 interference contour (for thread size M0.5-M3).
- Suitable for internal coolant supply of up to 80 bar.
- Suitable for taps and fluteless taps.
- Suitable for right-hand and left-hand threads.
- Suitable for blind and through holes.
- Minimum length compensation in push and pull direction.
- Drastically reduces the flank pressure on old and new CNC machining centres.

Advantage:
- Reliable processes thanks to smooth operation, even under torque load.
- Longer tool life for the tap and fluteless tap.
- Significantly smaller outer diameter than previously available.
- Significantly more internal cooling directly on the tool than conventional synchro chucks (for ER8).
- Concentricity is twice as good, for the lowest flank pressure.
- Damping when reversing the direction of rotation ensures fewer tool breakages.

Note: **Products No. 338131 – 338135 only when used with CENTRO/P collets (No. 309365 – 309372)**. The weaker the axial force, the better the quality, the lower the wear, the longer the service life, and the safer the process.

CENRO|P SYNCHRO chucks are characterised by particularly long and precise guidance of the shaft with consistently high FAHRION quality.

LLAMBRICH Keyless drill chuck made of stainless steel

- Self-clamping keyless drill chuck with high clamping forces.
- Very ergonomic, user-friendly.
- Ideal for the medical industry thanks to autoclave resistance.
- Made of highly corrosion-resistant steel.
- Highest quality and safety standards thanks to certification according to **ISO 13485**.
- Through-hole allows drills, reamers, pins and other tools to be used safely.

Application: For use in the chemical, food and beverage, medical and aviation industries.

SBF-plus self-tightening high-performance drill chucks with MT shank (single-piece)

34 1122 – **High performance** precision three-jaw drill chucks. High concentricity, keyless, self-tightening, high clamping force. Easily released by hand. Wearing parts hardened and exchangeable.

34 1115/1122 –
- Drill chuck and MT shank are a single unit.
- High concentricity, optimum stability.
- Easy and quick change due to short design, advantageous for confined working areas.

Standard:

34 1122 – **DIN 238**

Application:

34 1122 – For bench and pillar drilling machines, milling machines, lathes, for use with arbors No. 342300 – 342850 or directly on machine spindles.

Note:

34 1115/1122 – The self-tightening effect works only for clockwise rotation.

Garant Key-operated drill chucks with straight shank

- For clockwise and anticlockwise rotation.
- Slim design.
- Targeted delivery of coolant.

Advantage:
- Very flexible applications due to the plain shank.
- Optimum holding torques at the tool.

Supplied with: Torx chuck key with T-handle.

Self-tightening drill chucks – standard version

With drill chuck taper DIN 238

34 1425 – Simple, lightweight design.
34 1455 – **With clamping force protection (SKS)** for impact drills. For clockwise and anticlockwise rotation.

Application: For fitting to arbors No. 342300 - 342887 or directly on to the machine spindle.
34 1425 – Mainly for portable drills.
34 1400/1421 – For use on bench drills.

Keyless drill chucks

- **Keyless drill chuck** with self-tightening locking mechanism. No additional locking required (not even for impact drilling).
- Very ergonomic, user-friendly, hexagon flats for wrench assistance.
- Good concentricity.
- **Through hole version for right-hand and left-hand operation** (thread M5 or M6).

34 2204 – Single-piece drill chuck; the drill chuck can be opened with one hand when the spindle of the drilling machine is stopped. Extremely short design.

34 2200–2205 – Equipped with start inhibit.

34 2200/2205 Size 13-3/8; 13-1/2 – **Chamfers made of carbide** for wear reduction.

34 2207/2208 – Chamfers made of carbide for wear reduction.

Self-tightening drill chuck for hand power drills

- Automatic tightening whilst drilling, proportional to the cutting force (maintains the clamping force even under tough conditions!).
- Sturdy design (functional components of metal).
- **With retaining ring.**
- With clamping force protection(clamping and locking using only one hand!).

Application:
- For heavy-duty cordless and mains power drills.
- Cordless impact power drills up to 36 Volt.
- Reverse torque up to 50 Nm.

Note:
- **No through holes** – Drill chucks thus have to be secured tightly to the spindle.
- **General purpose** – with retaining ring for use on machines with / without spindle stops.

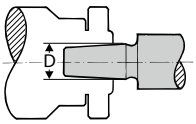
HOLEX Drill chuck arbors

Through hardened and ground. High long-term concentricity because swarf cannot be pressed into the hardened surface and no notches can occur from minor impacts.

Standard: Drill chuck taper **DIN 238.**

34 2300



Drill chuck arbors with straight shank

High precision version with plain shank.

Application: For mounting drill chucks on to milling machines, automatic system etc. The plain shank can be clamped in a **collet or in a milling chuck**.

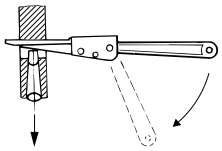
Semi-automatic drill drift

- One-handed operation without impact tools (avoids damage to spindle).
- Tools are released by a wedge effect.

Application: For Morse taper tools to DIN 228 with tang.



Type	35A **34 3850** Semi-automatic drill drift	for MT	Overall length mm
1-3	eShop	1 – 3	317
4-6	eShop ■	4 – 6	380

Taper cleaners and cylindrical cleaners

- Wide spacing for collecting swarf and dirt.
- Fleece is resistant to oil and emulsions.

Advantage:
34 3700/3705/3720/3730 – **Plastic version** non-warping, for high precision use. Fleece strips with additional grooves.

Application: For cleaning internal tapers / external tapers / internal bores on machine spindles, sleeves, and tool arbors (e.g. shrink-fit chucks / hydraulic chucks).

Note:
34 3700 – HSK sizes are compatible with HSK-E and HSK-F. For example: HSK-E 50 = size HSK50; HSK-F = always one size smaller, for example HSK-F63 is size HSK50.

Morse taper clamping sleeve

Through hardened, bore and external taper ground.

Standard: **DIN 6328**

Cutting dataa: For fitting into adjustable adapters angle heads, quick-change tapping collets, and multi-spindle machines where the spindles are close together.

Application: For mounting parallel shank taps and reamers with square drive.

Note: Not suitable for milling work!

Tool with parallel shank and square.

Garant SHRINK-FIT AND COOLING UNIT

- Unique design.
- Modular.
- Easy to use.
- Everything in its right place.

Ergonomic handle

High-power coil
- Shrink range ∅ 3 – 32 mm (carbide + HSS)
- Roller spring supported coil guide
- QTH = QuickToolHolder (integrated tool tray)

Shrink-fit tool length
up to 500 mm

Basic tool holders
No. 35 4225 – 35 4227

Including air cooling
at the shrink-fit chuck position

Intuitive new touch control

Modular design
- Shrink-fit station including air cooling No. 35 4210_SU1
- Cooling unit including cooling air supply No. 35 4215_CU1

Perforated panel
for using GARANT Easyfix systems No. 96 3001 – 96 3058.

Contact cooling
- Positively driven
- Contour-dependent

Storage for the cooling inserts

Tool storage

Stainless steel surface

Storage for screening plates
∅ 3 – 32 mm (no. 35 4240)

Garant Shrink-fit and cooling unit

Shrink-fit unit set SU1 / CU1

Shrink-fit unit with integral cooling at the shrink-fit chuck position.
Maximum shrink-fit tool length 500 mm.
Storage for screening plates.

Application:
- **For contour-dependent cooling.**
- For shrinking shanks of carbide and HSS in and out.
- Shrink range 3 – 32 mm.

Supplied with:
- 4 screening plates ∅ 3 – 32 mm No. 354240.
- Clamping ring.
- 1 pair heat-resistant gloves.

Optional extras:
- Suitable base cabinet No. 354291.
- Spare screening plates No. 354240.
- Basic tool mountings No. 354225 – 354227.
- Cooling adaptor for air cooling No. 354235 – 354236.
- **Cooling unit No. 354215 CU1.**

Very easy to use, including by selecting pre-parametrised shrink processes.

Cooling unit CU1 with active cooler

- Storage for cooling inserts.
- Stand-alone variant.
- 2 × positively driven contact cooler (no damage to the tool).

Application:
- **For contour-dependent cooling.**

Supplied with:
- Includes active cooler.
- 5 cooling inserts ∅ 6 – 32 mm No. 354260.

Optional extras:
- Suitable sub-frame No. 354290.
- Cooling inserts No. 354260 – No. 354279 in the spare parts list.

Note: 1.4 litres ethylene glycol (such as Glysantin G48) are required for operation of the active cooler.

Shrink-fit unit

- Fully automatic shrink-fitting: Perfectly clamped tools in seconds without the need for manual work.
- Maximum safety: No overheating or damage to the shrink-fit holders thanks to intelligent technology.
- Easy to use: Intuitive control using a graphical user interface (GUI) that enables fast, accurate working.
- Future-proof technology: Thanks to the USB port and optional RFID extension, you are ideally equipped for Industry 4.0.
- Durable and reliable: An investment that pays off through sustainable equipment management and service packages for air- and water-cooled models.
- Clamping range for carbide: Ø 3 mm – 32 mm / HSS Ø 6 – 32 mm / optionally up to Ø 50 mm with quick-change spool.
- Fully automatic cooling and subsequent drying of the shrink-fit chucks.
- Cool down shrink-fit chucks in seconds with the "Cool Down" technology without touching the hot part.
- Improved blow-off function for optimum drying of the shrink-fit chucks.
- Ergonomic working height of 1300 mm.

Application: For machine interface SK40; SK50; HSK-A63 and HSK-A100. Automatic shrink-fit unit with liquid cooling and drying.

Supplied with: 4 screening plates Ø 3 – 32 mm. 1 pair safety gloves. 1 litre coolant concentrate.

Note: Tool mountings available on request.

ThermoGrip® shrink-fit unit

- Easily enter shrink parameters by scanning barcodes.
- Energy-saving induction technology for a long tool life.
- Precise centering of the tool.
- Only a small amount of space required and suitable for mobile use.
- Very high holding force and lasting strength, even in oily environments.
- ThermoGrip® shrink-fit units have been synonymous with innovative premium shrinking equipment for over 20 years.
- Clamping range Ø 3 – 32 mm for all shrink-fit chucks T, TSF, TB (HSS Ø 6 - 16 mm / carbide Ø 3 - 32 mm).
- Integrated air cooling (cooling adapter available as an option).
- Maximum tool length for HSK-A63 450 mm.
- Ideal for workbenches.

Supplied with:
- 1 barcode scanner
- Magnetic strip set
- Shrink-fit chuck catalogue
- Safety gloves
- Screening plates
- Operating instructions

Optional extras: Screening plates No. 354241, tool mounting No. 354225 – 354227.

HOLEX Length setting gauge (manual pre-setting)

Tools are set to length from 20 - 125 mm and are held in the jaws by a clamping spring - no force needs to be applied.

Suitable for: All popular parallel tools from ∅ 3 - 20 mm.

Advantage: Pre-setting of tool free lengths up to 125 mm, saves time due to ease of operation, tools do not "drop through" e.g. for shrink-fit arbors, high stability, high degree of safety.

Application: Tools can be pre-set to 0.5 mm accuracy, suitable for all tool arbors (such as shrink-fit arbors, ER collets, Weldon arbors etc.).

		125
32Z 35 8400	Length setting gauge	eShop

Garant Data clip for tool arbors

- Flexible plastic with locking stop.
- Area provided for an adhesive label (size 25×54 mm).

Suitable for: **Type SK**– DIN 69871, JIS B 6339 (MAS-BT), ANSI.
Type HSK – DIN 69893, form A, B, E, F, T.

Advantage:
- For insertion into the toolchanger groove.
- After presetting the tools, the labels are printed off with the measured dimensions and stuck on to the data clip.

Application:
- No need for tedious handwriting and rubbing off the sizes.
- Clean and tidy (get rid of the paper chaos!)

Pre-setting device UNO

- **Large multi-touch screen** with intuitive and simple Microvision interface.
- Calibration device on the SK50 tool mounting.
- Simple storage for 3 adapters with SK50 inserts.
- Quick adjustment of both axes by release-by-touch **(X/Z)**.
- Fine adjustment of both axes (X / Z) using rotary wheel.
- Spindle with 4×90° and spindle brake.
- Camera with 32x magnification.

The device operates in conjunction with the optional Hoffmann Group Connected software solutions for use in production environments.

Application: For measuring and pre-setting tools at the machine in production or when planning work.

Supplied with: Thermal label printer with labels, simple modular subframe cabinet, measurement software in all major foreign languages, **commissioning and training included (1/2 day).**

Optional extras: The Haimer pre-setting devices are compatible with the GARANT reducers No. 354771; 354773; 354775; 354777 and 354779. Haimer reducers are available on request.

Commissioning and one-day training included

PRE-SETTING DEVICE UNO IN DETAIL

Technical data

- Repetition accuracy of +/- 2µm and concentricity 2µm.
- **Edgefinder** laser for finding the tool cutting edge quickly.
- Post processor for data transmission to the machine and editor for adapting the machine interface to the pre-setting device.
- Compatible with Hoffmann Group Connected Manufacturing. Windows 10 operating system.

Second camera in the lens carrier (355020 UPCAM, UAFCAM, UADCAM)

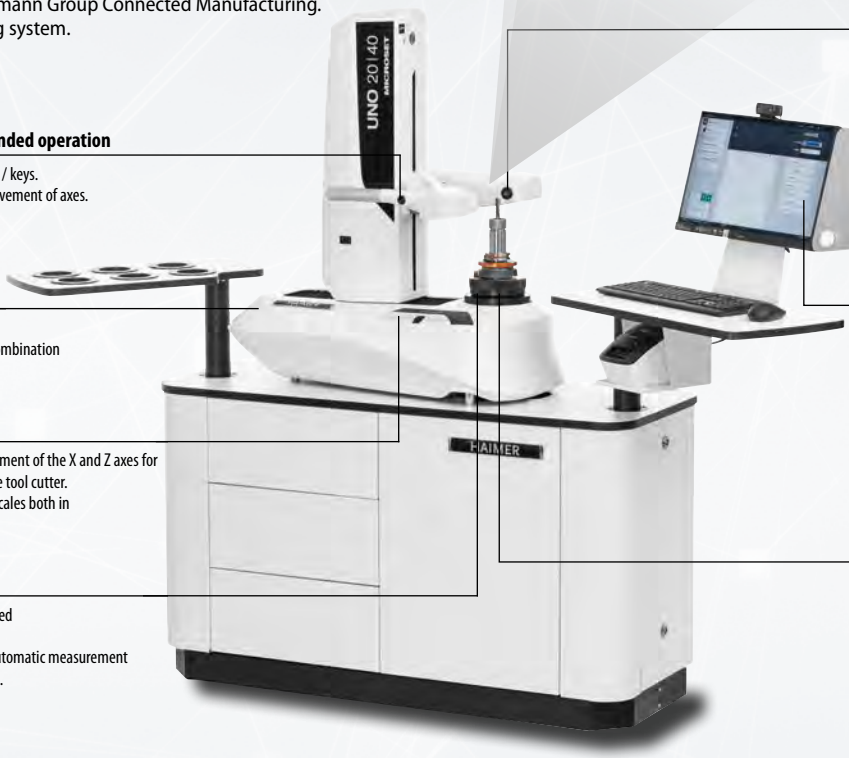
- For measuring the turning centre height of turning tools.
- Adjustable LED incident light illumination.

Digital camera

- Camera with 22-times magnification.
- Adjustable incident light for checking the cutting edge.

„Release-by-Touch" one-handed operation

- Easy to operate without buttons / keys.
- Intelligent sensor control for movement of axes.



Robust design

- Sturdy durable cast iron design.
- Thermally optimised material combination for better repetition accuracy.

Intuitive operation on up to 24" large touch screen

- High-performance processor with image processing system, Microvision.
- Integrated USB and LAN interfaces.
- External camera for taking photos of tools.
- Unlimited storage of zero points, tools, and tool lists.
- With all common measuring functions.

Manual fine adjustment

- µm-precision infinite fine adjustment of the X and Z axes for high-precision positioning of the tool cutter.
- High-quality Heidenhain glass scales both in X and Z axis.

SK50 ultra precision spindle, manual

- Vacuum clamping: pneumatic retraction of arbors with ISO taper size 50.
- Pneumatic spindle indexing at 4 × 90° and 3 × 120°.
- Spindle brake, pneumatic.
- Automatically operated spindle with auto-focus and automatic drive version.

Driven axes

- 355020 UAF, UAFCAM – motorised driven spindle (C-axis)
- 355020 UAD, UADCAM – fully automatic measurement with the driven axes X-, Z- and C.

UNO RANGE

Unique high-tech features in entry-level class.

As well as precision, speed and reliability, the UNO range impresses with numerous features. The timeless design and improved ergonomics set new standards. High-quality components, e.g. from Festo/SMC, Bosch, Heidenhain, IDS are used. Optionally, the UNO range offers you key benefits for top-level tool measurement in the expansion levels autofocus and automatic drive.

UNO premium (355020 UP, UPCAM) – the right solution for virtually all users. The highest standard for manual tool pre-setting. Operator-independent results, easy to use with the option of digital data transmission.

UNO autofocus (355020 UAF, UAFCAM) – the right device for demanding measurement tasks. Benefit from semi-automatic device handling for many tool measurements in a single plane.

UNO automatic drive (355020 UAD, UADCAM) – thanks to the fully automatic tool measuring, the high-end variant offers absolute operator independence and can be used with virtually no user knowledge. This promises maximum quality and time savings, even for complex tools on several planes.

Further UNO models available on request from the Hoffmann Group.

autofocus

- Automatic focussing of the cutting edge.
- Motorised spindles.
- With convenient modular cabinet and 24-inch, 10-point touch display as standard.

automatic drive

- For fully automatic tool pre-setting and measurement independent of the operator (CNC-controlled, 3 axes).
- With convenient modular cabinet and 24-inch touch display as standard.

(optional) ISS spindle

- ISS-U universal ultra precision spindle with integrated clamping system.
- Without loss of measurement path.
- Automatic adaptor recognition.
- Radial run-out ≤ 2 µm and high adaptor interchange accuracy.

VIO RANGE

Top comfort and functionality.

Optimise process reliability in your production thanks to the use of fully automatic measuring procedures. The holistic device concept enables integration into all production workflows, including existing ones. Maximum stability and precision. The FEM-optimised and thermostable cast iron design of the VIO linear range permits precise measurement results, even in the long term. Furthermore, highly dynamic linear drives with no wear characteristics ensure precise long-term quality. The parallel drive and guidance system ensures optimum distribution of forces and guarantees a measurement repetition accuracy of ±2 µm.

Highlights

- Low distorsion under maximum permissible load due to high rigidity
- FEM-optimised and thermostable cast iron design
- Maximum tool weight 160 kg
- Maximum tool length and diameter 1000 mm
- Quick, silent and highly accurate positioning thanks to unique linear drive (optional)
- Data exchange optionally via HQR Connect and HRFID Connect
- Fully automatic measurement cycles for very high operating comfort

VIO range available on request from the Hoffmann Group.

1. Second camera for measuring the centre of rotation (optional)

2 + 3. Fully automatic axle drive thanks to state-of-the-art linear technology

Pre-setting device VG1 – simple, quick, precise

- 15 inch touch screen, intuitive and simple operation via symbols.
- Calibration facility incorporated into the base mounting.
- Digital camera with 24 times magnification.
- Quick adjustment of both axes (X / Z) separately or together.
- Fine adjustment of both axes (X / Z).
- Spindle with 4×90° indexing and spindle brake.
- Radial and axial run-out error of the spindle: max. 2 µm.

Size VG1 – The device operates in conjunction with the optional Hoffmann Group Connected software solutions for use in production environments.

Advantage:

Size VG1 – By purchasing this device, you are gaining a compatible component for digitally networked production. Increased productivity can be achieved in conjunction with the respective modular software.

Application: For measuring and pre-setting tools at the machine or manufacturing cell.

Supplied with: Calibration device on the tool mounting, keyboard, storage plates, cutting edge cleaner, and measurement software in the major foreign languages.

Optional extras:
- Sub-frame cupboard No. 354767.
- Reducers No. 354771; 354773; 354775; 354777; 354779.
- Label printer No. 085505 size LW550.
- Labels No. 085565.
- Cover No. 354789 size 1.

Garant Pre-setting device VG Basic

- 10 inch touch screen, with Windows 10 operating system.
- Focus on intuitive and extremely easy operation.
- Fine adjustment of both axes (X/ Z).
- Precise SK 50 needle-bearing taper.
- Compressed air connection at least 5 bar.
- Digital camera with 17 times magnification.
- Radial and axial run-out error of the spindle: max. 5 µm.

Application: For measuring and pre-setting tools at the machine or production island.

Supplied with: SK 50 needle-bearing taper, measurement software in all major foreign languages and 3 metres of coiled compressed air hose with 1/4 inch coupling connector.

Optional extras:
- Base cabinet No. 354767.
- Reducers No. 354771; 354773; 354775; 354777; 354779.
- Label printer No. 085505 size LW550.
- Labels No. 085565.
- Calibration mandrel No. 355105 size 90 (if using SK 50 tools).
- Spindle clamping No. 355102 size 1.
- Cutting edge cleaner No. 354788.
- Cover No. 354789 size 1.

Accessories for VG Basic

Suitable for: VG Basic pre-setting device No. 355010.

Application:

35 5102 – For braking the SK 50 basic spindle.

Note:

35 5105 – The calibration mandrel is required when SK 50 tools are being used, because the spindle lacks its own integral calibration edge.

HOLEX Tool length pre-setting

Suitable for:

Size 40; 63 – HOLEX digital depth gauge No. 418742 300.

Size 50; 100 – Digital depth gauge No. L40510 size 1214 (bridge length 150 mm, measurement range 300 mm).

Advantage:
- Easy handling.
- Small footprint.
- Attractively-priced entry-level variants.

Application: Set the tool lengths directly at the machine.

Supplied with: Mounting block for depth gauge.

Note: All standard depth gauges can be used.

Size 50; 100 – A bridge length of 150 mm is absolutely necessary.

Assembly boy

- Fibre-reinforced polyamide for high stability.
- For horizontal and vertical tool mounting.
- Very easy to operate.
- **10 years warranty against breakage and cracking.**
- **With 4 retainer magnets** in the horizontal socket **(security!)**

Suitable for: **ISO taper arbor SK40.**

Advantage: No risk of damage to expensive tools.

Application: For assembly at the workbench.
For efficient setting up and stripping down of cutting tools and pull studs on tool arbors.

Garant Tool fitting fixture

Modular system consisting of base rails, flexible tool modules for locking on the base rails and a height adjustment/height gauge system.
All components made from high-quality anodised aluminium.

Advantage:
- Clean, tidy workstation – all assembly jigs in one place.
- Modular – base rail can be extended at any time through direct attachment.
- Flexible – two different tool modules (fixed or pivotable).
- Quick and easy handling – locking lever on the tool modules, moving of the setting device on the base rail.
- GARANT easyFix hole pattern on the rear of the base rail – attachment of storage facilities directly on the mounting device.
- 100% solid and secure attachment of the arbor – does not wobble, protects the mounting taper.

Application:
- Assembly/disassembly of all accessory parts of an arbor.
- Adopting/copying existing tool lengths.
- Measurement of the tool length.
- Small parts storage via GARANT easyFix.

Supplied with: 1 pc. GARANT easyFix wall mounting No. 955825 2, mounting bracket with cover for attaching the base rail, e.g. to a workbench.

Optional extras: Tool module No. 358575 and 358580, height adjustment No. 358585.

Note: The tool mounting device does not replace tool pre-setting.

REGO-FIX TORCO-BLOCK tool assembly measuring system

- Sturdy but lightweight body made from aluminium with **integrated torque measurement**.
  Display either as actually achieved torque or as a visualisation of the recommended tightening torque for a specific collet chuck type/clamping nut type, collet size or pull stud.
- For use with toolholders that have to be screwed to a specific torque, especially for **collet chucks**.

Suitable for: Tool arbors type **SK** (ISO 7388-1), **BT** (ISO 7388-2), **HSK** (ISO 12164-1), **PSC** (ISO 26623-1).

Advantage:
- Use of torque drive tools no longer necessary, commercially available assembly tools can be used.
- **Always apply the right** torque on the tool – do not over-tighten, but still ensure a secure grip.

Application: Unique, convenient and reliable tool assembly aid with integral torque display.
Works for all **pliers-based set-ups**.
Adapters available for all popular spindle interfaces.

Supplied with: Incl. indicator ring set No. 358647.

Optional extras: Adaptor No. 358646, indicator rings No. 358647.

Note: Order adaptor No. 358646 separately.

35 8645

Adaptor for arbors

Gentle aluminium body, fixing and clamping of the arbor with clamping lever or integral T-nuts.

Suitable for: Tool assembly measuring system No. 358645.

Advantage: Quick and easy fixing using clamping lever for HSK, PSC and BT arbors.
SK arbors are secured by means of the drive T-nuts.

Application: For holding and clamping various arbors of varying sizes in TORCO-BLOCK.
The interface adaptor can be changed within seconds using a hexagon L-wrench.

Note: Further adapters on request.

35 8646_40

Spare indicator rings

Indicator rings made from anodised aluminium, labelled with the corresponding information:
- Tightening range for the respective collet size (for the respective tool ∅).
- Tightening range for the respective pull stud.
- Torque display when a specific value is specified.

Suitable for: Tool assembly measuring system No. 358645.

Application: The indicator rings are positioned by a pin on the dial indicator.
Tighten the clamping nut until the display needle reaches the position marked on the scale ring for the respective shank diameter.

Supplied with: Incl. 5 rings for standard ER collet chucks, 3 rings for precision collet chucks, 1 ring for ball-bearing clamping nuts, 1 ring for general torque indication.

35 8647

Number of indicator rings		10
30W 35 8647	Indicator ring set, 10 pieces **for TORCO-BLOCK**	(eShop)

FAHRION® Assembly jig with rollers

Suitable for: For all popular tool arbors such as SK (DIN 69871), HSK (forms A, B, C, D, E, F), polygon shanks, MAS/BT (JIS B 6339), and CAT (ANSI B5.50).

Application: For easy and reliable clamping of tool arbors **at the collar** using rollers to mount and remove cutting tools – friction lock is self-clamping and ideal for HSK forms E and F, and also polygon shank arbors.

35 8695

Garant Assembly set-up station

The assembly station can be fitted to the workbench by means of two screws.
Clamping studs, e.g. No. 363190, can be used to position the clamping device or jig with pitch 52/96 or 80 on the assembly station, with locking and unlocking by means of the side bridge.
Set-up times are optimised with high process reliability when clamping workpieces or changing clamping jaws.

- Locking and unlocking without tools.
- **Reduction in set-up times.**
- **Ensuring safety at work.**
- **Patent pending.**

Suitable for:

Size 52/96 – Clamping device with pitch 52/96 and 80, e.g. Xtric No. 363000 and No. 363300.

Size 80 – Clamping device with pitch of 80 and ZeroClamp clamping studs size 90, e.g. ZeroClamp No. 360134.

Application: For mounting and removing workpieces in the clamping device and for changing or turning the clamping jaws.

INSIGHT KB Clear View Disk

With Insight KB, you can visually monitor the process in the machine room at all times.
The machine becomes easier to operate and the entire work process becomes much more efficient and safer, and the scrap costs are reduced.

- Beading effect due to a special coating.
- Low installation height of 0.3 mm.
- No screws required for installation, easy to apply thanks to a special adhesive layer.
- Includes installation kit.

Advantage:

- The position on the machine's protective screen can be freely selected.
- Minimal installation work required.
- Can be used flexibly, also suitable for curved screens.
- Easy to replace.
- No screws required for installation, easy to apply thanks to a special adhesive layer.
- Production can start immediately after it has been installed.
- Beading effect due to a special coating.
- Made in Germany.

Supplied with: 1 disk, 1 squeegee, 1 cloth.

Size SET – 3 disks (No. 358932 310), 1 squeegee, 1 cloth.

Note: The Clear View Disk is not intended for use in explosive atmospheres (ATEX). Dry machining and very sharp/hot chips, e.g. during high feed rate milling, can damage the surface and reduce its effectiveness.

PocketSense

Load cell for reliable, cordless checking of the clamping force.

Advantage:
- Compressive force shown directly on display and on end devices.
- Energy efficient thanks to standby mode and battery life of up to six months in two-shift mode.
- Compact design.
- Aluminium alloy housing.

Application: Perfect for regular inspection of vices.
Suitable for all vices with a minimum clamping width of 61 mm and compressive forces of 2.5 to 70 kN.

Supplied with:
- Includes case for storage.
- 2 pc. battery 1/2 AA (LS14250, 3.6 V).
- 1 pc. Torx wrench T10.
- 1 pc. Quick Start Guide.

Note: The two measuring faces of the load cell must be in full contact with the vice. Minimum jaw height approx. 38 mm.

Hoffmann Group Connected Tools

The Hoffmann Group and Allmatic present Bluetooth-capable clamping devices as well as an innovative, optional app for fast data transmission to a mobile device. Free of charge for iOS and Android.

35 8777
36 1303
36 1270_125CONNECT

1. Clamping force is initiated.
2. Clamping force is displayed in real time in the HCT app.
3. External clamping force monitoring during machining.

All products compatible with the HCT app are indicated by this pictogram.

Length setting gauge

For use on milling and drilling machines and lathes.
On all magnetic surfaces such as toolholders, lathe chucks, vices and measurement jigs.

Material: Anodised aluminium.

Advantage:
- Quick, stepless adjustment (thanks to scaling and knurled screw)
- Can be used without tools – for easy handling.
- Magnetic base – for super-fast mounting and sturdiness
- No unnecessary disassembly of things like toolholders in order to replace a tool.
- Compact helper in inaccessible places.

Application: For setting tool lengths or as an end stop for the workpiece length.

Application examples

Cross beam overhang	mm	33	

Garant Position and run-out check device

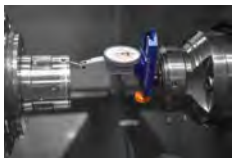
- Compact design.
- Precision dial comparators can be exactly adjusted using the adjustment screw.
- Precision dial comparators are suitable for vertical or horizontal use.
- Cylindrical attachment in various diameters, or quick fixing of the inspection device using a magnet.

Advantage:
- Efficient measurement of position and run-out in a short time.
- No laborious fiddling with stands and dial indicators.
- Achieve greater process reliability by regular checking.
- Easy handling.
- Fewer machine stoppages and longer tool lives.

Application: For checking the axes, run-out measurement, determination of positions (such as toolholder, workpiece).

Supplied with: Supplied with case with foam, test device, precision dial comparator, attachment magnet, cylindrical attachment mount, mirror for reading the measured value, hexagon key L-wrench.

35 8980



Example for turning:
- *Axis calibration (such as the position of the headstock or tailstock)*
- *Calibration of the revolver position or fitted toolholders*
- *Determining radial run-out / tumbling of driven tools*

Example for milling:
- *Checking radial run-out: Component central, tool, etc.*

Adjustment travel		mm	30
31E 35 8980	Position and run-out check device		eShop

HOLEX Zero setter

Special hardened steel.

Size 50M – With magnet.

Function:
- Level the spring-loaded probe face with the reference face of the body (e.g. using a straight edge) and set the dial indicator to –0.25.
- Place the zero setting device on the workpiece and feed the tool down on to spring-loaded probe face until the dial indicator reads 0. The tool is now positioned exactly 50 mm (± 0.01 mm) above the workpiece to be machined (dimension for input into machine controls).

Application: For setting tools (e.g. end mills) to zero and for determining the reference point of the machine spindle.

Supplied with: Wooden case, dial indicator, measurement report and instruction manual.

Note: For spare dial gauge No. 359086 3/40 see the spare parts list.

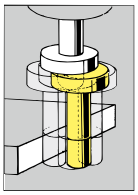
Edge finder (straight shank)

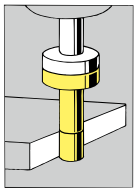
The contact point has a flexible connection to the body via a spring, with an **alignment accuracy of 0.01 mm.**
All parts fully hardened and ground.

Size 10/4 – With stepped contact point 10 and 4 mm ∅.
35 9005 – Non-magnetic.

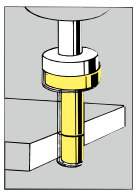
Application: For alignment of component reference surfaces or edges.
Spindle speed approx. 600 rpm.



1. Start up – edge finder runs eccentric.



2. Edge finder touches the workpiece and runs true.



3. Edge finder jerks aside = reference point.

Size 6 and 10

Edge finder with indicator light

The spring-mounted spherical tip protects the unit from damage if contact is too violent.
Functional parts hardened and ground.

35 9078 – Contact accuracy ± 0.005 mm.
35 9070/9075 – Contact accuracy ± 0.01 mm.

Function: When **the spherical tip contacts** a **metallic component,** batteries cause the lamp to light = Detection of the reference point.

Application:
- **Alignment** of component reference surfaces or edges.
- **Determination of bore centres** to the machine spindle.

35 9075/9078 – When making contact in the Z axis, the reference length has to be determined using the pre-setter and taken into account.

Supplied with: Supplied with special battery No. 081560 A23.

HOLEX Optical zero setter

Special hardened steel.

Function:
- Approach the contact face with the tool upright. When the LED lights up, the reference dimension 60 mm (±0.01) has been reached. A safety spring range of approx. 2 mm is provided for overdrive.
- Size **60M** is magnetic for horizontal use.

Application: For zeroing tools and for determining the machine spindle reference point.

Supplied with: With test certificate and instruction manual.
Special battery No. 081560 size 357.

Note: For use only on electrically conductive workpieces. Not waterproof.

Centre bore
optimum for turned parts.

Precision centre finders

The dial indicator remains in the required position during the working process.

- With fixed cylindrical clamping shank ∅ 16 mm.

35 9610 – ■ With adjustable slides for a large working range.

Accuracy: **0.005 mm centring or working accuracy.**

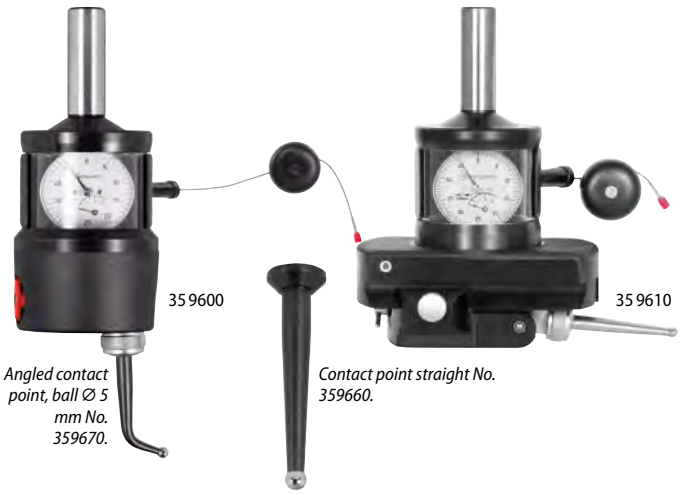
Application:
- For **horizontal and vertical** use.
- Alignment of bores, shafts, plane surfaces, reference edges and grooves centrally to the working spindle.
- Checking the concentricity of working spindles.

Supplied with:

35 9600 – **C OS –** Contact point with ball ∅ 5 mm No. 359660 and curved contact point with ball ∅ 5 mm for external ∅.

35 9610 – **C III –** Contact point with ball ∅ 5 mm No. 359660 (also applicable for external ∅).

Optional extras: Contact points, see No. 359650 – 359670.



Angled contact point, ball ∅ 5 mm No. 359670.

Contact point straight No. 359660.

Centre finder – with non-rotating dial

Sturdy metal casing suitable for workshop use with dial indicator ∅ 42 mm (scale graduation 0.005 mm). Holding rod can be fitted on the left or right. Centre finder can be used vertically and horizontally. Overall height without contact point 140 mm. Recommended speed approx. 50 – 100 rpm. Working range up to 300 mm. Centring accuracy 0.02 mm.

Application: Determining the centres of bores and shafts.

Supplied with: Centre finder including retaining bar, retaining magnet with connecting cord, 3 internal contact points, 3 curved external probes and 1 sprung centring tip (centre contact point).

Garant Contact point calibration aid

- Very easy calibration of the 3D contact point.
- Completer calibration process in X, Y and Z in just a few minutes.
- Protection against collisions and spindle damage by the spring pin.
- Very easily fixed to the to the worktable by means of a magnetic stand.
- Highly accurate and consistent calibration results.
- The carbon casing ensures shock-proof characteristics, high-quality design and temperature resistance.

Advantage:
- The spring pin avoids spindle damage when the unit is blocked out.
- Easy handling and enormous saving of time.
- This functions for all manufacturers.
- Calibration in a single operation and without additional equipment such as setting rings and gauge blocks.

Application: For calibrating the 3D contact point.

Supplied with: Supplied in a case with foam, calibration aid with magnetic stand, nut spinner for removing the spring pin, T-wrench for stopping or unlocking the spring.

Procedure:
- *Move the spindle nose or calibrated tool to the sprung pin and lock it with the side clamping screw.*
- *Use a contact point to probe the position of the pin.*
- *Unscrew the pin and perform diameter calibration within the integral setting ring dia. 25 mm.*

IP 67

Garant Digital 3D edge finder

- High accuracy and linearity. Suitable for measuring components, and capable of measuring over the entire working range.
- Independent of machine controls.
- **Very easy to read due to combined display:** Digital display gives exact measured value.
- **LED indicates the status of the probing process: green= 0.000 (green LED flashes dynamically when approaching the zero point, becomes static upon reaching it), red= overrun.**
- Convenient and simple concentricity adjustment.
- Large working range in all directions (x, y, z : 6 mm).
- Compact metal body
- Predetermined breaking point
- Dust-tight and waterproof (IP67)
- Reading changeover function 0.005/0.001

Application: Precision measuring device for milling and spark erosion machines. For determining component zero-points, measurement of lengths, bore centres and reference edges. Determining tool lengths for lathes, setting up turning tools on the rotational centre (taper contact point).

Supplied with: Supplied with battery CR2 and contact point 359505 size 4

Note: suitable contact points No. 359505.

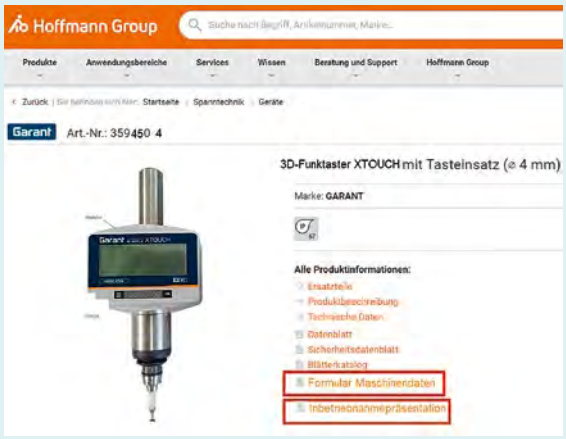
Garant Cycle-controlled and radio-transmitted tool and workpiece measuring

We need you to submit your machine tool data to us so that we can supply you with NC cycles that match your machine tools or controllers.
Proceed as follows:

Step 1:
Download the "Machine data" form in the eShop after inputting article number 35 9400_1 or 35 9400_4.



Step 2:
Fill in the downloaded form.

Step 3:
Send the completed form to **xconnect@hoffmann-group.com**.

Step 4:
We will send you the cycles configured for your machine and controller.

Step 5:
See the operating instructions for how to proceed!

XCONNECT, XTOUCH and XCONTORL only possible in combination with the following controllers:

- SIEMENS 840D sl from software status 2.6
- SIEMENS 828D from software status 4.3
- HEIDENHAIN ITNC 620/640

Garant XCONNECT data memory stick

Suitable for: Tool breakage monitoring XCONTROL No. 359400 1 and 3D radio probe XTOUCH No. 359450 4.

Advantage:
- Quick commissioning without hardware changeover and service engineer use.
- No need to interfere with the machine tool operating system!

Application: For transferring the values measured with XTOUCH and XCONTROL to the machine control.

Note: Signals from both items XCONTROL No. 359400 1 and XTOUCH No. 359450 4 can be received using **1 pc.** XCONNECT stick. **The necessary machine information must be submitted to us using the form. We will then provide you with the NC cycles configured for your machine.**

310 35 9455	XCONNECT data memory stick	(eShop)

IP 67

Garant XTOUCH digital radio 3D edge finder

- **Possibility to transfer the measured values in combination with GARANT Xconnect No. 359455 1.**
- **Suitable only for Siemens and Heidenhain controllers. The machine requires a functioning USB port on the control panel.**
- High accuracy and linearity. For **fully automatic** determination of component zero-points, measurement of lengths, bore centres, reference edges and axial alignment.
- Convenient and simple concentricity adjustment.
- Large working range in all directions (x, y, z = 7 mm).
- Compact metal body.
- **Dust-tight and watertight = IP67.**
- Predetermined breaking point.
- Simple menu navigation.
- Quick commissioning without hardware changeover and service engineer use.
- No need to interfere with the machine tool operating system!
- Minimisation of rejects.

Application: Automatic transmission of the measured values into the machine control by GARANT Xconnect No. 359455 1.
For fully automatic determination of component zero-points, measurement of lengths, bore centres, reference edges and axial alignment. Manual operation without wireless transmission (without XCONNECT) is also possible.

Supplied with: Supplied with battery CR2 and contact point No. 359505 size 4.

Optional extras: XCONNECT data memory stick No. 359455 1.

Note:	Suitable contact point No. 359505 4. The item is permanently installed on a machine and can only be used on another machine through another cycle request.

Garant XCONTROL tool breakage monitoring and length measurement

XCONTROL – tactile tool contact point for **tool breakage monitoring** and **tool length measurement**.
Measurement accuracy +/- 0.01 mm and repetition accuracy +/- 0.005 mm.

- **Suitable only for Siemens and Heidenhain controllers.**
- The machine requires a functioning USB port on the control panel.
- For use only in conjunction with the XCONNECT No. 359455 1.
- **Dust-tight and watertight = IP67.**
- Quick commissioning without hardware changeover and service engineer use.
- No need to interfere with the machine tool operating system!
- Drills from ∅ 0.3 mm can be measured or tested.

Application: For tool breakage and process monitoring in an automated machine tool or for multi-machine operation.
For tool length measurement and automatic transmission of data to a machine tool.
Automatic transmission of the measured values into the machine control by GARANT Xconnect No. 359455 1.

Supplied with: Supplied with battery CR2.

Optional extras: XCONNECT data memory stick No. 359455 1, clamping claw No. 363081 80.

Note:	The item is permanently installed on a machine and can only be used on another machine through another cycle request.

air turbine spindles

High-speed spindles

Air-powered high-speed spindle, constant speed under load 25,000 – 65,000 rpm. depending on the version. Power up to 1kW.

Application: High-speed spindles allow higher cutting speeds and feed rates. They allow above all the use of tools with small diameters (6 mm).

Supplied with: High-speed spindle, collet, collet clamping nut, wrench, sealing plug, air filter, connection hose.

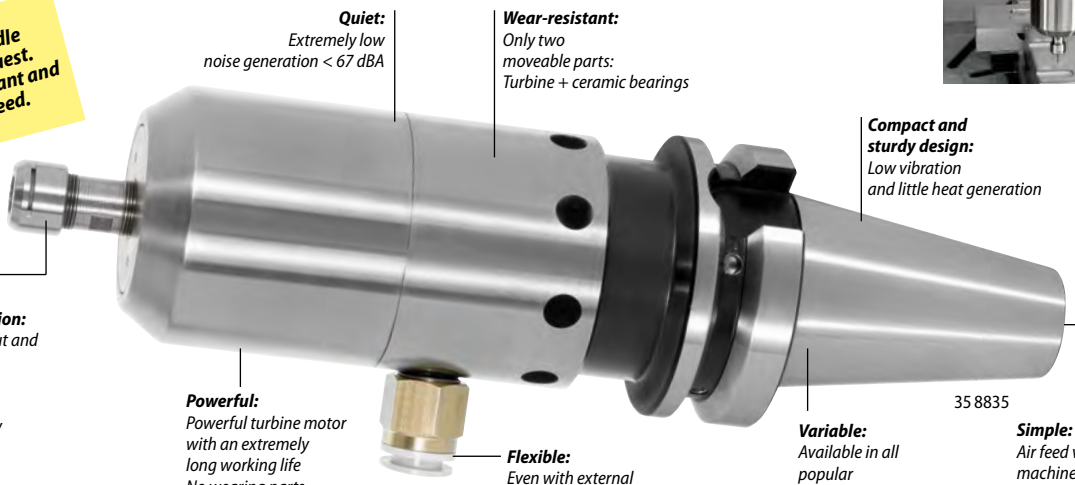
Optional extras: Tool-change turret for automatic tool-change. Required only for **external** air supply - available on request.

Note: Use clean dry compressed air at approx. 6.2 bar.
Further spindles available on request: all commonly-used shank versions, different performance classes and speeds.

35 8825
Device for automatic tool changing on request.

35 8865

High-speed spindle available on request. With through-coolant and adjustable speed.



Quiet: *Extremely low noise generation < 67 dBA*

Wear-resistant: *Only two moveable parts: Turbine + ceramic bearings*

Compact and sturdy design: *Low vibration and little heat generation*

High precision: *Clamping nut and high-quality ER 11 collet Very high concentricity < 5 µm*

Powerful: *Powerful turbine motor with an extremely long working life No wearing parts such as gearbox, brushes etc.*

Flexible: *Even with external air intake*

35 8835

Variable: *Available in all popular shank versions*

Simple: *Air feed via the machine spindle. Operating pressure 6.2 bar*

© AirTurbine Technologie Inc. 2016. All rights reserved.

- **Higher machining speed** *with smaller tools.*
- **Continuous use** *due to integral air cooling. No standstill times.*
- **Environmentally friendly.** *Patented airflow regulation minimises air consumption.*
- **Protects the machine.** *Rotation is generated by high-speed spindle – the machine spindle remains stationary.*
- **Longer working life** *of the tools.*
- **Very good surface quality of the workpieces.** *Less rework required.*

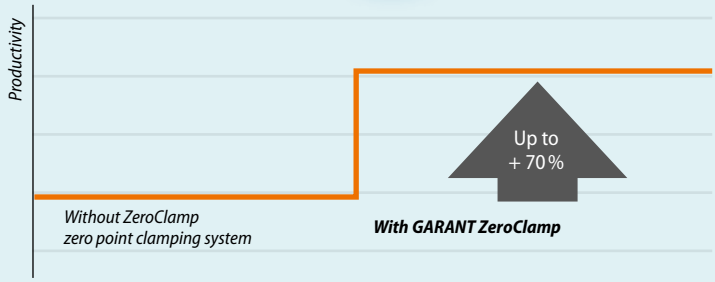
Garant ZeroClamp zero point clamping system

More than 10 years of GARANT ZeroClamp – choose the right system!

Increased productivity



Cost saving

Time saving

An overview of the critical advantages:

Thermal symmetry

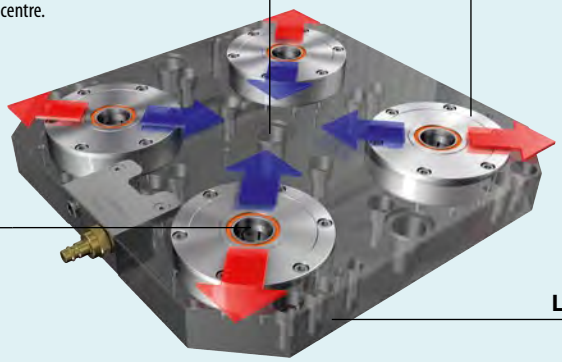
Absolute zero point
Compensation for thermal expansion is always towards the centre.

Compensates pitch errors
up to ± 0.05 mm per pot:
Fixed zero point in the centre of the table.

Precise

Precision taper
On insertion, the resiliently sprung taper of the socket expands and ensures a flat face contact seating.

HSK principle
Functions like an HSK tool taper.
Free of radial run-out and axial flat face contact seating, with repetition accuracy < 2.5 µm.



Simply brilliant

Only 1 stud type
no zero, floating or free studs.

Powerful
12.5 kN to 40 kN.

Compressed air connection
Only 5.5 bar required to release the clamping studs.

Low-maintenance

Sealed system
no hydraulic oil and unaffected by chips.

See our current supplementary brochure for further information.

One base – one type of stud – very great flexibility

The zero point clamping system for a wide range of applications.

From standard applications through to automation with just a single type of stud

- Good process reliability.
- No tilting if not level.

- User–friendly even for heavy and asymmetrical components.

Garant ZeroClamp, standard clamping system

All bores for T-slot pitches of **63, 100, 125 mm.**
Centre bore ∅ 25 H7 to receive a centring set.

Material: **Base plate** of high-tensile aluminium, surface treated.
All components of the clamping pot of stainless or corrosion-resistant steel.

Application: For vertical/horizontal machines.

Optional extras: Clamping stud No. 360025,
Connection block No. 360017 size 12808 / 12805.

Note:	Base plates with clamping pot dia. 138 mm are also available with self-locking clamping pots on request.

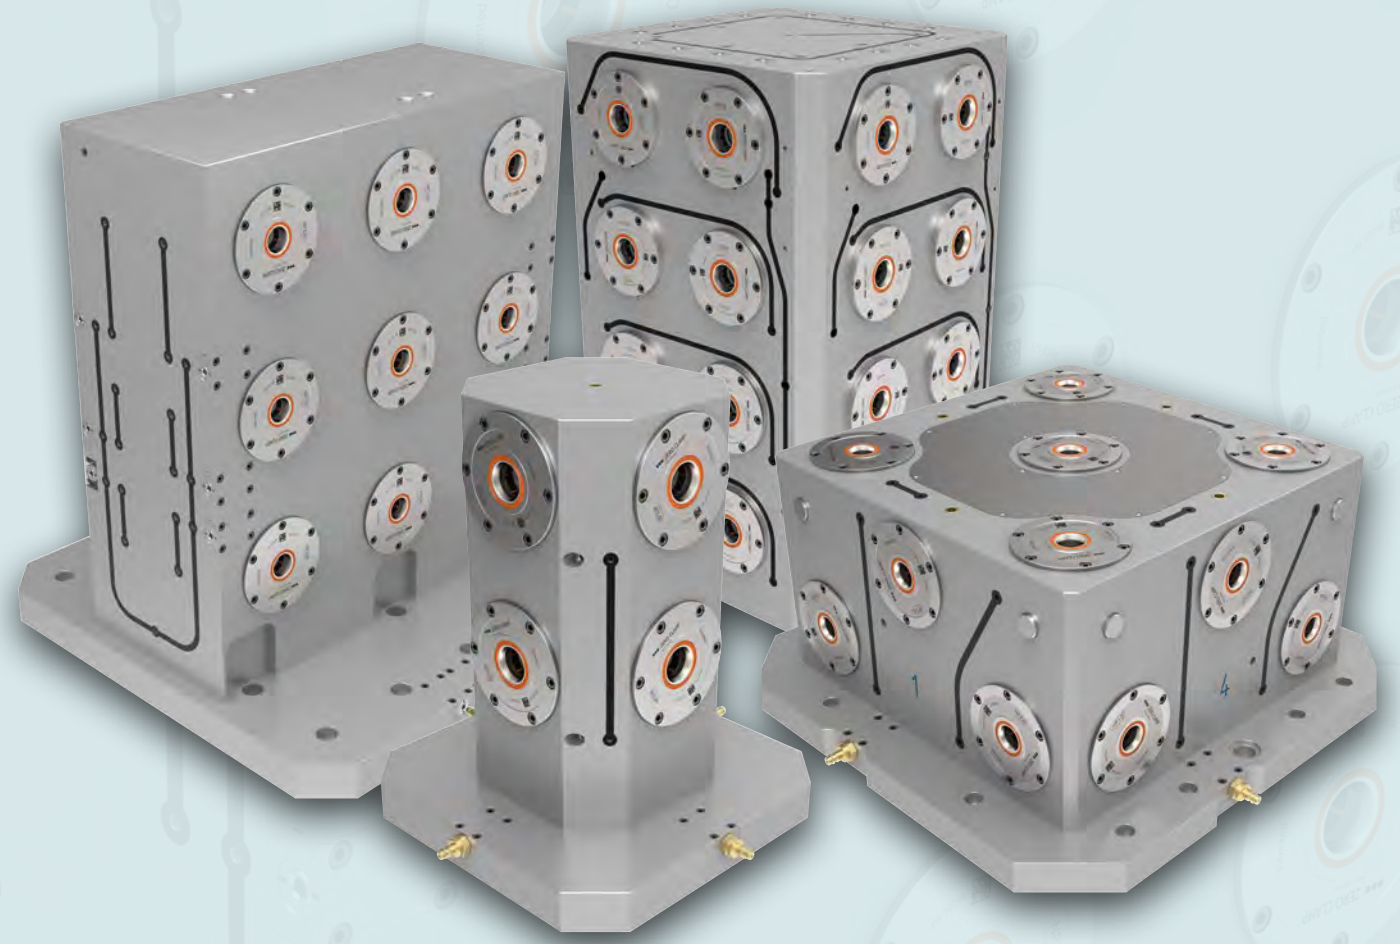
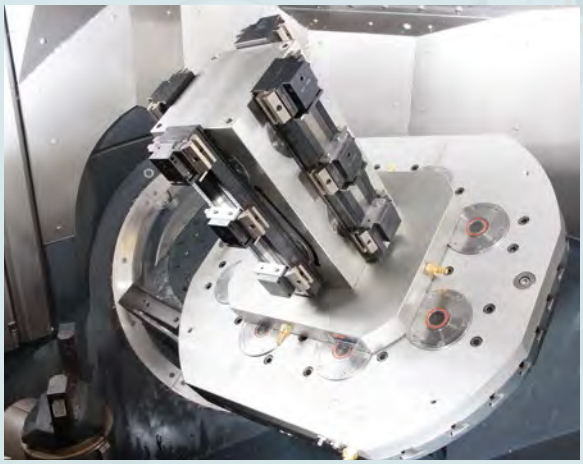
Garant Clamping pillars with zero-point clamping system

Design your own clamping pillar to suit your requirements!

The clamping pillars of the zero-point clamping system are flexible in their dimensions and can be adjusted up to a height of approx. 900 mm. They offer individual adjustment options for clamping pot diameter, pitch and pot spacing to meet specific requirements.



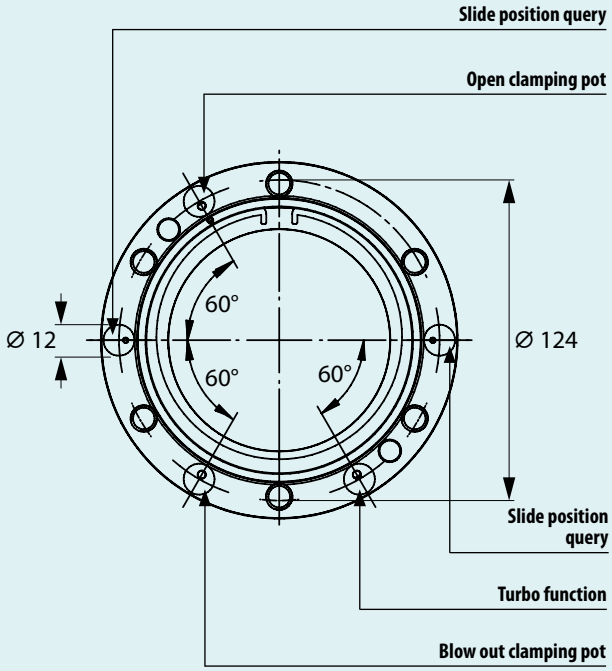


- Freely selectable dimensions of the clamping pillar (max. height approx. 900 mm), the clamping pot diameter, the pitch and distances of the pots.
- Separate air connections available on each side.
- Clamping pots can be controlled individually or in groups.
- Indexed pots for clamping with only one pot.
- Ideally suited for clamping multi-point clamping rails, 5-axis clamps, NC clamps and centring vices.
- Ideal for machining on a horizontal milling machine.
- Can be clamped directly on the machine table or on a zero point clamping system.
- Can be controlled via the rotary feed through in the machine table.

Garant ZeroClamp zero-point clamping pot – self-locking

When your requirements become more demanding.

Operating principle:
A piston recessed in the slide area and equipped with drivers arranged at an angle of 15° which engage in the slides.
Piston stroke motion moves the clamping slides radially, locking the clamping stud by applying the spring force of the 14 locking springs.



Tried-and-tested benefits:
- Compatible with existing installations.
- Repetition accuracy <2.5 µm.
- Zero play thanks to HSK principle.
- Thermal symmetry due to pre-loaded clamping cones.
  These always compensate for pitch inaccuracies towards the zero point.
- Only one type of clamping stud is required, which simplifies logistics.

Advantages over standard clamping pots:
- 30% greater force/stroke volume.
  Clamping slides motion is linear and does not need to be divided into rapid stroke and clamping stroke.
- Blow-out function, turbo function and jaw position query as standard.
- No free studs or sword stud required, but still works the classic way with these types of studs

Garant Self-locking clamping pot

- **6 bar** compressed air connection required to unlock.
- Radial compensation 0.1 mm.
- Maximum pin retraction 1 mm.
- Repetition accuracy < 2.5 µm.
- All components made of stainless or corrosion-resistant steel.

Application: For individual incorporation in the clamping system. For retrofitting on existing base plates for greater holding force.

Optional extras: Clamping stud No. 360025 size 16M8, 16M10, 18M12, 18M16 and 25M10.

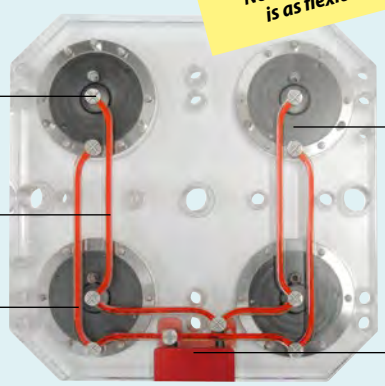
Indexing hole available		no	yes	no	yes

Unique advantages:

- Individual fitting
- Adaptation to special requirements
- Virtually limitless applications
- User-selected variable pitch
- Cost-effective solution
- Especially versatile for jig and tool making



Garant Flexible clamps

- Steel base body with integral solid steel taper.
- Mechanical clamping mechanism.
- Tightening the lateral clamping bolt axially draws the component in with the respective clamping stud via 2 clamping wedges, and clamps it.
- Can be secured using steplessly adjustable clamps, T-nuts or zero point clamping system using clamping studs No. 360066.
- Pre-drilled for the zero point clamping system.

Application: Simple and exact positioning on the machine table. Clamping of complex components, e.g. For mould making.

Optional extras: Clamping stud No. 360025 for size 120, torque wrench No. 656050 size 60, height element No. 360068.

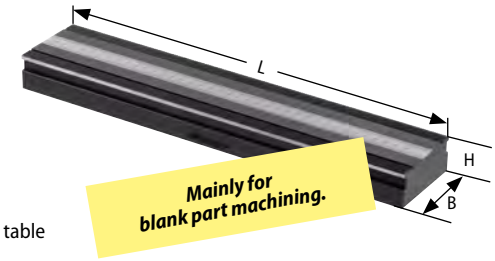
Garant Multi-point clamping rails 80 mm - accessories

- All functional faces precision ground, pairing accuracy 0.03 mm.
- Base rail and jaws case hardened.
- Compact modular design, **high clamping force up to 20 kN,** maximum tightening torque 25 Nm.
- Attachment hole pattern for **GARANT ZeroClamp zero point clamping system** (200 mm pitch) as standard, can be mounted on clamping plates or grid plates, or using table clamps.
- Ruler inset into the top face permits repeatable positioning of the clamp attachments in the serrations of the clamping rail.
- Easily clamped using a torque wrench.



Application:
- **5-face machining on multi-axis machining centres.**
- As a cost-effective clamping solution for use with the GARANT ZeroClamp zero-point clamping system or with pallet and automated systems, or directly on to the machine table or clamping towers.

Optional extras: Clamping jaw variants, magnetic strip, workpiece backstops see No. 360084 to 360096. Torque wrench No. 656050 size 60, clamping stud No. 360025 size 12M10, clamping claw No. 360127

Garant 3-way extension base for centring vice

Clamping of the centring vice on the three-way extension base via clamping claws.
Double slot per clamping side, meaning the centring vices can be turned by 90°.
Secured via GARANT ZeroClamp zero point clamping system (holes 18M16) or via T-nuts directly on to the machine table.

Suitable for: Centring vice No. 360133.
Material: High-tensile aluminium, hard anodised.
Supplied with: Including 6 T-nuts for alignment

Note: Use clamping set No. 363102 size 80 to install the GARANT Xtric No. 363000 size 50 or size 80.

Also available as 4-way extension base on request.

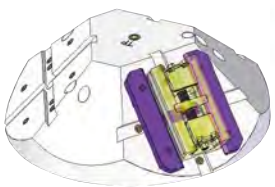
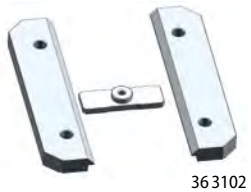
Application: For fixing the Xtric to the three-way extension base No. 360156.





363102

Type		80
310 36 3102	Alignment and clamping strip set, Xtric	(eShop)

Garant Centring vice and accessories

Centring vice for flexible applications.

- Absolute operational reliability thanks to enclosure.
- High repetition accuracy 0.02 mm.
- Variable central alignment ± 0.02 mm.
- Functional faces hardened.
- Sturdy design of tool steel, surface protection by brief exposure nitriding.

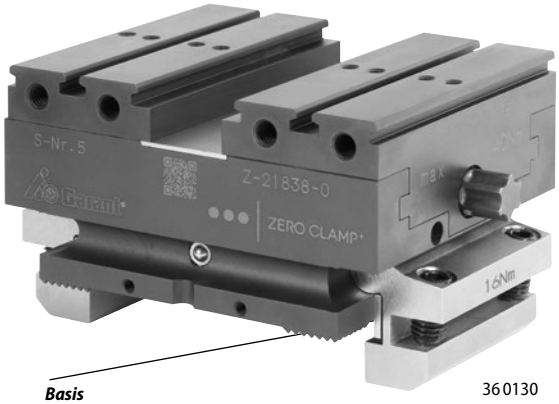
Suitable for:

36 0130 – Multi-point clamping rails No. 360080 and 360110.
36 0133 – Directly on the machine table, exchange pallet or 3-way extension base No. 360156.
36 0134 – Automation extension base No. 360164.

Application: Ideal for 5-face machining, perfect for clamping blank parts.

Supplied with: Supplied with socket No. 642700 size E12.
36 0133 – 2 table clamps.
36 0134 – Supplied with 4 clamping studs size 90.

Optional extras: Types of jaws No. 360135– 360151.



360130

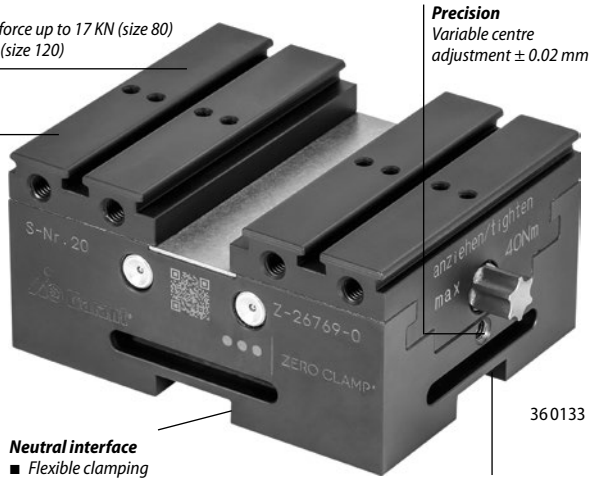
Basis
suitable for multi-point clamping rail 80 mm or 120 mm.

Quick change
with just a few simple movements, can be turned through 90°.

Powerful
Clamping force up to 17 KN (size 80) or 25.5 kN (size 120)

Form fit *of the jaws on the base body*

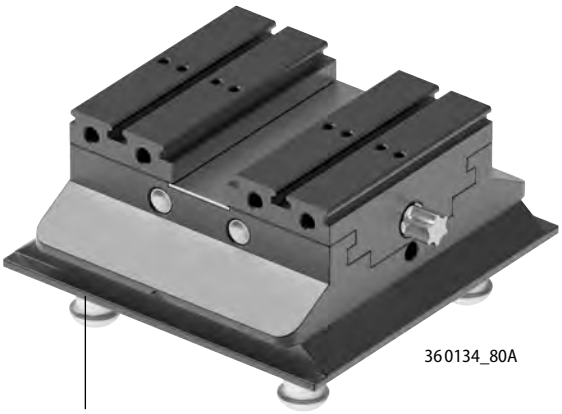
Precision
Variable centre adjustment ± 0.02 mm



360133

Neutral interface
- *Flexible clamping on the machine table*
- *Extension bases or pallets*
- *Grid plates*

Precise location slots
Quick placement on the table or grid plate.



360134_80A

Automation vice in combination with an automation extension base

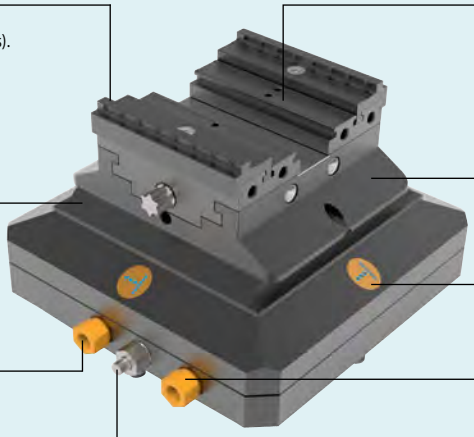
For use in automation.

Range of jaws
- Identical to previous centring vices No. 36 0130 and 36 0133.
- Clamping of blank parts (Gripp top jaws) and finished parts (carbide top jaws).

Clamping studs
- Clamping is achieved using 4 clamping studs.
- Draw-in force of 12.5 kN per stud.
- The same principal of operation as for the clamping pots.
- Absolute zero point is maintained thanks to thermal symmetry.

Opening

Bleeding



Automation vice 36 0134 in combination with extension base 36 0164.

Proven technology
- Enclosed spindle - no need for cleaning.
- High clamping accuracy.
- Clamping force up to 17 kN (size 80) or 25.5 kN (size 120).

Basis
- Integral M8 tapped holes ∅ 12H7 and 80 mm pitch.

Attachment hole
- Supplied with cover cap.

Monitoring the back pressure
- This is done using the Zerobot gripper, by rotary feed-through of the machine or manually.
- Back pressure can be checked.

Garant Top jaws for centring vices

Suitable for: Centring vice No. 360130 – 360134.

360140 80/120 – Clamping height = 4 mm.
360135/0136/0141 – Clamping height = 4 mm.
360140 Size 80L; 120L – Pre-impression of the serrated contour necessary.
Material: Tool steel with brief exposure nitriding.
Supplied with: Fastening screw.

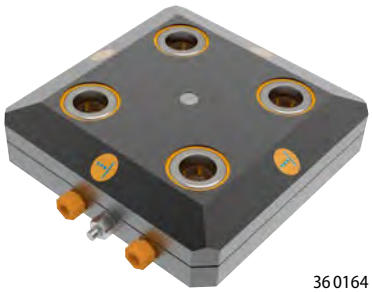
Garant Extension base for automation vice – pitch 80 mm

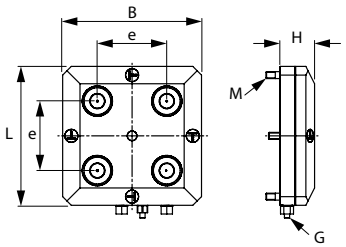
50 kN holding force from 4 sets of clamping pot components size 90, pitch 80 mm.
The same principle of operation as the GARANT ZeroClamp clamping pots.
Meaning there is thermal symmetry towards the centre. Manual or automatic clamping and release possible.
Clamp using spring pressure, release using compressed air (6 bar).

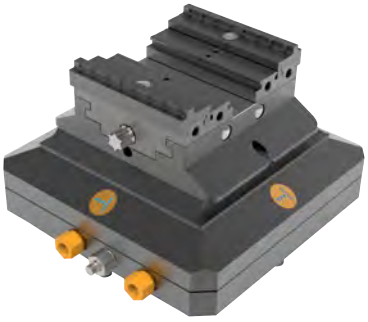
Suitable for: Centring vice no. 360134, height element no. 360166.

Application: For all vices and pallets with ZeroClamp clamping stud size 90.



360164





Application example

e	mm	80
Thread M		M8
Thread G	in	1/4
Number of location holes for clamping studs		4

Garant Accessories for automation extension base

High-tensile aluminium, black anodised.
Gripper groove on side 8×6 mm including central locating hole for automated applications.

Suitable for: Extension base no. 360164.
Size 136 – Centring vice No. 363000 size 50 and size 80 and No. 363300 size 75.

Application:
Size 136 – For adapting a clamping device with a pitch of **52 mm** to a pitch of **80 mm.**
Size 180 – Unrestricted surface on an **80 mm** pitch for individual processing or for use as a pallet.

Supplied with:
Size 136 – 4 × fastening screw,
4 × grub screw M8,
2 × locator bushing,
4 × clamping stud No. 360025 12M10/90.
Size 180 – 4 × clamping stud No. 360025 12M10/90.
Size 180 – 4× grub screw M8.

Note:
Size 136 – Compatible with all brands of clamping device with pitch 52 mm.

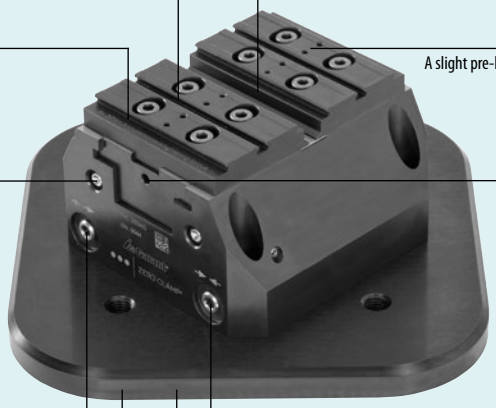
The pneumatic centring vice – powerful and universal

Active adjustable clamping element best suited for automated production. Can also be operated manually!



Precision dovetail slides

Clamping stroke up to 8.5 mm

Clamping force
Steplessly adjustable up to 22.5 kN.
(Arithmetical sum = 45 kN)

Safety
A slight pre-load (approx. 60 kg) is maintained even if the compressed air supply fails.
This ensures secure positioning of the workpiece.

Grease nipples

Adjustable stroke
5 mm per side.

Air supply for clamping
Manual operation with air pressure gun possible.
Maximum 9 bar.

Air supply for opening

Base plate
For 4 clamping studs (18k6 M16) cross pitch 200 mm.
With additional Schunk interface.

Air delivery
Air delivery in automatic mode via the 4-channel clamping pot.

Garant Pneumatic centring vice

- Adjustable stroke + 5 mm per end.
- Clamping force steplessly adjustable up to 22.5 kN. Arithmetical sum = 45 kN.
- Even if the compressed air supply fails, the centring vice maintains a slight (approx. 60 kg) pre-load, to ensure secure positioning of the workpiece, such as when a shuttle table is being used.

36 0180/0181 Size 100/4; 160/4 – With base plate, for higher support torque and maximum stability.

Advantage:

36 0181 –
- Incl. pressure reservoir with double-acting non-return valves.
- **Continuous monitoring** of clamping and release pressure and of battery state **via WiFi**.
- No rotary union necessary.
- Clamping and release by compressed air via robot.
- Connection block no. 360191 for horizontal or vertical compressed-air transfer available.

Application: For centralised clamping of components. Suitable for **automated operation** with 4-channel clamping pots, even with side connections.

Optional extras:

36 0181 – Connection block no. 360191.

Size 100; 100/4 – Range of jaws no. 360135 - 360151 size 80.
Size 160; 160/4 – Range of jaws no. 360183 - 360187.

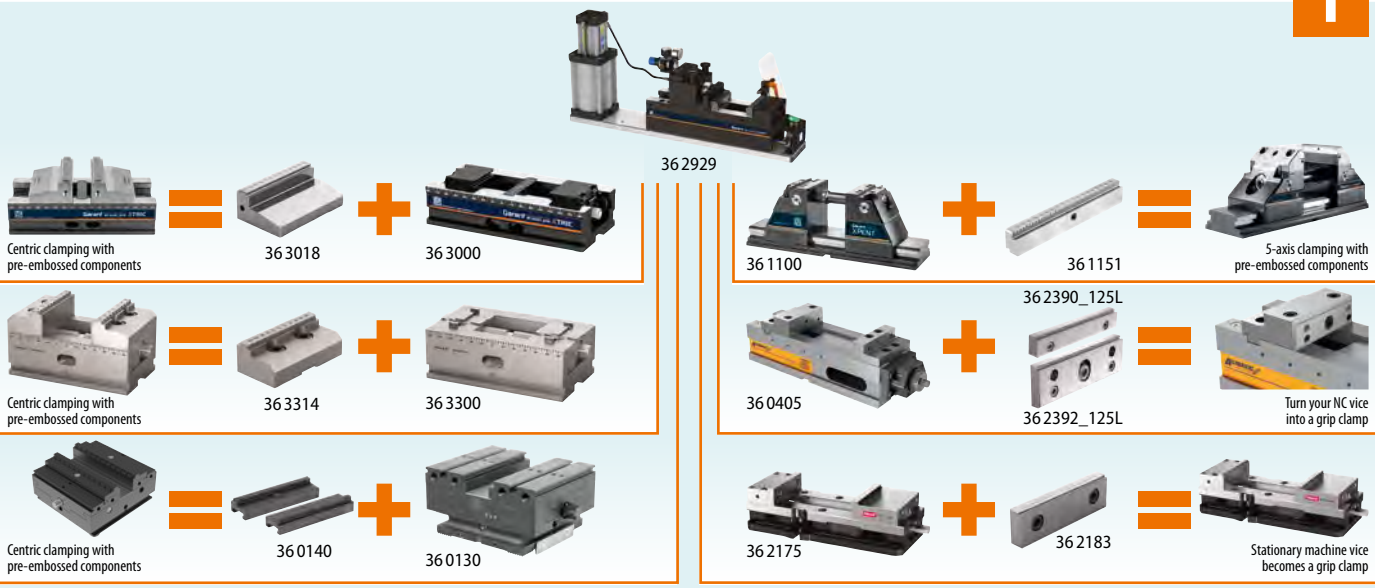
Incredibly varied clamping options for pre-embossed components



Garant XGRIPP embossing station

- Embossing materials up to 45 HRC (tensile strength 1450 N/mm²) possible.
- Max. Embossing force 180kN (18 t), linear embossing force progression.
- Adjustment of the pneumatic embossing pressure between 0.5 and 6.5 bar.
- Quick adjustment at 30 mm intervals.
- Fine adjustment by knurled screw.
- Everything mounted on a base plate – conforms to CE, can be used safely and in a compact manner as a single unit.
- The operating button is directly on the embossing station and thus there are no pneumatic hoses outside the station.

Advantage: Positive clamping in gripper jaws even at low clamping force
Application: For pre-embossing especially hard or unstable components.
Supplied with: Base plate, pressure converter, embossing station, protection plate, stamping jaws, workpiece backstop, support strip.
Optional extras: Centre marking No. 362934 size 1, checking set for stamping jaw wear No. 362936 size 1.

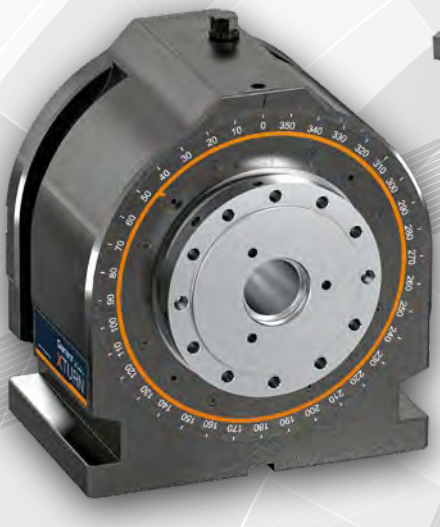
GARANT XTURN: ALWAYS PUTTING IN A GOOD TURN.

For **economical multi-side processing** on a 3-axis machine: The GARANT Xturn helps you upgrade your existing machine. Additional axes provide new machining options and greater production capacity to your existing stock of machine tools.

For further information and options, ask your technical adviser!

GARANT Xturn with GARANT ZeroClamp clamping pot.

GARANT Xturn with rocker and 4 GARANT Xtrics.



GARANT Xturn with clamping cube, elevation set and 8 GARANT Xtrics with centre jaw.

GARANT Xturn with cross beam, elevation set and 8 GARANT Xtrics.

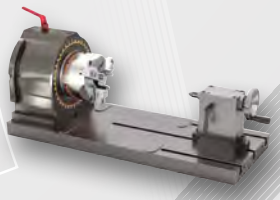
GARANT Xturn with clamping cube, integral ZeroClamp clamping pot, elevation set and 6 GARANT Xtrics.

GARANT Xturn with three-jaw chucks and opposite tailstock.

Functional principle of machine indexing:

When the indexing tool is changed and is retracted to the intended indexing points, the interlocking is released and the Xturn can be indexed in 1° increments. When the indexing tool has been brought out into the indexing position, the Xturn locks itself automatically, and the machine can immediately recommence processing.

Operating principle of manual indexing:



By actuating the ring spanner, the interlocking is released and the Xturn can be indexed manually in 1° increments. When the ring spanner is released, the Xturn locks again and work can continue

The most important features:

- Can be used on any machine.
- Spacing 360 × 1.
- Indexing accuracy +/– 10 seconds.
- Repeatability +/– 4 seconds.
- Manual or CNC-controlled indexing is possible using an indexing tool in the machine spindle.
- Can be used upright or horizontally.

The benefits to you:

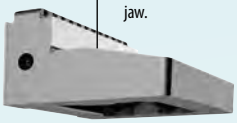
- Increase in machine running times due to multiple clamping.
- Allows quick machine loading and unloading.
- A wide variety of tools in one base device.

Garant Centric clamping to perfection for your automation

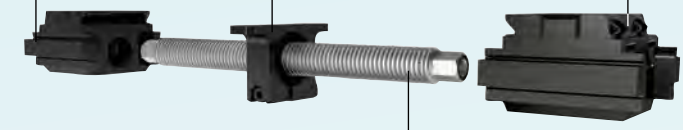
Top jaws with optimised contour design
- Optional coating for process reliability in machining.
- Hardened and underside precision milled.
- Very good repetition accuracy < 0.01 mm.

100 % centred
- Centring adjustment for perfect centring.

Various different top jaws
- Finished parts are clamped using pairs of parallels.
- Raw materials and finished parts are clamped using the same jaw.



Spindle nut with or without pivot function
- The size code P stands for pivoting jaw.
- The pivot function nut permits pivoting by ± 2°.
- Use of the pivot function nut offers increased security for components such as sawn parts.
- Greater precision when using rigid version.



Clamping jaw quick-change system
- Clamping jaw quick-change in seconds without tools by clicking onto the dovetailed slide.

Different base lengths
- Choose the right length for every machine.

Clamping edge
- Perfect for clamping claws.

Chromium-plated spindle
- Linear clamping force development
  - XTRIC50: 40 Nm generate 16 kN clamping force
  - XTRIC80: 85 Nm generate 25 kN clamping force
  - XTRIC125: 132 Nm generate 32 kN clamping force
- Internal clamping available by switching the spindle nuts.

Laser-engraved graduations
- For pre-positioning the clamping jaws.

Interface for automated applications
- Freely usable interface.
- Also serves as a cleaning opening.
- Also serves as an **endutec** interface
- Size 50H suitable for Häberle automation systems.
- Size 50XSE suitable for Erowa ITS50.
- With 363085 148P adaptable to Erowa ITS148.

Longitudinal slots
- Quick and easy alignment on the machine tool table.

Centring adjustment with pin wrench

Special underside
- Hole pattern suitable for the "LANG" positioning system. (Grid scale XTRIC 50 and 80: 52 mm; XTRIC125: 96 mm)
- Can be clamped to the GARANT ZeroClamp using the adapter.

The clamping jaw quick-change system: for more clamping options

* for each clamping point ** no longer a centring vice

Garant XTRIC centring vice

- Very good accessibility and perfectly symmetrical.
- Fully hardened and precision milled on the underside.
- Clamps raw materials and finished parts with the least possible backstroke of the jaws / component.
- Supplied with holes for LONG positioning system, **can be adapted to GARANT ZeroClamp and Erowa ITS148 (size 50 and 80) using an intermediate plate.**
- Jaws can be changed without using tools. The clamping range can be changed by reversing the jaws.
- Interface for automated applications.

Suitable for: Top jaws No. 363010 – 363045.

Application: Perfect for 5-face machining. Centred clamping.

Supplied with: Base rail, spindle, spindle nuts, **spindle cover No. 363083**.

Optional extras: Hexagon screwdriver No. 627424 size 5, pin spanner No. 628600 size 2, torque wrench No. 656050, socket No. 642229, stepless adjustable clamps No. 363081 80 and 361165 CS1, GARANT clamping stud No. 363190, adapter plates No. 363079, 363080, 363085. Height extension base No. 363090 (in conjunction with No. 363079). Assembly station No. 358595 52/96.

Note:

HOLEX Centring vice

- Very good accessibility and perfectly symmetrical.
- Fully plasma-nitrided and precision milled on the underside.
- Clamps raw materials and finished parts with the least possible backstroke of the jaws / component.
- The clamping range can be changed by reversing the jaws.

Size 75; 120 –
- With interface for automated applications.
- Including holes for LANG positioning system, **can be adapted to GARANT ZeroClamp and Erowa ITS148 (only No. 363300 75) via intermediate plate.**

Suitable for: Top jaws No. 363310 – 363324.

Application: Perfect for 5-face machining. Centred clamping.

Supplied with: Base body, spindle, spindle nuts.

Optional extras: Torque wrench No. 656050, socket No. 642229 12 (for size 75), No. 642229 13 (for size 120) clamping claws No. 363081 80 and 361165 CS1, GARANT clamping stud No. 363190, adapter plates No. 363079, 363080, 363085 height extension base No. 363090 (in combination with No. 363079) assembly station No. 358595 52/96.

Note:
Size 75; 120 – Suitable top jaws No. 363310 – 363324 are not included in the scope of supply. Clamping situation S2 arises by reversing the jaws.

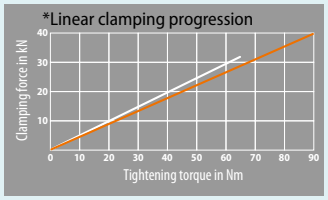
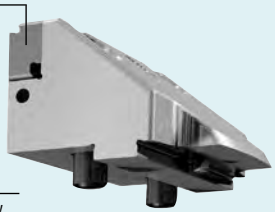
Garant The Xpent family – a unique programme in perfection

Top jaws with optimised contour design
- Coating for process reliability in machining.
- Hardened and ground.
- Very good repetition accuracy < 0.01 mm.



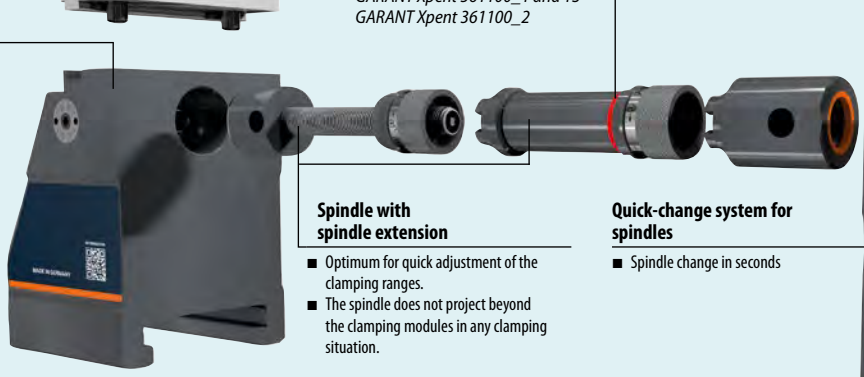
Front jaws
- Large variety
- 2 clamping steps on each jaw



Red security ring

For visual detection of incorrect assembly.

Clamping modules
- Lower risk of collisions due to reduced interference contours.
- Symmetrical
- Convex shape
- Both clamping modules can be moved

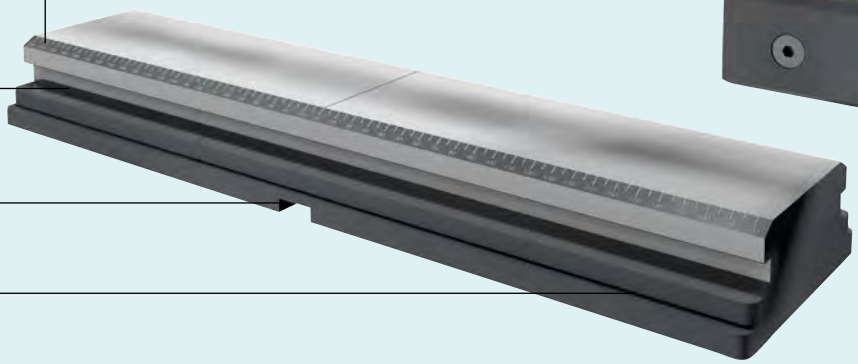


Spindle with spindle extension
- Optimum for quick adjustment of the clamping ranges.
- The spindle does not project beyond the clamping modules in any clamping situation.

Quick-change system for spindles
- Spindle change in seconds

Scaling
- For pre-positioning the clamping modules.

High precision guide
- The clamping modules do not tilt when moved.



Transverse slots
- For aligning to the machine table.

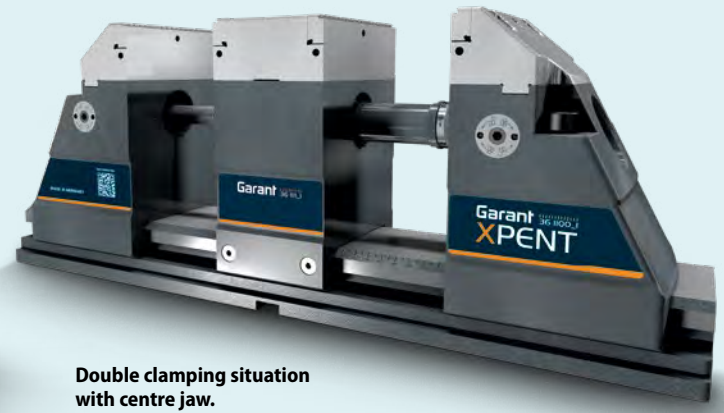
Clamping lip
- For steplessly adjustable clamps.

Garant The Xpent – Master in the ecosystem

Standard clamping situation.

Clamping precise to the µ when pulled down (finished part machining).

Maximum clamping range due to reversed clamping modules.



Double clamping situation with centre jaw.

Garant XPENT 5-axis vice sets

- Very good accessibility and perfectly symmetrical.
- Flexible modular clamping system.
- All functional faces hardened and ground.
- Clamping force up to 40 kN at 90 Nm torque.
- Both clamping modules can be positioned individually on the base rail.
- Variable clamping and adjustment range.
- Repetition accuracy < 0.01 mm.
- **Including holes 18M16 for zero point clamping system pitch 200mm.**

Application: Perfect for true 5-face machining.
In conjunction with various jaws it can be used for conventional, smooth-faced clamping and clamping of unfinished parts.

Supplied with: Base rail, spindle, spindle extension, crank / hexagon screwdriver (for type 1S), fixed clamping module, mobile clamping module.

Optional extras: Clamping modules No. 361105 – 361110, centre jaw No. 361111, base rails No. 361115, spindle No. 361119, spindle extensions No. 361120, stepless adjustable clamps No. 361165, torque wrench No. 656050 size 120, screwdriver bit No. 643329, workpiece back-stop No. 360094, top jaws No. 361123 – 361138.

Note: **Not supplied with matching top jaws No. 361123 – 361137 and front jaws No. 361140 – 361151. Clamping situation S4 requires a further spindle extension No. 361120. To ensure perfect tool lubrication, we recommend the use of multi-purpose grease No. 083592 PLUS.**

Welcome to the 5th dimension!

Garant XPENT modular system – individually configure your 5-axis vice.

The 5-axis vice has a modular design. The key components are the clamping modules No. 361105 – 361110, base rails No. 361115, spindle No. 361119, spindle extensions No. 361120 and the top jaws No. 361123 – 361137.

Clamping modules — piece

All functional faces hardened and ground.

Suitable for: Base rails No. 361115, spindle No. 361119 and top jaws No. 361123 – 361138.

Note: You will need a 5 AF screwdriver bit for spindle locking.
36 1105 – You will need a hexagon screwdriver bit (type 0 = 8 AF, type 1, 1S+2 = 10 AF) for the attachment screws.

Garant Quick-change adaptor plate for XPENT

Hardened and ground. Fastening screws.

Suitable for: XTRIC top jaws No. 363010 – 363045 in size 125.
Material: Hardened steel
Application: For use of **XTRIC top jaws size 125** on the XPENT size 1S, 1 and 2.

Note: Clamping width cannot be increased by rotating the clamping pillars in combination with the adaptor plate.
Important: Max. 72 Nm = 32 kN.

Garant Pull-down system

Extremely accurate finishing of the sixth side in the 5-axis clamp due to pull-down on both sides.

How the pull-down works:
After the clamping force has been introduced, the workpiece is clamped in parallel onto the base rail via the shims using the movable wedge elements.
Physical riding up of the jaws is therefore corrected.

Garant Accessories

Top jaws for pull-down system — piece

Hardened and ground

Application: Pull-down system in conjunction with shims No. 361161 and pull-down inserts No. 361162.
Optimum for machining the 6th face, because the workpiece is pulled down on to the base rail by the pull-down insert and shim.
Shims of 5, 10 and 15 mm available

Closure stud and sealing cap

Suitable for:

36 1174 – Sealing pin for top jaws (10 pieces) and Tee-bolts No. 361135, 361126, 361133, 361130.

36 1175 – Sealing cap for top jaws (4 pieces) No. 361123-361125, 361127-361129, 361131, 361134, 361136; 361138.

Material: Plastic

Application: To protect the screws and screw heads against chips and cooling lubricants, and provide increased worker protection when cleaning.

Note:

36 1174 – Can also be used for screw head with 8 AF and 10 AF for GARANT and Allmatic standard jaws.

TeleCentric 5-axis centring vice

- Optimum for use on 5-axis machining centres.
- Conventional clamping and gripper clamping can be performed.
- Telescopic spindles and obstructive contours remain unchanged.
- Simple centre-reference programming with no displacement of the zero point.
- Accessibility of the workpiece irrespective of the clamping span.
- Symmetrical design = workpiece remains central and parallel - the dimensions of the material are distributed symmetrically.
- Thanks to the quick-release fastening, pairs of jaws can be changed within 10 seconds.
- Constant clamping force thanks to the low-maintenance telescopic spindle.
- Supplied as standard with 25H6 M10 mounting holes for zero-point clamping system with 200 mm pitch.
- Integral scaled ring for fine adjustment of the centre position.
- Clamping force 30 kN at 45 Nm linear.

Supplied with: Hand crank, Quick Start Guide.

Optional extras: Torque wrench No. 656050 size 120, hexagon screwdriver bit No. 643330 size 14, top jaws No. 361258 – 361264, clamp No. 360750 size 125/160, alignment and fixing set No. 360530, clamping stud No. 360025 size 25M10 or 25M10/138.

Size 125 – Top jaws No. 361258 125 and 361260 125, additional optional accessories on request.

Size 100; 70 – Top jaws No. 361258– 361260, clamps No. 360750 size 125/160, alignment and fixing set No. 360530, clamping stud No. 360025 size 25M10 or 25M/138.

TeleSense 5-axis vice

- Optimum for use on 5-axis machining centres.
- Constant clamping force thanks to the low-maintenance telescopic spindle. Interference contours remain unchanged.
- Jaws can be changed without using tools thanks to quick release fastener.
- Supplied as standard with 25H6 M10 mounting holes for zero-point clamping system with 200 mm reference module.
- Clamping force 40 kN at 50 Nm linear.
- Maximum flexibility: **Universal quick-change jaw No. 361275** for a wide variety of applications; thus reducing set-up time and requiring less force. **Compatible with the mobile jaws of Centro Gripp, T-Rex, NC8 and TITAN 2 via jaw adapter No. 361285.**
- It is possible to measure the clamping force with all compatible jaws thanks to the integral measuring unit (size 125CONNECT) in the spindle. Transmission range up to 20 m. Quick and easy change of the battery. Operating temperature between 10 °C and 40 °C. QR code on the nameplate for quick access to technical information, accessories, spare parts and service.

Size 125CONNECT – ■ Conventional clamping and gripping clamping with **intelligent clamping force monitoring**.
■ Monitoring of the clamping force during clamping and machining by means of an integrated electronic measuring system. Display directly on a robust and splash-proof display and via wireless transmission to the end device (via Bluetooth® (BLE)).

Supplied with: Hand crank, Torx T10 key, Quick Start Guide.

Optional extras: Torque wrench No. 656050 size 120, hexagon bit socket No. 643229 size 10, top jaws No. 361275 – 361285, clamping claw No. 361289, clamping stud No. 360025 size 25M10 or 25M10/138; jaw adapter No. 361285, Gripp strip No. 361280, spindle extension No. 361287. Universal quick-change jaw

- Jaw made of hardened steel.
- Clamping of blanks and pre-machined parts (parallel, round and unshaped) – also with Gripp and pull-down clamping.

Suitable for: TeleSense No. 361270.

Feature:
- Can be used as a stepped jaw, shape jaw (turned for round parts) and with a pre-screwed Gripp strip for clamping workpieces.
- Can be used with all Gripp inserts of the Titan 2 series (except for Gripp inserts round h5.5).

Optional extras: Gripp strip No. 361280.

Note: Can be used with all Gripp inserts of the Titan 2 series (except for Gripp inserts round h5.5).

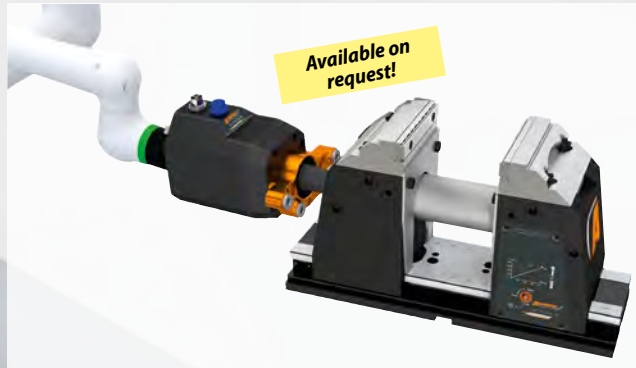
ALLMATIC CLAMPING SOLUTIONS OF THE FUTURE.



RoboBuddy

- Automate mechanical vices.
- No costly retrofits of the machine table.
- Fast commissioning.
  (Industrial data and robot interfaces)
- Used for NC8/Titan2
  and CentroLite series.
- Save the settings
  of up to 256 clamps.

AccuClamp

- Electro-mechanical, battery-powered automation system for machine vices.
- Can be connected to NC controller via OPC UA.
- Can be retrofitted to ALLMATIC vices of type LC/TC/NC8 125 mechanically.
- Runtime of 16 hours and charging time of 1 hour.

Configure your clamping tower!

Clamping towers at a glance

- 57 standard variants.
- Clamp 2 to 8 workpieces.
- For blanks and pre-processed workpieces.

Step 1: Determine the workpiece.
Step 2: Planned set-up of clamping tower.
Step 3: Determine the base plate.

The result

- Fully planned clamping tower for your specific needs.
- 2D drawing and CAD file.
- Direct link to quotation creation.

You can find the clamping tower configurator here
https://hog.tools/towerconfig

NC8 NC high pressure vice

Compact size: Optimum ratio between clamping range and overall length. The clamping force can be pre-set **without using tools**: **in 11 steps:** Jaw width 90 mm, **in 4 steps:** Jaw width 125 / 160 / 200 mm. Particularly rigid base body of GJS-60, **top and bottom faces ground; pairing accuracy 0.02 mm.**

Feature:
Fully enclosed low-maintenance nitrided spindle!

- Increased service reliability.
- Optimised swarf protection.
- Minimised cleaning requirement.

Size 90–125MX – **With 25H6 M10 holes at 200 mm pitch for zero-point clamping system.**
Size 200 – Base body same as size 160.
Size H200 – Heavy Duty for very heavy machining.

Application: Can be used horizontally or laterally, **since the side faces are ground to an accuracy of -0.05 mm.**

Supplied with: 2 stepped jaws (= standard!), 1 crank handle, 4 table clamps.

Optional extras:
Size 90–125LX – ■ Clamping stud No. 360025 - 25 M10.
Size 125M–125LX – ■ Adapter plates for quick jaw change Xtric No. 361293;361294 size 125.
■ Adapter plates No. 361297; 361298 size 125.
Size 125MX; 125LX – ■ Front jaws No. 361140 – 361151.

Note:
■ Dimensions/jaws interface NC 8 identical to the Allmatic TC / LC.
■ NC 8 (No. 360405) supersedes the products LC (No. 360500) and TC (No. 360400).
■ **Sizes 125 MX and 125 LX are supplied with jaws No. 361295 125 and No. 361296 125.**
Size 90; H200 – ■ **No end face holes for extensions included!**

Garant HiPo clamp NC high-pressure vice

- **Pairing accuracy 0.02 mm.**
- Alignment dimensions compatible with other manufacturers.
- Universal design accepts wide variety of jaw systems.
- Slides induction hardened.
- Fully enclosed spindle (minimises cleaning requirement).
- Tapped holes on each side for workpiece backstop.
- Including holes 18M16 for zero point clamping system pitch 200mm.
- **All faces apart from the end face ground:** Can be used horizontally or laterally.
- Angled gear drive can be attached.
- Fully enclosed and nitrided spindle.
- Tapped hole for workpiece backstop.

Supplied with:

Size 125 – Including stepped jaws No. 361400 and 361420, 4 stepless adjustable clamps and hand crank.

Size 125X – Including stepped jaws 361295 125 and 361296 125, 4 stepless adjustable clamps and hand crank.

Optional extras:
- Accepts popular makes of jaws size 125, e.g. No. 361400 – 361660, No. 362390 – 362600, No. 361295, No. 361296.
- For tenon and Tee-nut set see No. 360530.
- For workpiece backstop, hand crank see No. 360555; 360800.
- Clamping stud No. 360025.
- Angle drive No. 360457.

Size 125; 125X –
- Adapter plate for quick jaw change Xtric No. 361293; 361294 size 125.
- Adapter plates No. 361297; 361298 size 125.

Note:
- Suitable base body extension is available on request.
- Size 125X is supplied with jaws 361295 125 and 361296 125. Can be used with Xpent front jaws.

NC high pressure vice – version LC

- Compact size; optimum ratio between jaw span and overall length. **Clamping force can be checked visually by the 4 ring marks.** Maximum clamping pressure reproducible using integral fixed stop.
- Particularly rigid base body made of spheroidal graphite iron, top and bottom faces; pairing accuracy 0.02 mm.
- **Supplied with 25H6 M10 holes for zero point clamping systems, pitch 200 mm.**

Feature:

- **Click quick-change system** for parallel inserts / jaws. Short set-up times and high flexibility.
- Fully enclosed and nitrided spindle (increased operational reliability, optimised swarf protection, minimised cleaning requirement).

Application: Universal clamping system for machining centres.

Supplied with: 2 stepped jaws, 1 crank handle, 4 steplessly adjustable clamps, and 1 hexagon L-wrench.

Optional extras:

- For tenon and Tee nut set see No. 360530.
- See No. 360555; 352650 and 360800 for spare component backstop / spare crank handle.
- See No. 360850 for hand crank extension.
- See also No. 361380 – 361770 and 362390 – 362600 for other jaws.
- For spare stepped jaws see No. 361400; 361420 and 361295; 361296.
- Clamping stud No. 360025.
- Adapter plates for jaw quick-change system Xtrix No. 361293 and 361294 size 125.
- Adapter plates No. 361297 and 361298 size 125.

Note:

- Click system parallel inserts for drilling close to the edge and clamping flat components see No. 361950; 361960; 361970.
- For stepped jaws see No. 361400; 361420; 361295; 361296.

HOLEX NC high pressure vice

Small size – optimum ratio of clamping range to overall length.
Stepless adjustment – 100% clamping force at 360°.
Particularly rigid body made of GJS-60, **ground on top and bottom faces.**
Pairing accuracy 0.02 mm.

Feature:
- **Fully enclosed low-maintenance nitrided spindle**.
- Increased service reliability.
- Optimised swarf protection.
- Minimised cleaning requirement.

Application: For horizontal use. Versatile clamping unit for machining centres.

Supplied with: Including 2 pcs. stepped jaws and 1 pc. hand crank.

Optional extras: Stepless adjustable clamps No. 360579.
Alignment and fixing set No. 360530.
Popular makes of jaws such as No. 361400– 361660, No. 361295– 361298.
Workpiece backstop and crank No. 360555 and 360800.
Jaws quick-change system No. 361293 125 and 361294 125.

Note: Alignment dimensions not compatible with those of other manufacturers.

NC high-pressure vice – Duo 2-component vice

Particularly rigid body made of spheroidal graphite iron, ground on top and bottom faces. **Pairing accuracy 0.02 mm.**

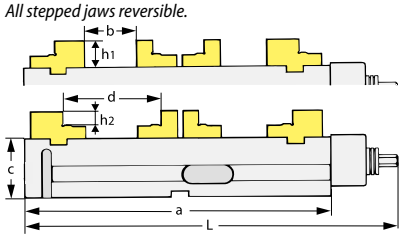
Function: Insert first piece at **clamping position I** and turn the crank until movable jaw touches the component, then insert second part at **clamping position II** and continue to turn the crank all the way to the stop.

Application:
- **For horizontal use**.
- Clamping of **2 identical parts,** dimensional differences (± 3 mm).

Supplied with: Includes 4 stepped jaws, 1 crank handle, 4 steplessly adjustable clamps and Quick-Start Guide.

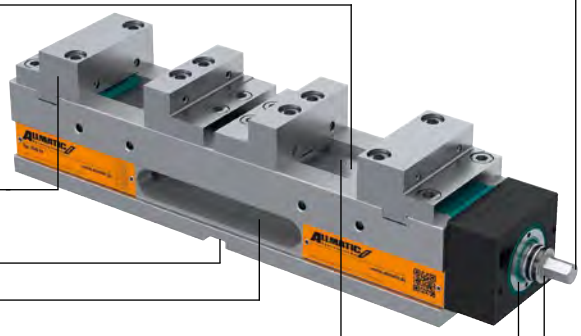
Note:
- **Overall length L remains unchanged** (reduced risk of collisions).
- **Accessories see No. 360530; 361400; 361440; 361600 – 361970.**
- **Always clamp 2 workpieces!**
- Size 90 – **With 25H6 M10 holes at 200 mm pitch for zero-point clamping systems.**

All stepped jaws reversible.



Clamping using crank.
High clamping forces achieved with low physical effort. Required clamping force can be pre-selected.

Clamping positions I and II, induction hardened.



Click quick-change system
(see No. 36 1950 / 1960 / 1970).

Precision tenon slot (milled).

Outlet opening
for chips and coolant.

Spindle chamber
with profile wiper and spindle seal.

Well-proven maintenance-free high-pressure spindle
with constant pressure level due to low-wear mechanical power intensifier. No reduction in clamping force.

Threads
for angled gear drive (angle drive on request)

NC high-pressure vice – Duo Plus 2-component vice

Rigid base body made of GGG60, slides induction hardened and ground.

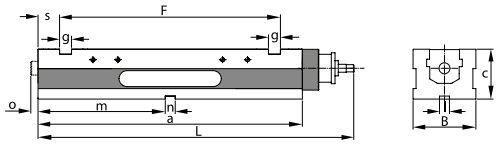
Function: Place and secure the first and second component to the mobile jaws. If the crank is turned past the engagement point, the clutch disengages. The pressure spindle activates the mechanical power intensifier.

Application:
- For **horizontal** use.
- **Capable of clamping 2 different workpieces** or clamping 2 identical parts. Dimensional differences ± 2.5 mm (workpiece 1 to workpiece 2).
- **Conventional and gripper clamping using carrier jaws or a combination of the two.**

Supplied with: 4 pcs. stepless adjustable clamps, Quick Start Guide.

Optional extras: Clamping jaws No. 361400 – 361440, 361600, 361660.
Parallel inserts No. 361950, 361960, 361970.
Gripp set No. 361345.
Torque wrench No. 656050 size 60.

Note:
- **Overall length L remains unchanged** (reduced risk of collisions).
- **Accessories see No. 360530; 361400; 361440; 361600 – 361970.**
- **Always clamp 2 workpieces!**



Precise location slots
Precise longitudinal and transverse location slots in the base for optimum alignment on the machine table.

Outlet opening
for chips and coolant.

Tapped hole in the side
for a workpiece back-stop.

Clamping capacity can be adjusted
by changing the spindle position.

Fully enclosed maintenance-free high-pressure spindle,
minimal cleaning requirement.

NC high-pressure vice Centro Gripp – 5-face blank component machining

Guide track induction hardened, top and bottom faces ground.
With 25H6 M10 holes for zero point clamping system, pitch 200 mm.
Feature: Enclosed spindle, high swarf protection, minimal cleaning requirement.

Function:
- Spindle with integral power intensifier.
- Clamping with adjustable torque wrench (18 – max. 70 Nm).
- Clamping centre adjustable.
- Repetition accuracy ± 1/100 mm for angular workpieces.

Application: In conjunction with various jaws it can be used for conventional clamping, clamping of smooth-faced workpieces, and grip clamping.

Supplied with: Hexagon socket 20AF-1/2 inch, 6 screws, 2 ring spanners 20AF.

Optional extras:
- Gripper inserts No. 361238 – 361250 and No. 361160.
- Torque wrench No. 656050 size 120.
- Extension base No. 361230 size 125.

NC high-pressure vice – T-Rex, 5-face blank component machining

Top and bottom faces ground. **With 25H6 M10 holes at 200 mm pitch for zero-point clamping systems.**

Suitable for: Fixed carrier jaws No. 361206; 361208.
Mobile carrier jaws No. 361207; 361209.

Function: **Clamping using adjustable torque wrench (maximum 30 Nm)**, requiring only minimal lost clearance around the component(in connection with jaws / gripper inserts). **Using special high pressure spindle and mechanical power intensifier.**

Feature: Sturdy, compact base body (GGG 60) with large capacity. Fully enclosed and nitrided spindle (increased operational reliability, optimised swarf protection, minimised cleaning requirement).

Application: Quick and secure clamping of **flame-cut and saw-cut blanks** by penetration of **hardened and replaceable Gripp inserts** into the workpiece. Suitable for all materials with a strength of up to approximately 1000N/mm² (exception: hardened materials).

Supplied with: 4 securing bolts, hexagon screwdriver bit 3/8 inch. Additional 3 hexagon L-wrenches (5 / 8 / 10 AF).

Optional extras:
- For extension base see No. 361230 size 125.
- For gripper inserts see No. 361238 - 361250; 361260
- For stepped jaws see No. 361210; 361215.

ALLMATIC Screw-in gripp inserts / gripp set

Universal gripp set

Suitable for: Allmatic jaws 361206 – 361354.

Application: The universal gripp set offers a wide range of possibilities for the clamping of blanks.
It consists of a base unit with position adaptation, mounting unit and gripp insert, and is bolted to the carrier jaw with an M10 bolt.
The customer can modify the mounting unit to set the points of the gripp unit in nearly any position relative to the workpiece, allowing the gripp height and also the mounting height of the workpiece to be varied.

for type	125
34A 36 1345 Universal gripp set (case with 4 units)	eShop

ALLMATIC T-Rex extension bases for increasing the NC vice height

Suitable for:
Size 125 – T-Rex No. 361202 / Centro Gripp No. 361180.
Size 125XL – No. 360405; 360465; 360510; 361290 and No. 361302 in size 125M.

Supplied with:
Size 125 – Extension base with 1 locating pin, 2 t-slot nuts and 4 bolts.
Size 125XL – Extension base with 1 locating pin, 2 tenons, 8 duo table clamps, and 4 bolts.

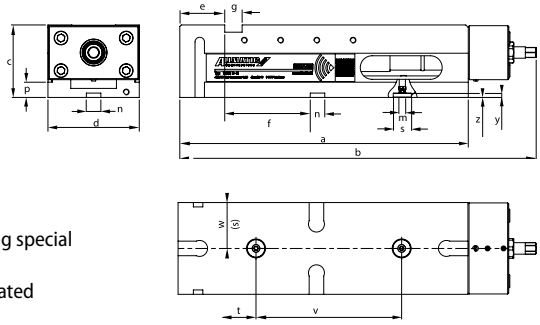
Modular NC high-pressure vice TitanSense

- Clamps for modular clamping system with **intelligent clamping force monitoring.**
- Monitoring of the clamping force during clamping and during machining by means of **an integrated electronic measuring system.** Display directly on a robust and splash-proof display and via wireless transmission to the end device (via Bluetooth® (BLE)).
- Enclosed spindle with power intensifier (IP65).
- Process-safe clamping with high repeatability.
- Can be used horizontally and vertically, making it ideal for 3 and 4-axis machines.
- Clamping of raw and pre-machined parts (parallel, round and shapeless) also with Gripp and pull-down clamping for materials up to approx. 1400 N/mm² strength.
- Slides induction hardened. Side, top and bottom faces ground.



361303_125M

Function: **Clamping exclusively with adjustable torque wrench (maximum 30 Nm).** Using special high pressure spindle and mechanical power intensifier.

Feature: The clamping force can be measured with all compatible jaws, thanks to the integrated measuring unit in the spindle.
Transmission range up to 20 m. Easy and fast replacement of standard batteries (LS14250; 1/2AA) with long battery life. Operating temperature between 10°C and 40°C. QR code for quick access to technical information, accessories, spare parts and service on the rating plate.
Increased force travel for secure clamping of blanks in combination with a pull-down function.
Jaws secured with M12 socket head screws.
8 mm lost clearance when pulled down, 3 mm for Gripp.
Clamping can be achieved close to the neutral line. Clamping jaws from the Allmatic/GARANT NC clamping range are compatible (see special accessories).
Outlet for chips and coolant. Precise location slots.
Tapped holes for component backstop and for extension.
Maximum clamping force 40 kN.

Size 125M – With 25H6 M10 holes at 200 mm pitch for zero-point clamping system.

Size 125M; 160 – Can be installed vertically.

361303_125M

Advantage: Precise and powerful multi-function high-pressure vice.
- Reliable clamping of blank parts, thanks to the extra long stroke of the high-pressure spindle.
- Precision machined finished parts, base body machined all round.

Application: **For conventional clamping, grip clamping and pull-down clamping.** Clamping of **flame-cut and saw-cut blanks** by **hardened replaceable Gripp elements** piercing into the workpiece. Suitable for all materials up to tensile strength of 1000 N/mm. Can be used horizontally or laterally.

Supplied with: Bi-hex socket 14 AF, 4 pcs. stepless adjustable clamps.
