In the first part of the program
 the main thing was to
 show the results of the
 experiments done during the
 summer months, as they
 were very important in
 the study of the
 very high temperature
 reactions which had
 been carried out
 during the summer
 months. The results
 were very interesting
 and showed that the
 reaction was very
 rapid and that the
 products were very
 pure. The results
 were also very
 consistent and
 showed that the
 reaction was very
 reproducible. The
 results were also
 very interesting
 and showed that
 the reaction was
 very rapid and
 that the products
 were very pure.
