

# ACHIEVE IDEAL INPUT PLACEMENT

With TRIMAX™, seed is provided the best environment for a safe start and well timed access to nutrients producing optimal results in all conditions.

1

**NITROGEN**  
is positioned away from  
the seed, eliminating  
seed toxicity.

2

**SEED**  
is placed safely  
on its own.

3

**STARTER FERTILIZER**  
is positioned nearby for  
quick emergence.

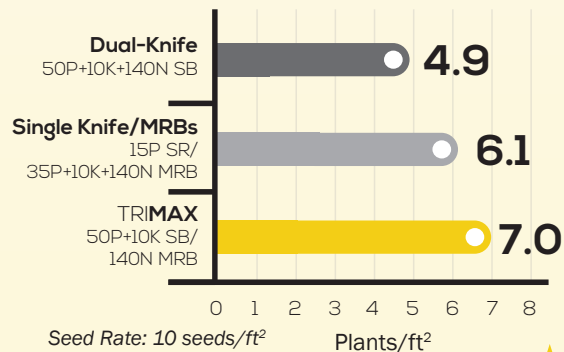

➤ In a 5-year study conducted by the Bourgault Agronomy Team, one message was very clear; canola mortality is lowest when there is no fertilizer in the seed row.

Under the same growing conditions, the TRIMAX™ Triple-Shoot System significantly reduces seed mortality allowing Producers to confidently lower seeding rates, yet still achieve the same target plant stand.

## ➤ AVAILABLE TRIMAX™ Configurations

A 3330SE or 3335QDA PHD™ equipped with either PLS™ or PLX™ Single Shank Openers (with a BTT side-biased boot), or PLDS™ Dual Shank Openers; plus, either MRS™ or MRB® Fertilizer Applicators; plus, a Trailing 9000 I Series Air Cart.

## 5-YEAR TRIAL AVERAGE

Canola Results: 2016/2017/2019/2020/2021
