

Mobile app on Flutter

- Cross-Platform Compatibility: Seamless experience on both iOS and Android.
- Modular Architecture: Scalable and maintainable structure for efficient development.
- Full Customization: Tailored solutions to meet your unique business needs.
- Unlimited Functionality Expansion: Easily add new features without restrictions.
- Official Google Support: Benefit from Flutter's strong backing and continuous updates.
- Enhanced Security: Robust protection against hacker attacks and cyber threats.
- Payment platform or financial service for businesses

About the App

Home Page

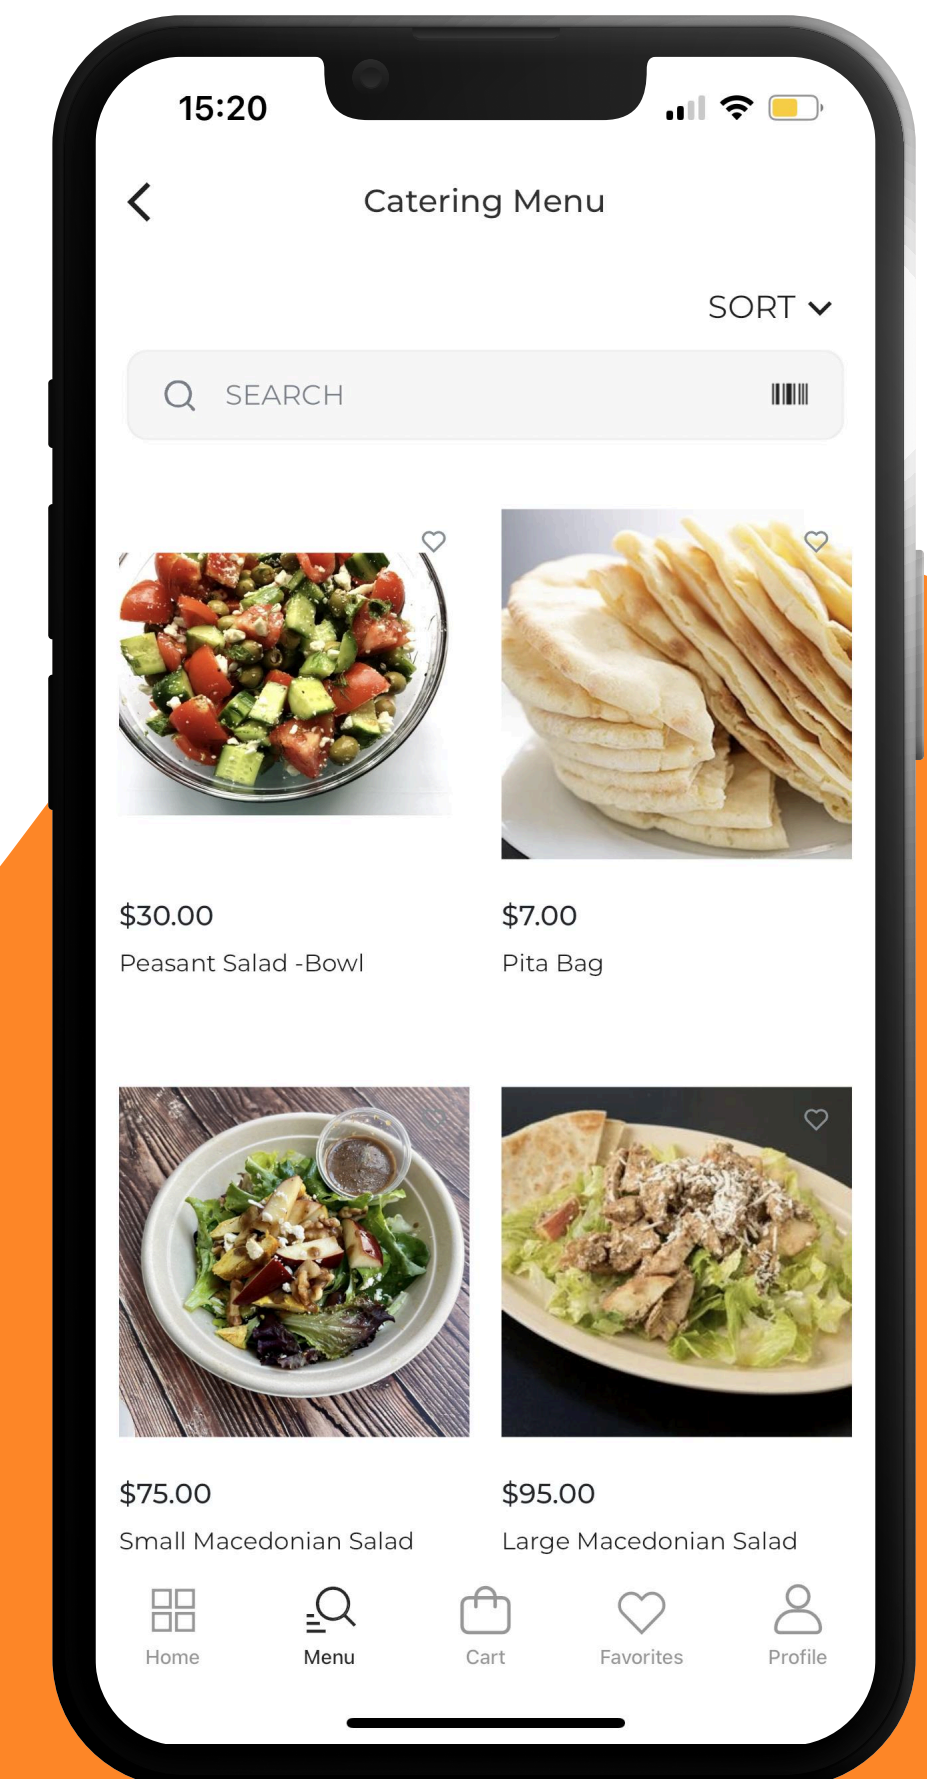

- Custom Home Page: banners, "to buy" buttons, product headlines, button slider, mini adv slider, stories, and news blocks within the showcase
- Stories with a daily selection of dishes
- Smart search with ElasticSearch
- Share your restaurants' operating hours

About the App

Catalog

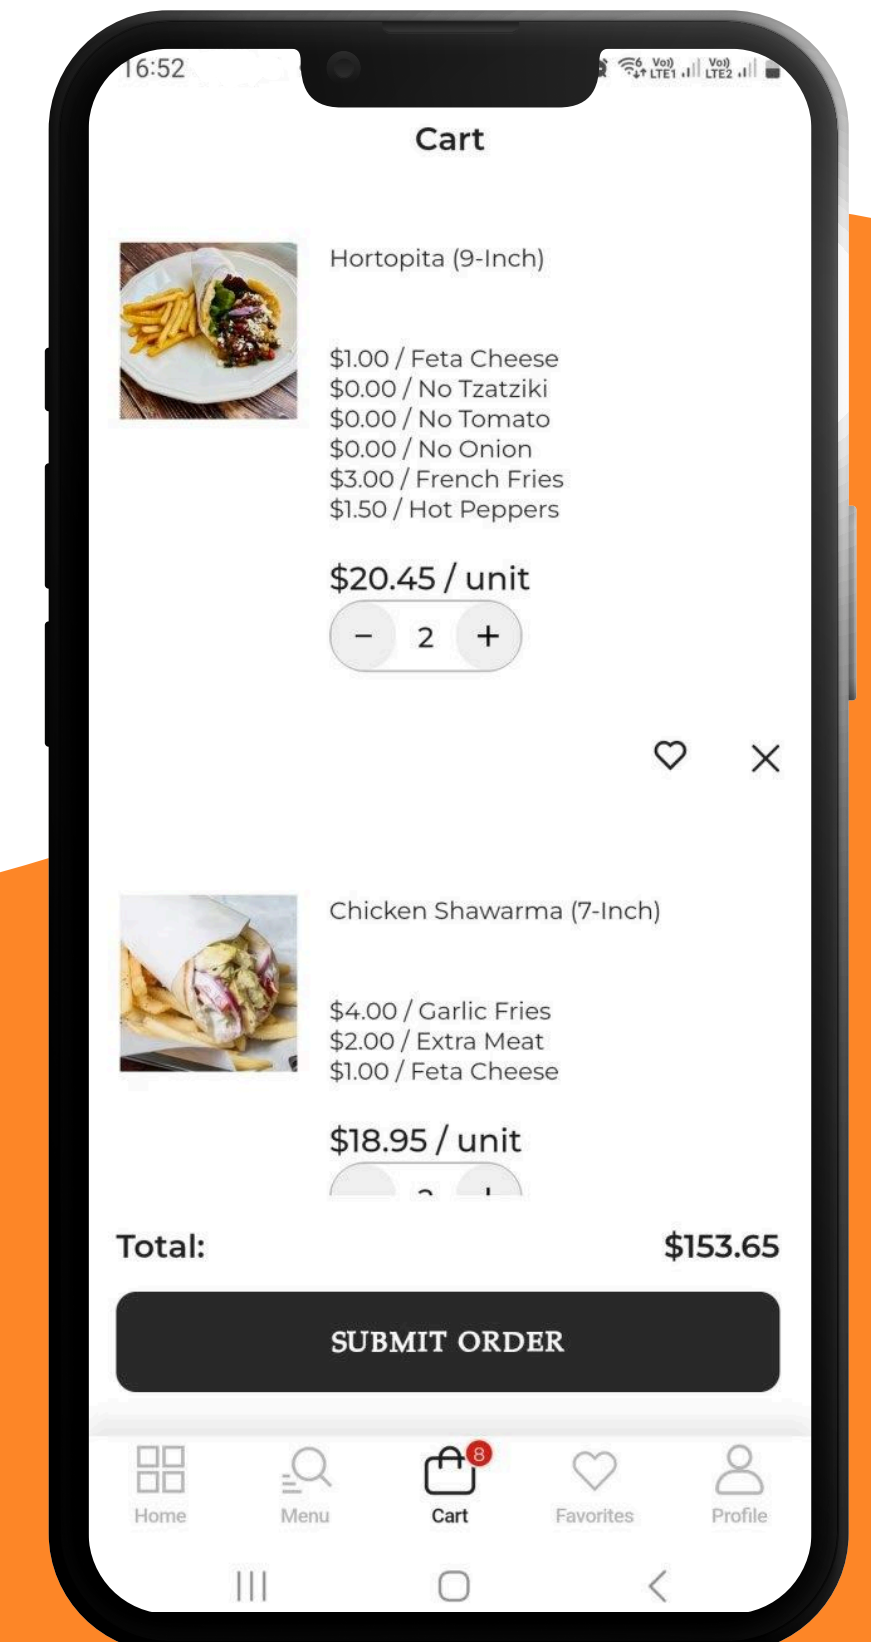

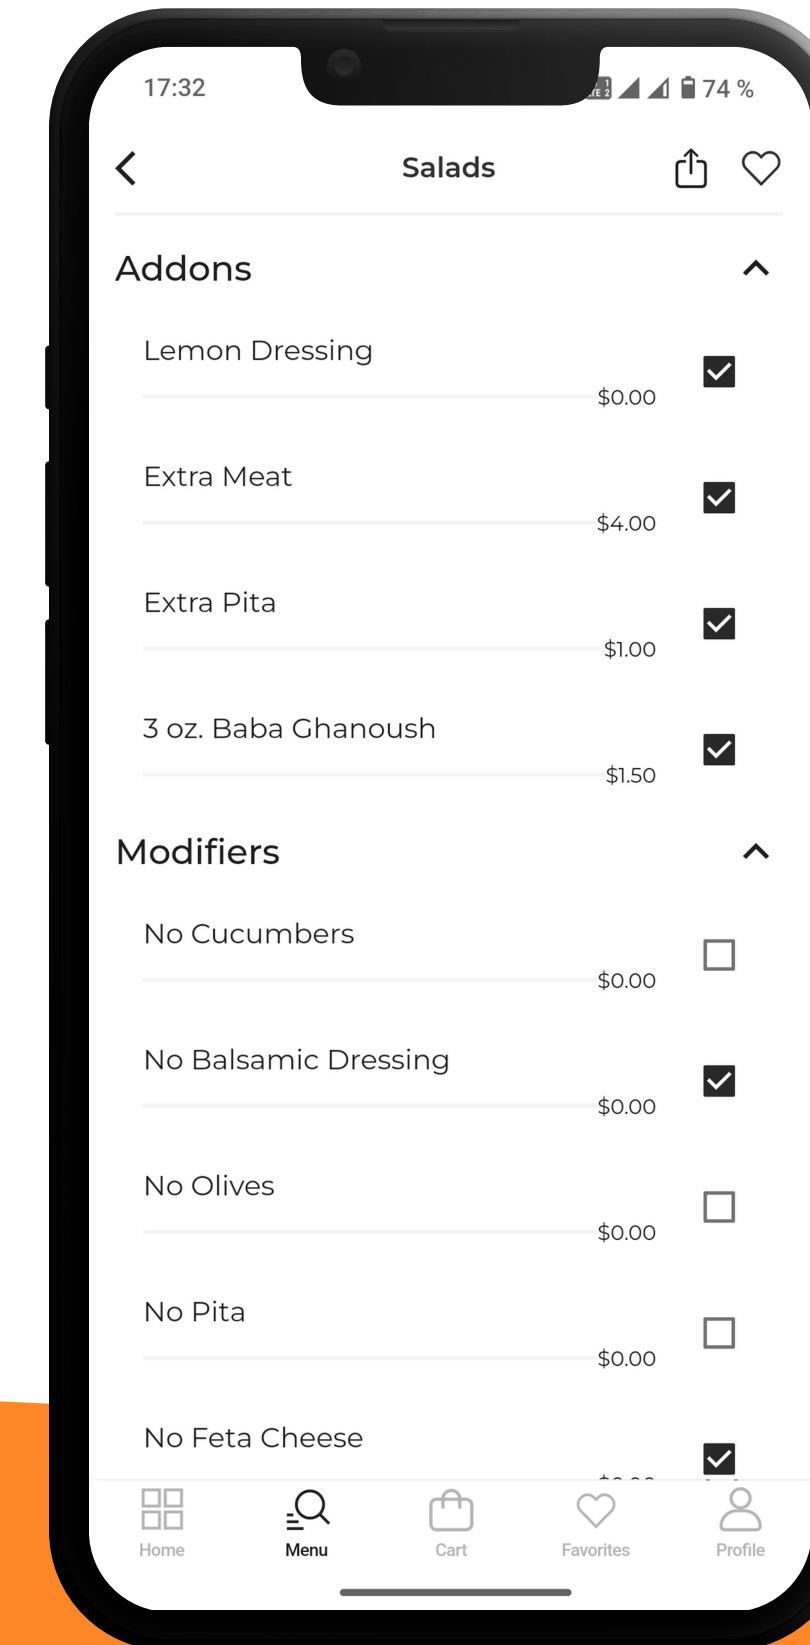

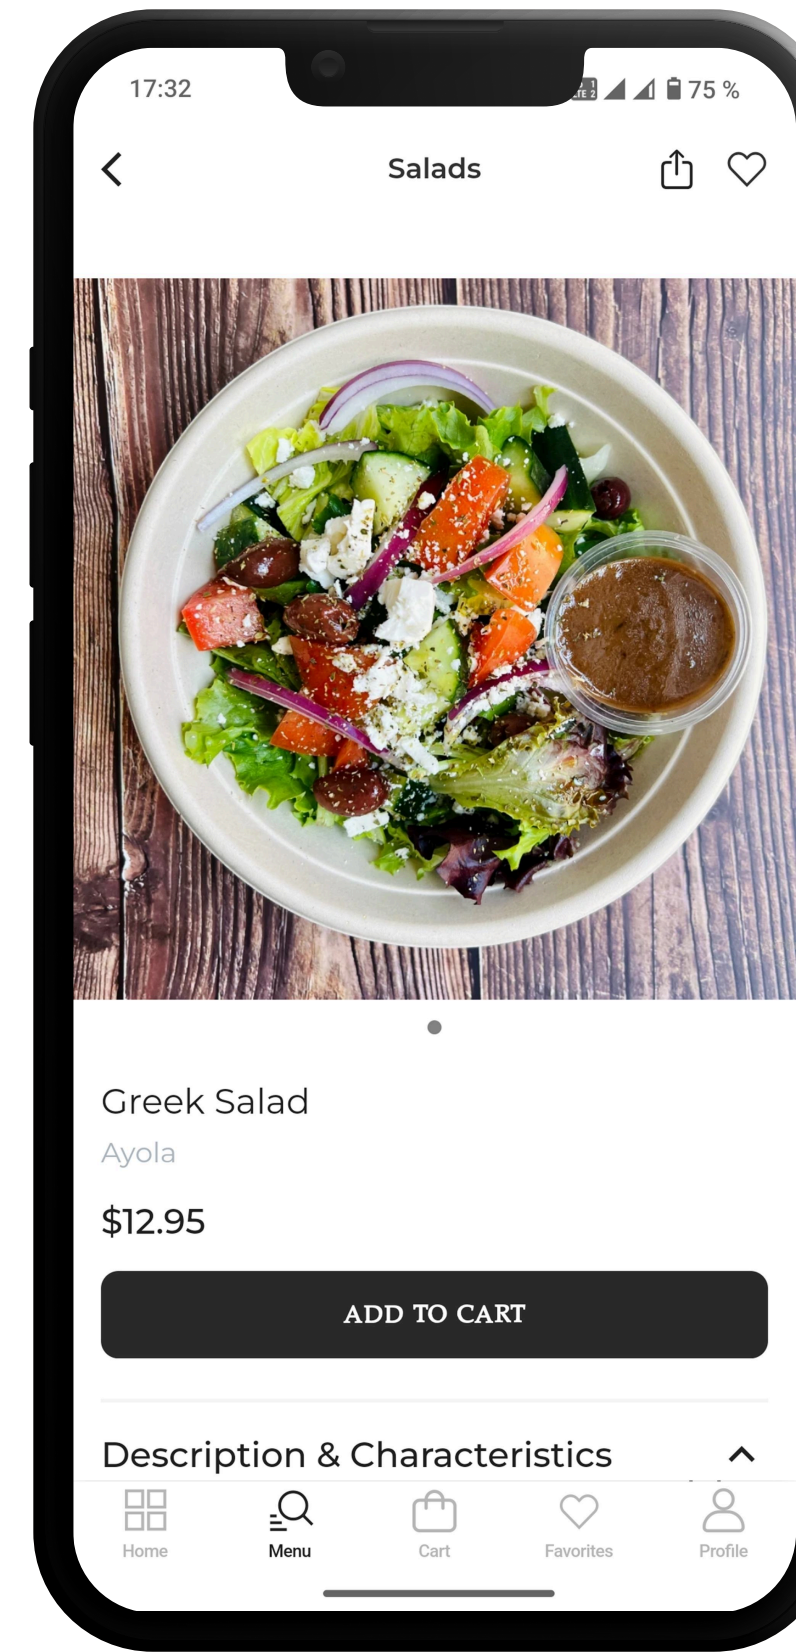

- Find you favorite dishes quickly with ElasticSearch
- Sort dishes by price, popularity
- Share your favorite meals and save them to your favorites list

About the App

Addons & Modifiers

- Add-ons and modifiers allow you to customize your meal with extra toppings or sides
- You can customize your order by specifying modifiers like "no pita" or "no cucumbers" to tailor the meal exactly to your taste
- You can enhance your burger by adding cheese, bacon, or an extra piece of crispy chicken

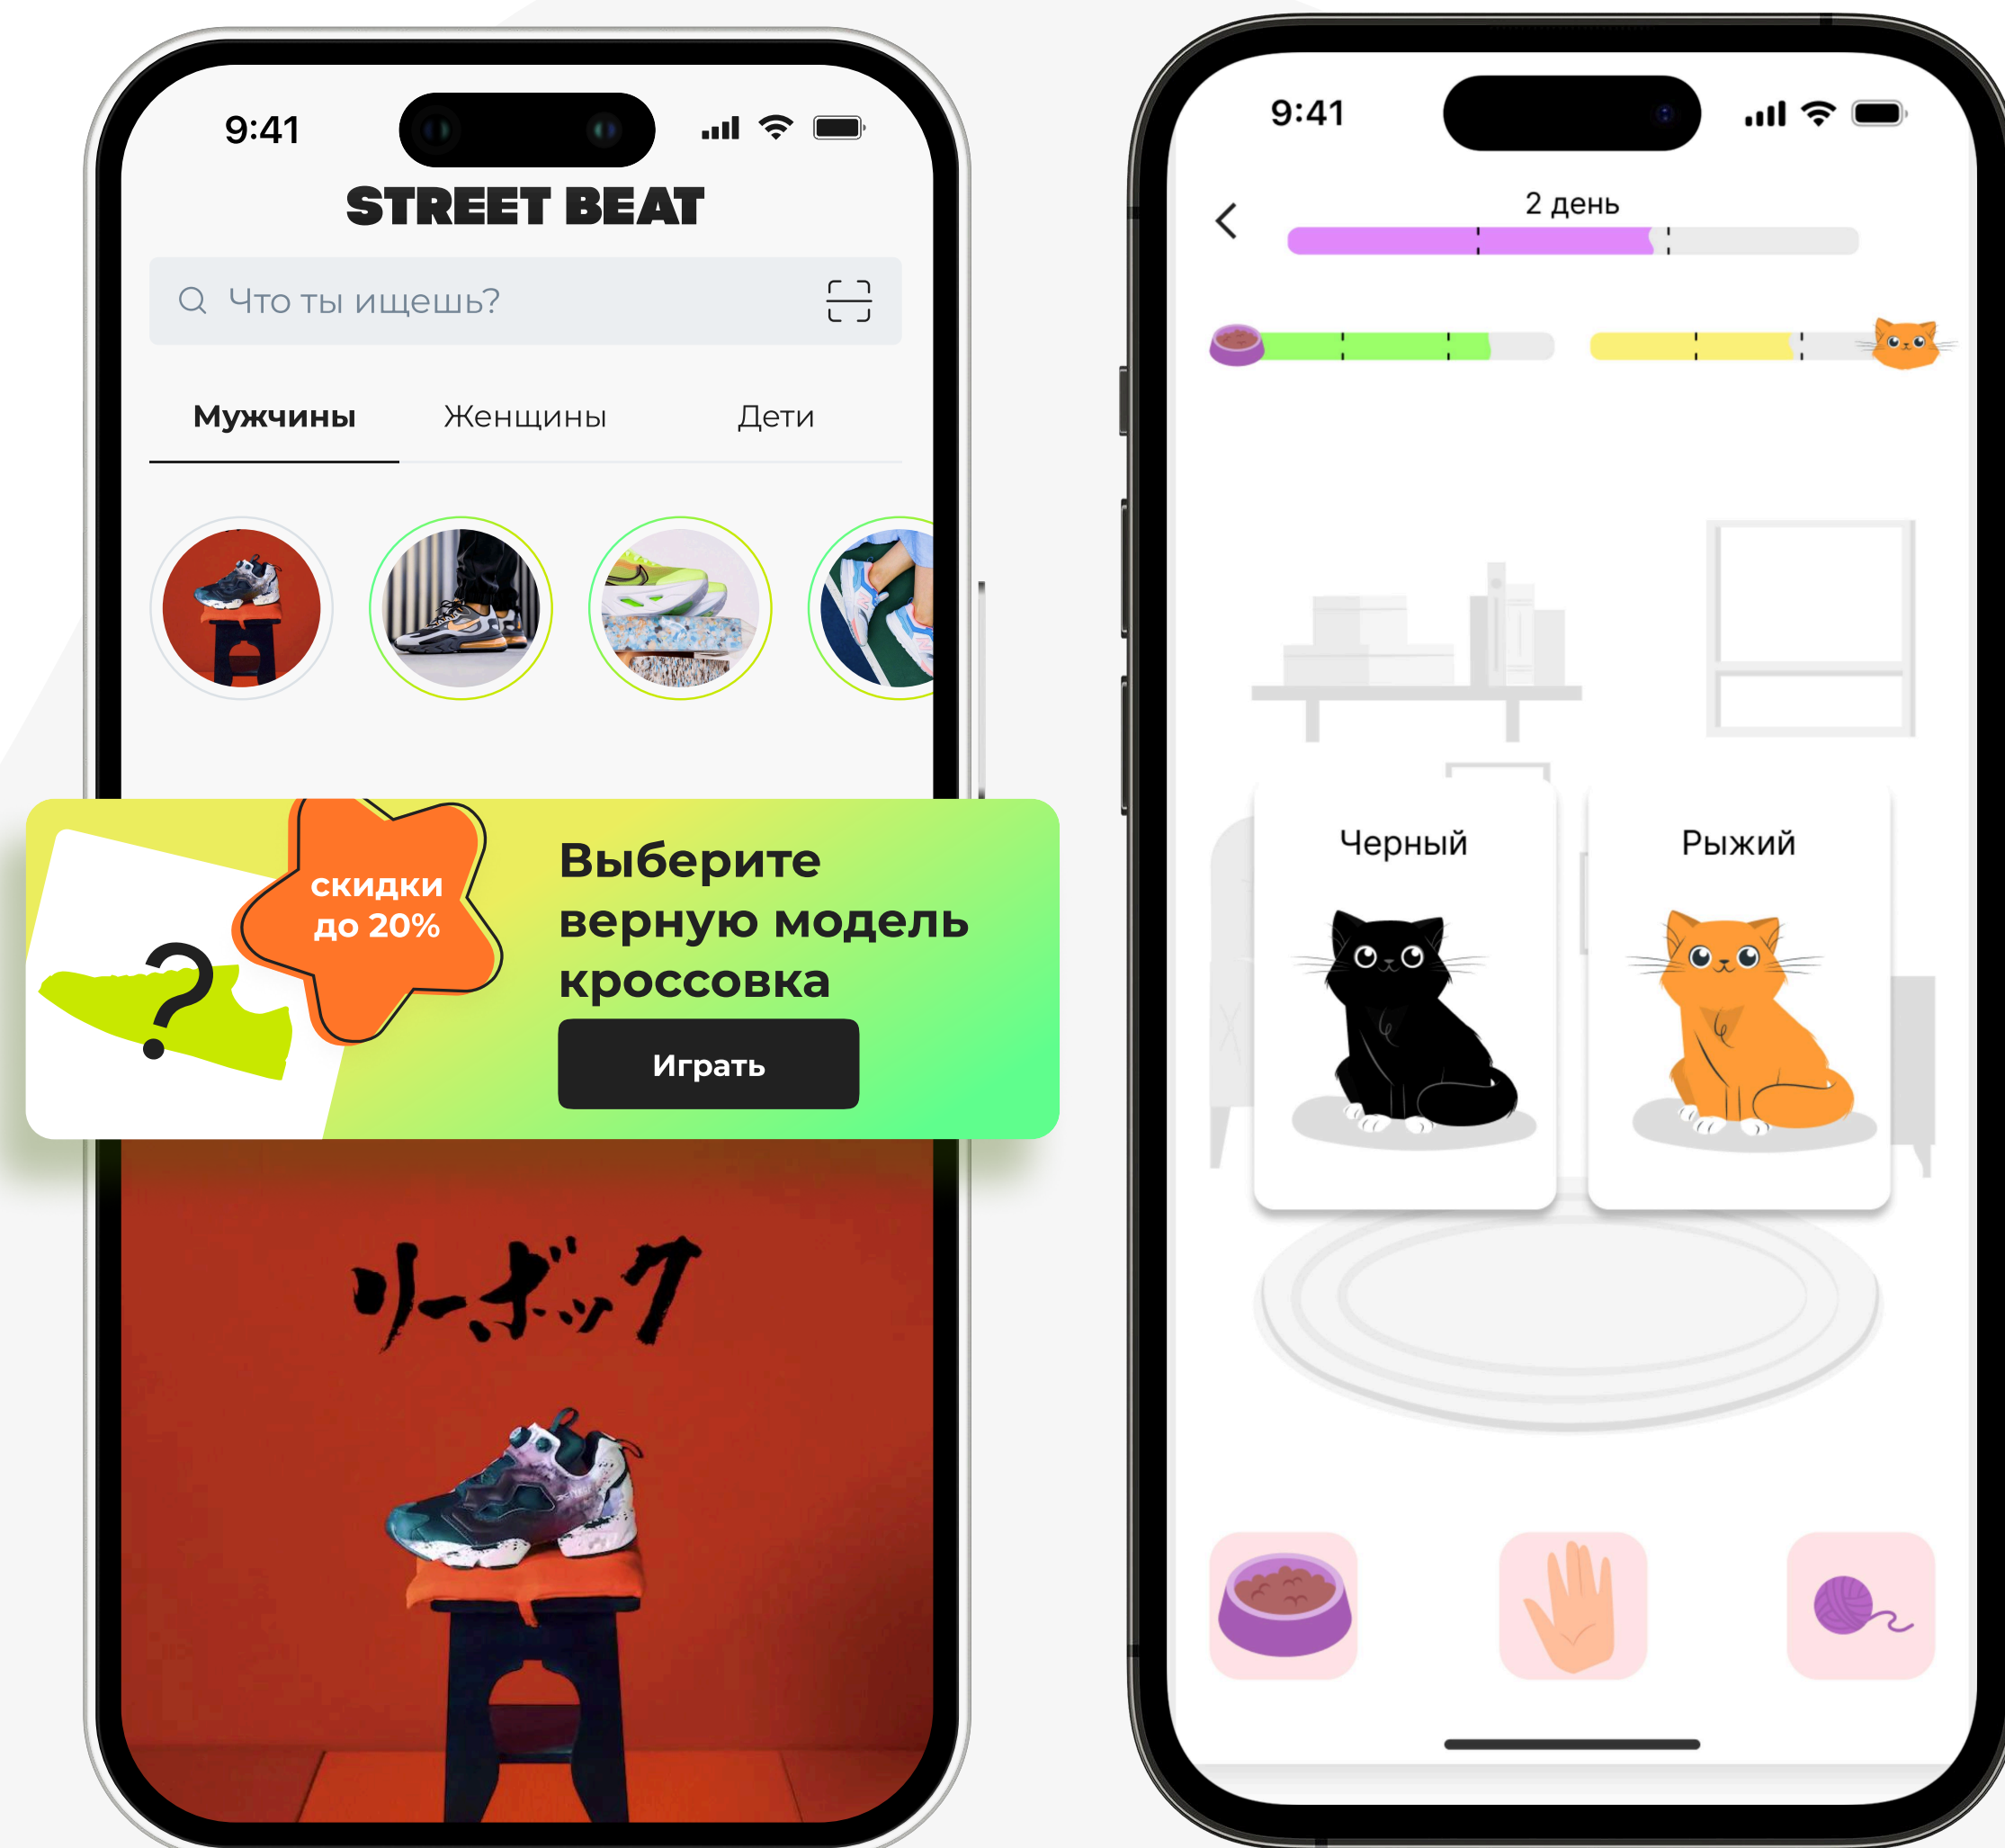

№1

Gamification in the Mobile App

Using mobile apps as an example **STREET BEAT** and  ADRIA

A tool for boosting sales, brand recognition, and customer acquisition

Launching the game from the app's main screen

№2

News and Articles

Using mobile apps as an example

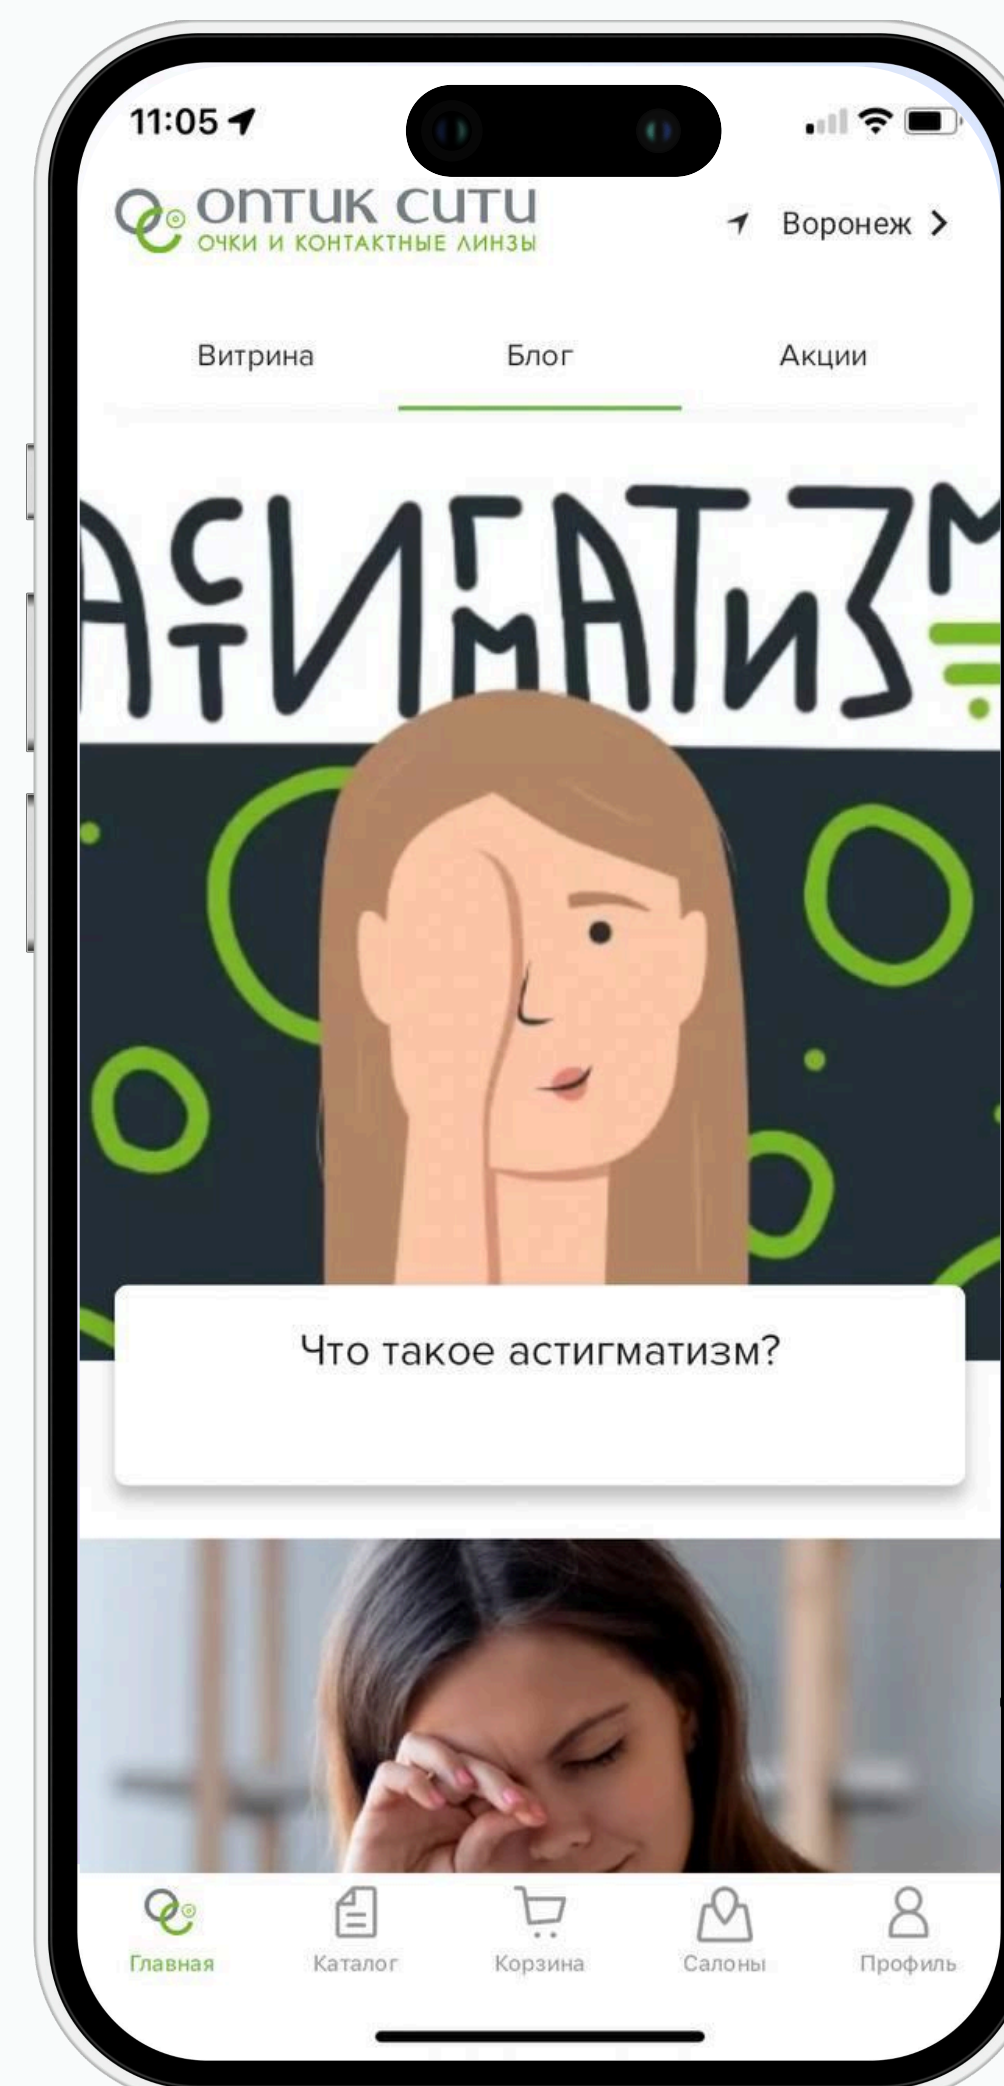

ONTUK CUTU
ОЧКИ И КОНТАКТНЫЕ ЛИНЗЫ

A communication tool
to engage your audience and address
multiple objectives at once:

Optimize traffic and increase user session
duration

Build brand trust by publishing content
valuable to potential customers. This will
eventually
convert visitors and readers
into paying clients

№3

User-friendly service catalog

Using a mobile app as an example

ÍDOL

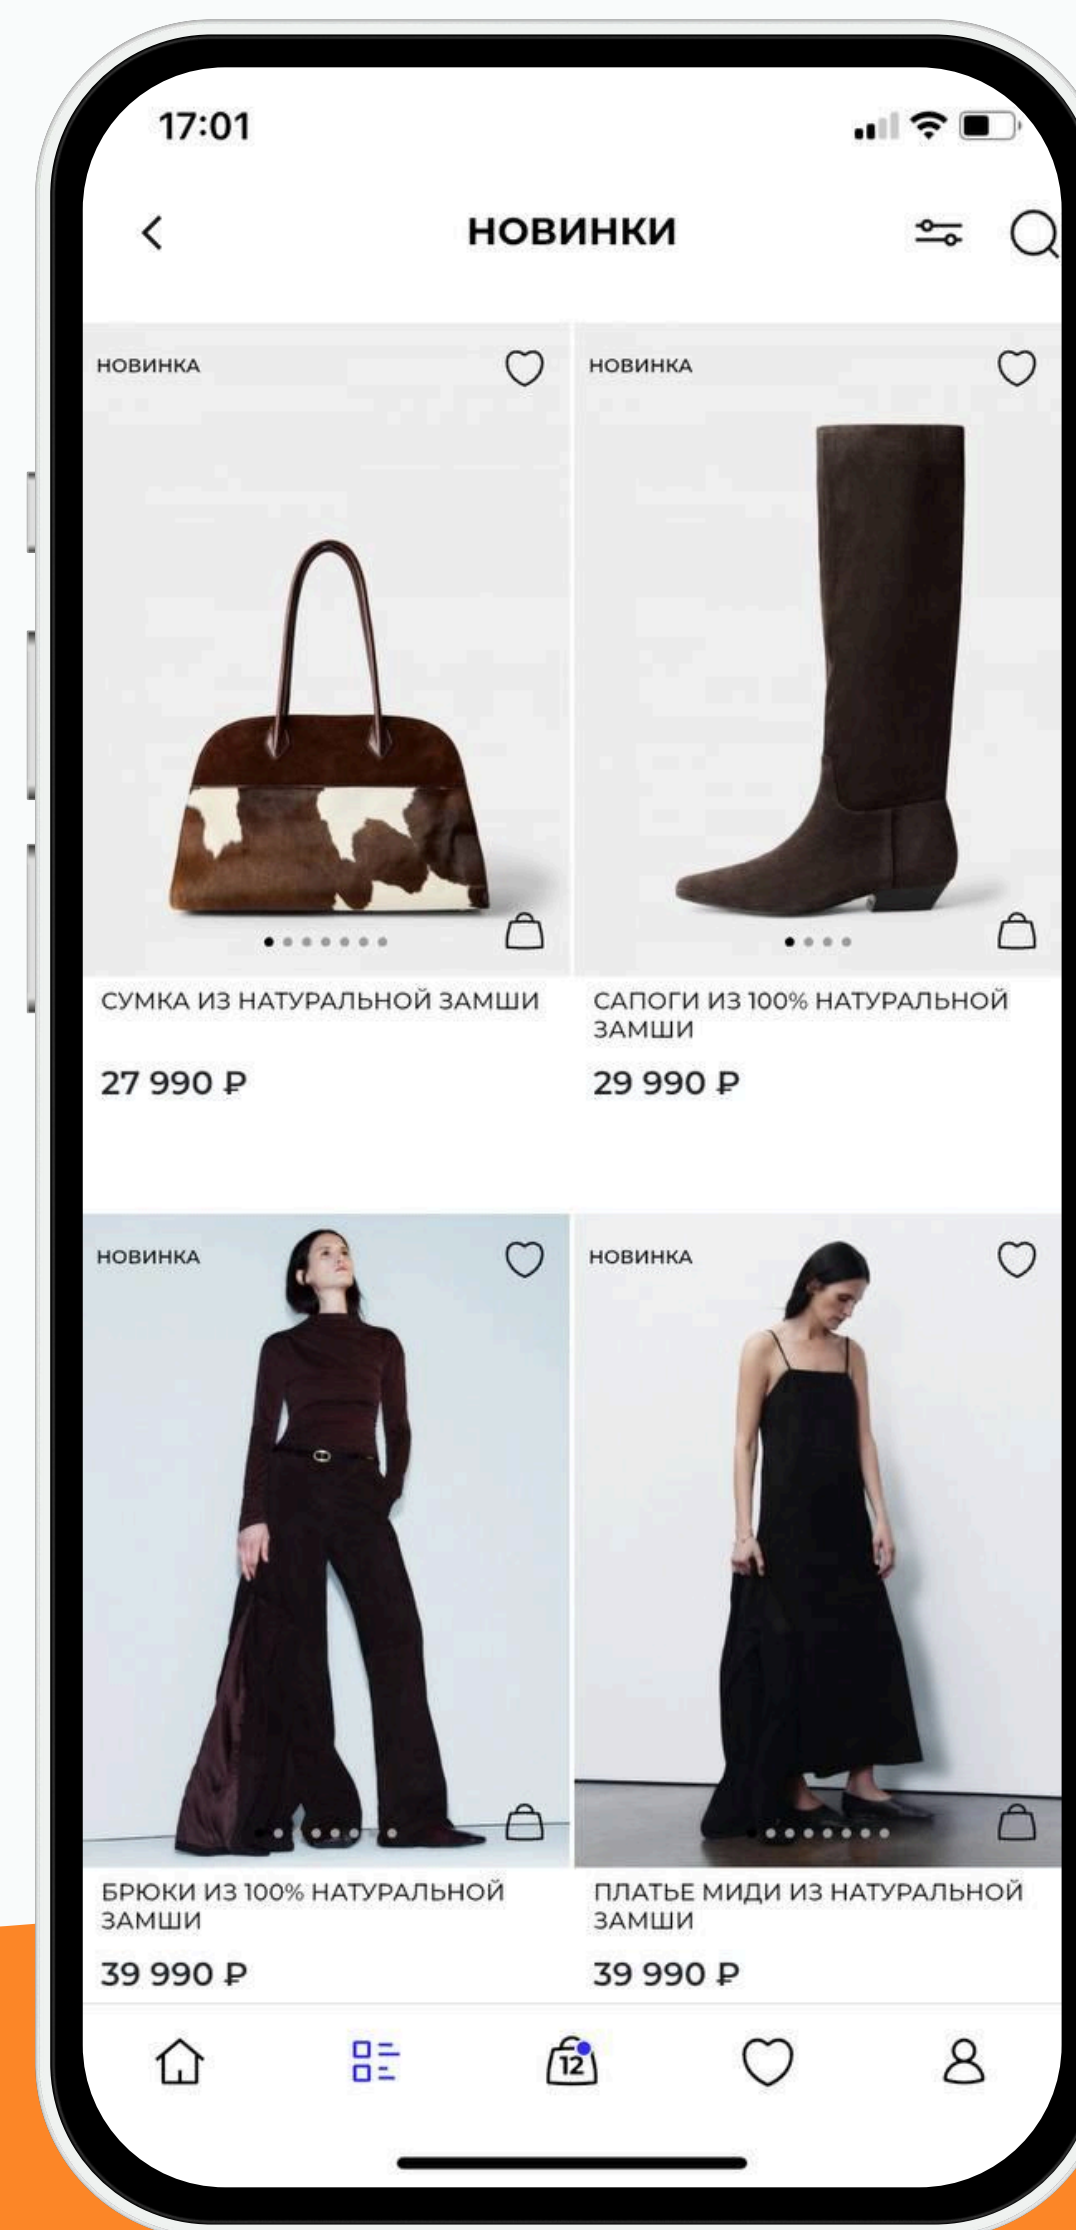

A catalog for clothing, footwear, and accessories with in-list product selection and full photo viewing without opening product cards

≈120 000
monthly sessions

30% total revenue
go to the mobile app

1.5 times longer
users spend in the app compared to the website

№4

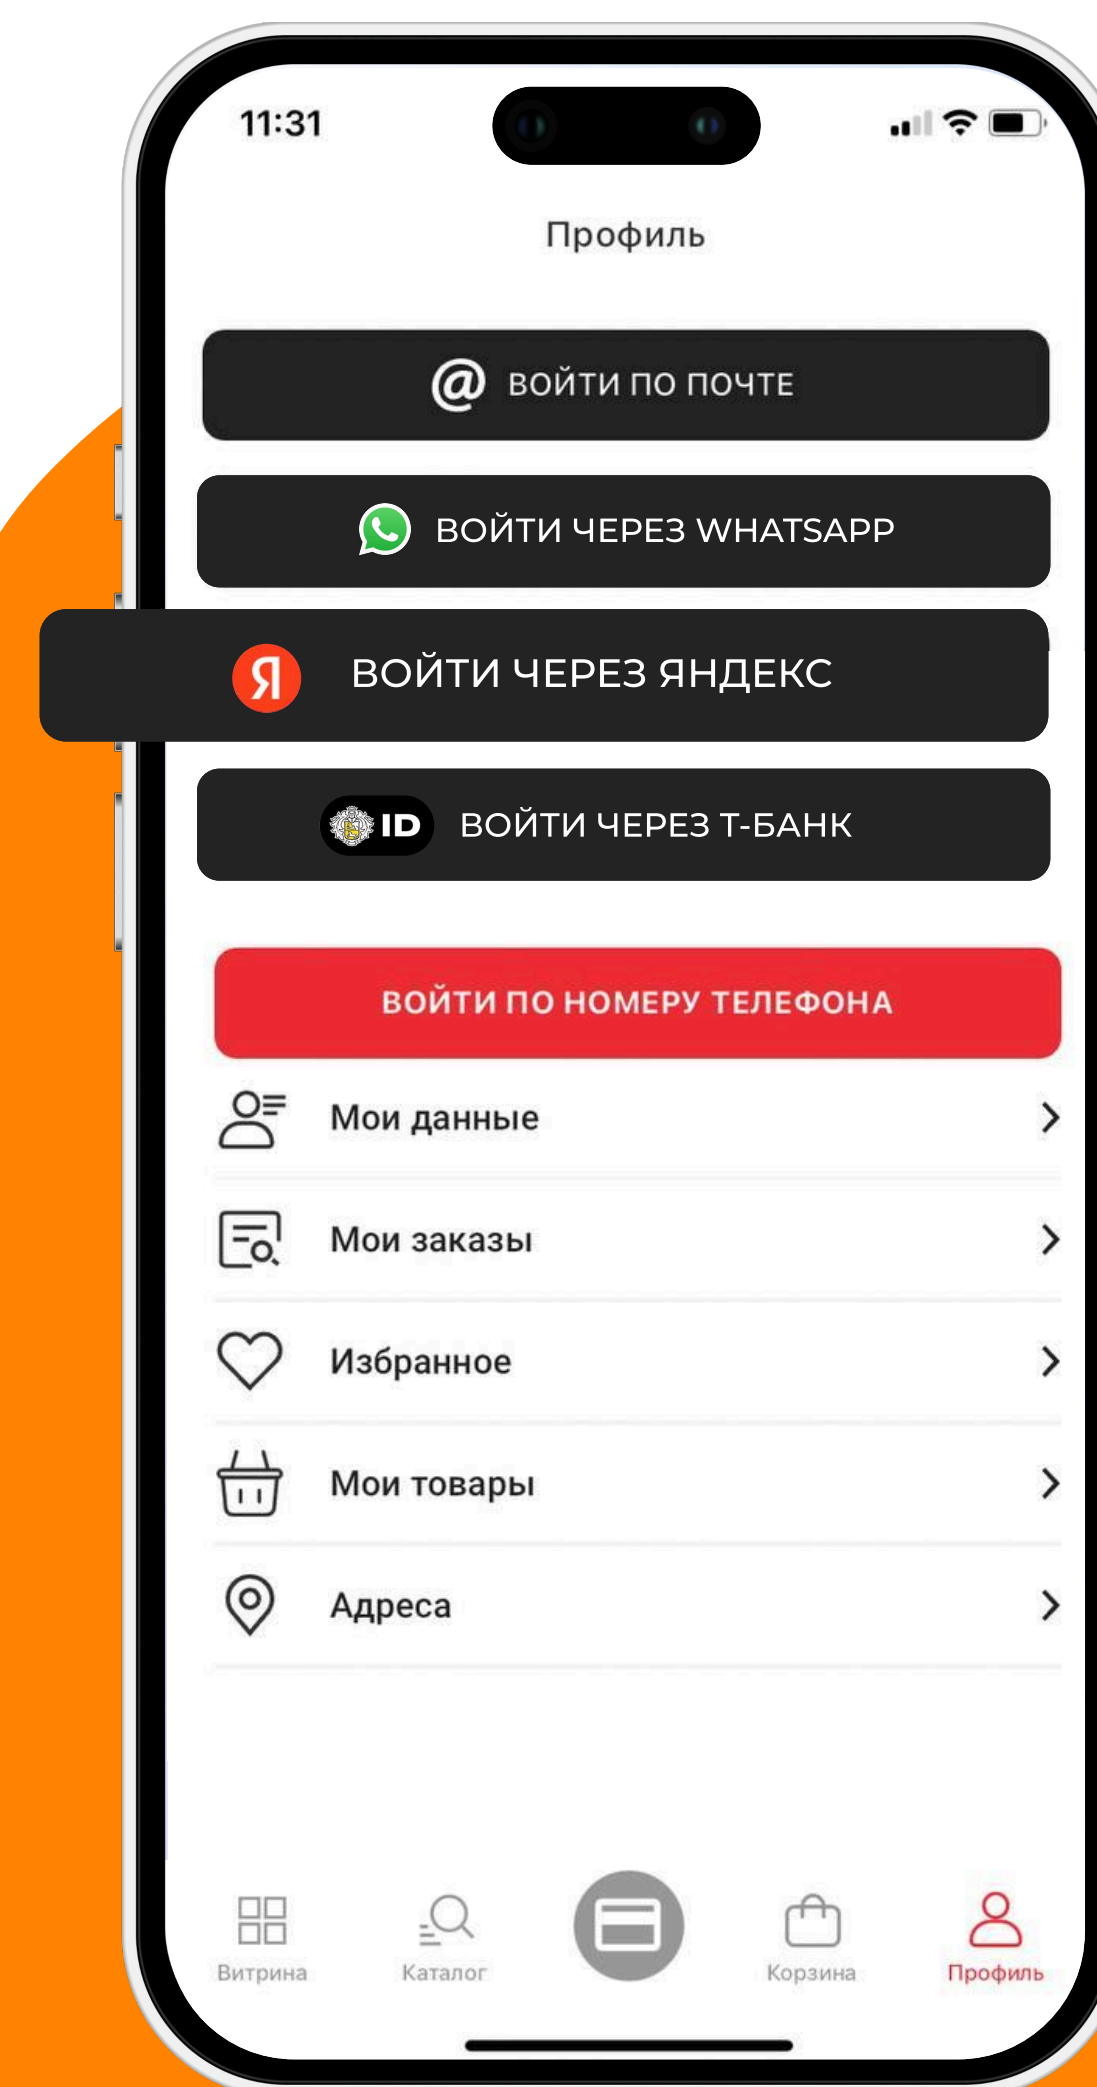

Authorization service integrations

in the app

Using a mobile app as an example

Multiple sign-in options simplify user journey and facilitate seamless app interaction. This ensures constant connectivity and hassle-free purchases

№5

Search scanner

Using a mobile app as an example **STREET BEAT**

The convenient barcode and QR code scanning feature lets you find any product from the store's range and order it via the mobile app

over 1 000 000
Street Beat mobile
app subscribers

№6

Using a mobile app as an example **ЦВЕТОВИК**

ДОСТАВЛЯЕМ ЭМОЦИИ В НУЖНЫЙ МОМЕНТ

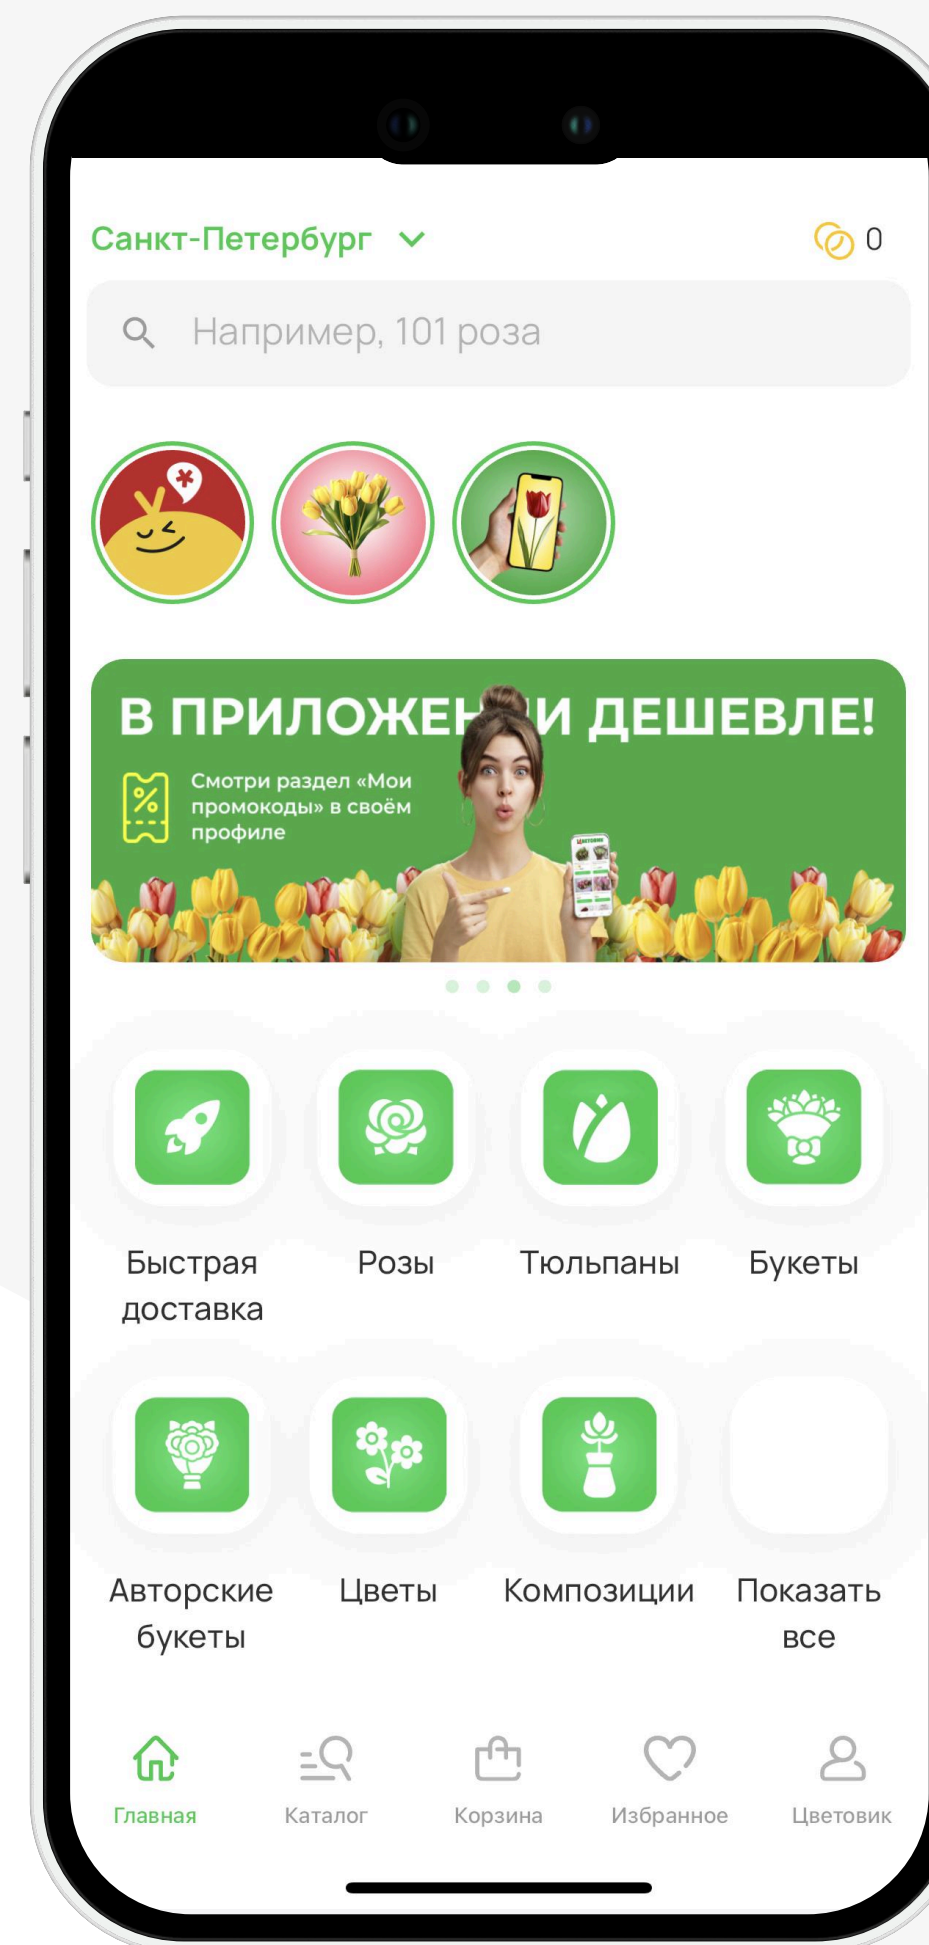

Boosting purchase success rates with multiple payment and delivery options. Customers can choose their preferred trusted service

After partnering with Fittin among mobile apps became

TOP 3
in its niche

Managed to increase the app rating from 2.4 to

4.5

From App Order to Kitchen in One Click

Seamless Integration
with POS Terminals

How It Works:

- Customer places an order through our mobile app
- Via API integration, the order is instantly transmitted to the POS terminal (Square, Clover, etc.)
- The system automatically generates a receipt and sends the order to the kitchen
- Customer receives order confirmation and estimated preparation time

Key Technical Advantage: Full compatibility with existing API subsystems

What sets us apart from our competitors?

Customization

We specialize in creating mobile apps and websites featuring distinctive designs and customized technical solutions.

SAAS model

Our services are subscription-based. Our approach involves leveraging out-of-the-box platform solutions augmented by AI tools.

Integration

We seamlessly integrate various databases and microservices into one systems.

Innovative product

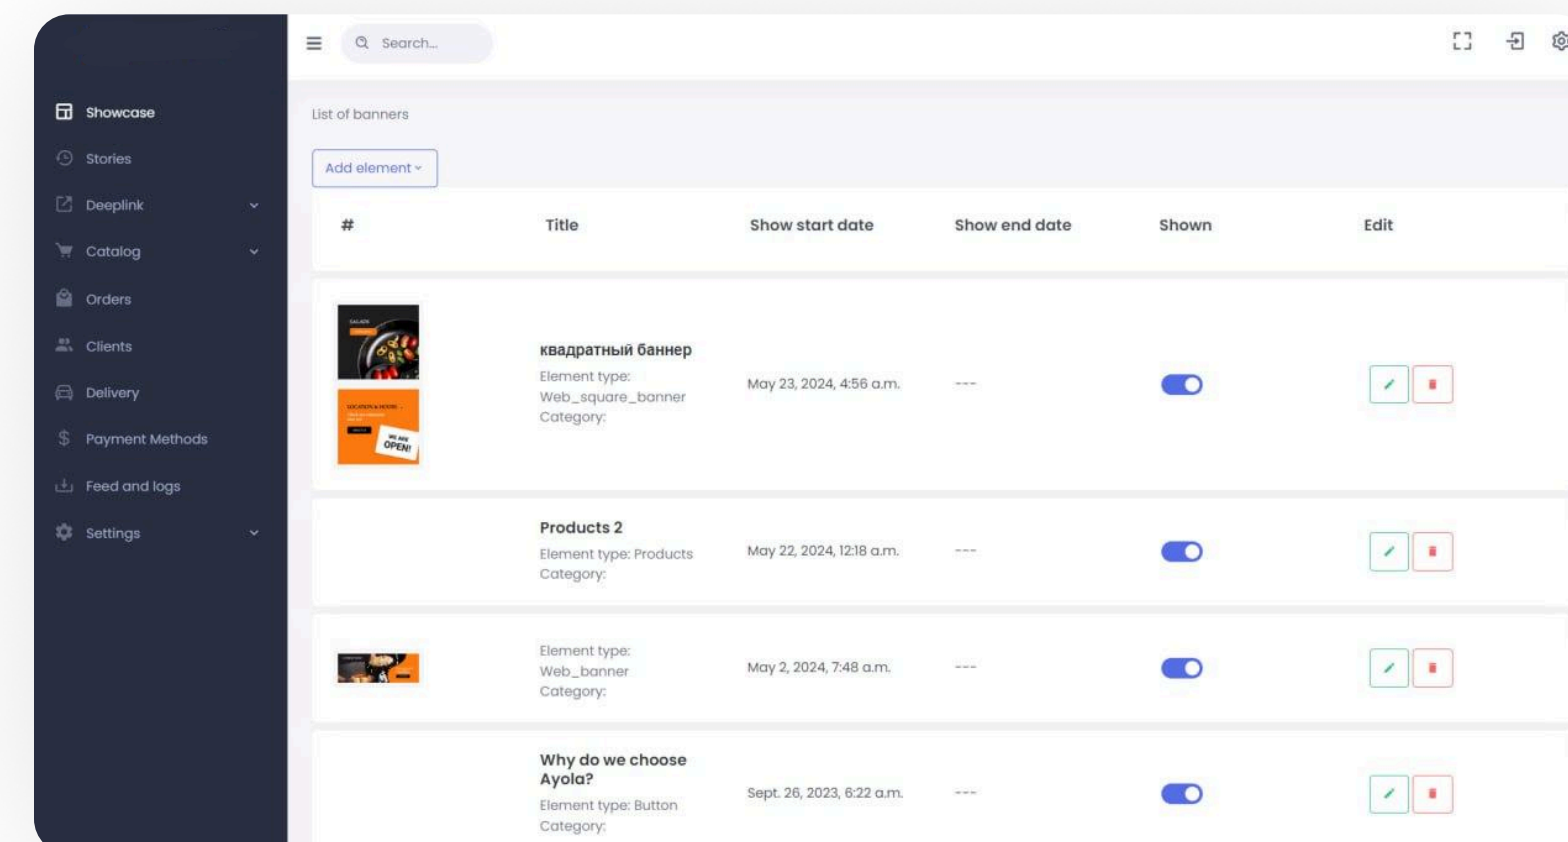

The solution architecture offers limitless development capabilities for future.

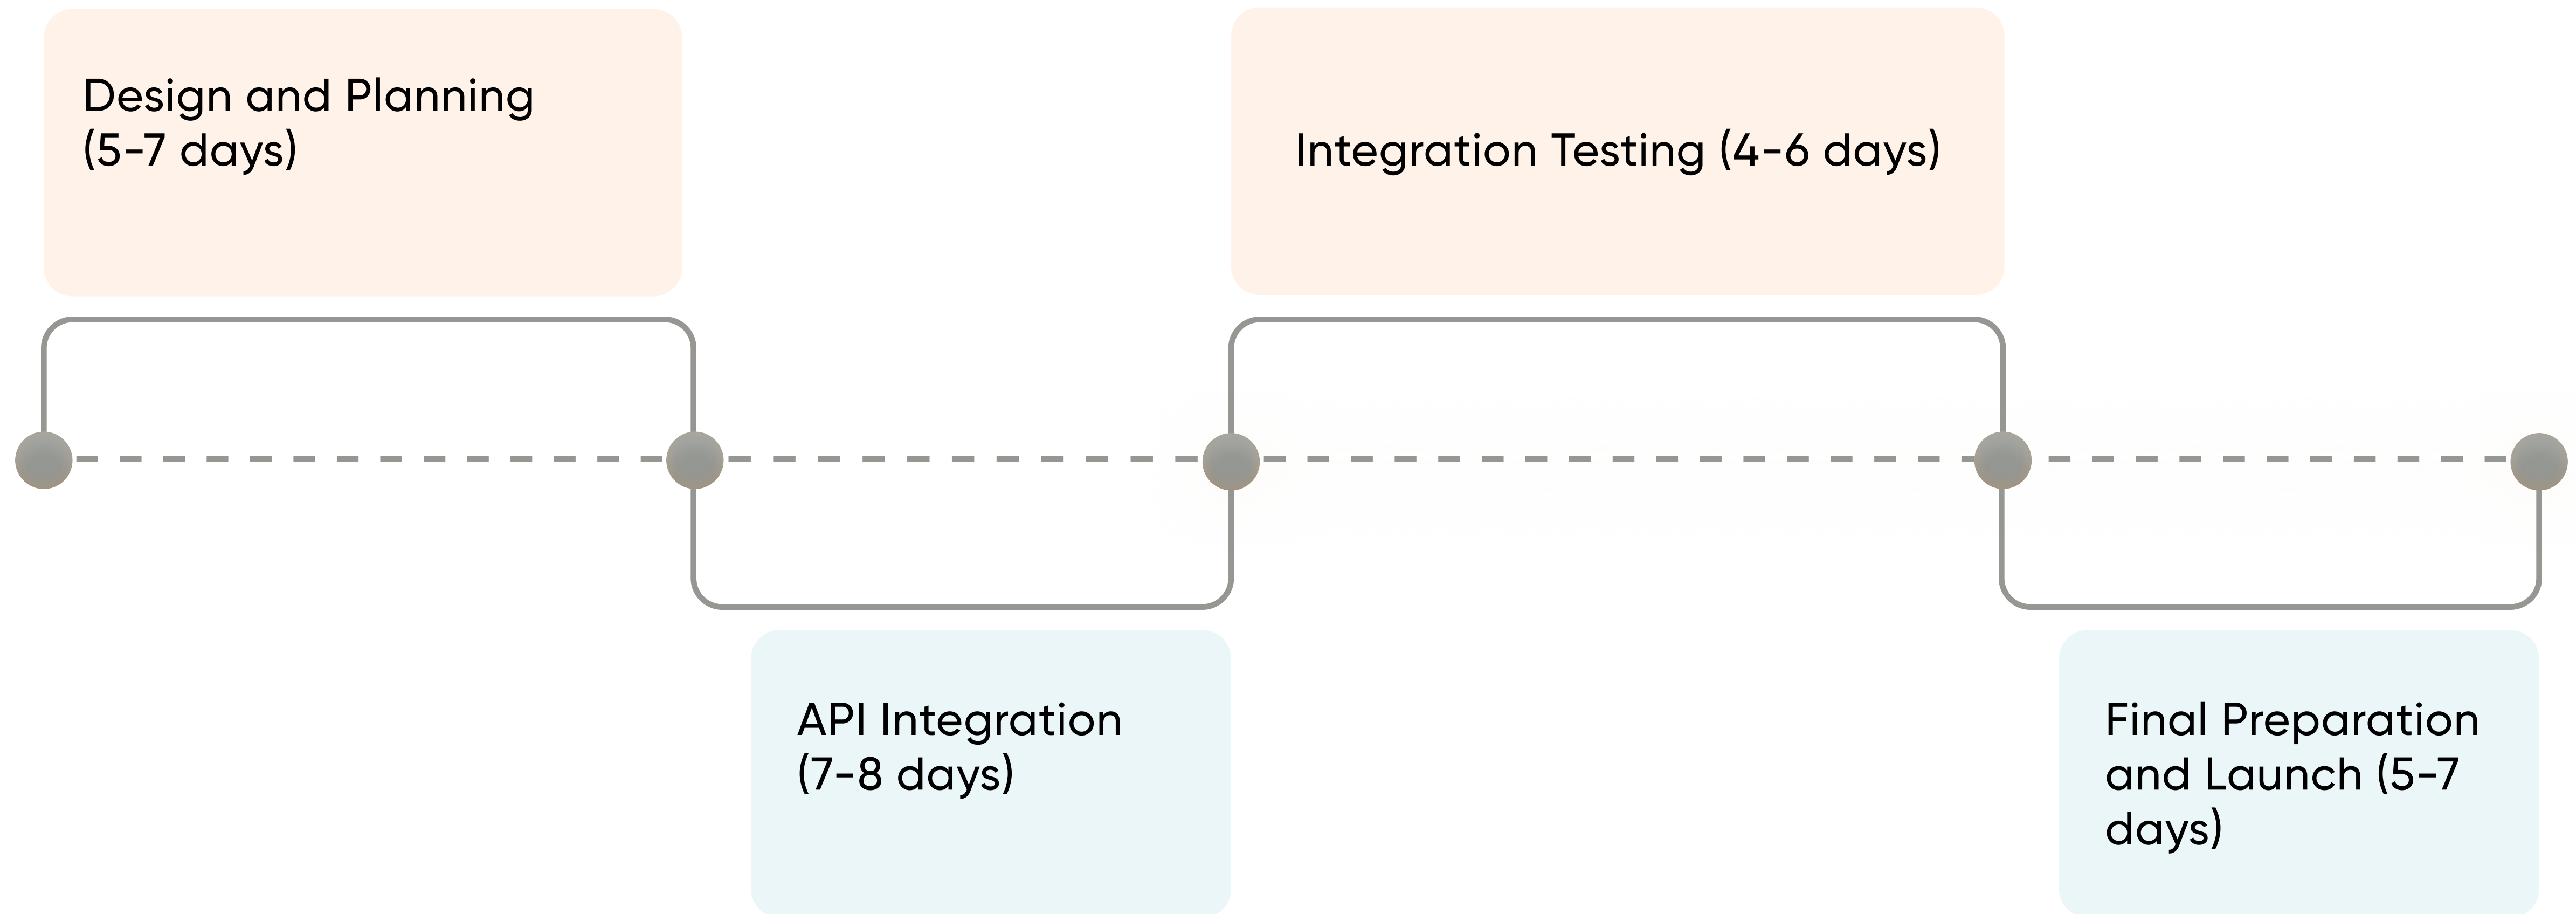

Admin Panel

The Admin Panel offers personalized access for App/Website managers. It includes a range of unique, customizable functions:

- In-App UX/UI management
- Push notification campaign management
- Customization of banners, "to buy" buttons, product headlines, button slider, mini adv slider, stories, and news blocks within the showcase
- Creation and integration of product links, app links, and deep links
- Content management, allowing changes to headings, subheadings, and product descriptions
- Generation of promo codes, QR codes, and clickable buttons to manage orders and purchases
- Product, service, and catalog category management
- Establishment of custom storefronts
- Configuration of Data Analytics Functions
- Setup of delivery and payment methods
- Access to feed and logbook for monitoring activity

Road Map

Road Map

○ Design and Planning (5-7 days)

- Development of user scenarios and business logic for the application
- Creation of adaptive UI/UX matching client's brand identity
- Design concept approval with the client
- Architecture design for POS system integration

○ API Integration (7-8 days)

- Development of interaction modules with POS terminals (Square, Clover)
- Implementation of secure data exchange and authorization
- Integration of payment gateways and loyalty systems
- Creation of menu and pricing data synchronization mechanisms

○ Integration Testing (4-6 days)

- Module and integration testing in a controlled environment
- Verification of order transmission and receipt generation accuracy
- Stress testing under simulated peak load conditions
- Optimization of order processing speed and data synchronization

○ Final Preparation and Launch (5-7 days)

- Comprehensive testing across various devices and environments
- Resolution of identified issues and final optimization
- Preparation of documentation and training materials
- App Store submission and release preparation
