Part 2. Executive Summary *(continued)*

Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.*
- *System components that could impact the security of account data.*

The Company offers infrastructure, networking, computing, storage, container orchestration and security services that enable customers to create their own PCI DSS compliant information infrastructure.

The Company doesn't store, process or transmit account data itself. Therefore, it considers that all customer data can be account data. The Company doesn't access customer data, except for troubleshooting and on a per incident basis with customer permission.

The Company's information infrastructure under review is located in several independent data centers of the PCI DSS compliant co-location service provider Yandex LLC. The information infrastructure in each data center represents an availability zone. Each availability zone is independent segment of the cloud infrastructure and is isolated from hardware and software failures in other availability zones.

The Company's information infrastructure in the scope of the assessment is mostly based on hypervisors, Compute instances and self-developed applications and services described above. Network infrastructure is represented by switches, border routers and VPCs. ACLs and Security Groups are used as firewalls on different layers of ISO/OSI model. Security services like file-integrity monitoring, IAM, log servers, key management services are deployed in this infrastructure on hardware and virtual servers.

All communications from out of scope and from the web application interfaces are performed through secure protocols.

The Company isolates the information infrastructure in the scope of the assessment from its office and other networks.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.

(Refer to the "Segmentation" section of PCI DSS for guidance on segmentation)

Yes No

**Part 2d. In-Scope Locations/Facilities
(ROC Section 4.6)**

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers and mail rooms) in scope for this Assessment.
